RESEARCH REPORT · BANGLADESH · NOVEMBER 2026

What Bangladeshi Muslims want from Islamic websites

Websites they use, what they search for in Bangla, English and Banglish, what they value, what is missing, and what a new Bangladesh-focused Islamic web platform should prioritise.

RESEARCH DATE	5 November 2026
SCOPE	Bangladesh only · web search, websites, Google Play reviews, seasonal demand
EVIDENCE BASE	934 search queries · 16 audited websites · 11,671 app reviews · 5 years of Google Trends
PREPARED FOR	Product team, Daily Islam project

> **Read this first.** Every traffic and search-volume number in this report is a third-party estimate, not first-party analytics. Google Trends figures are relative ratios, not counts. Autocomplete suggestions prove a query exists, not how often it is searched. See "How to read this report".

Contents

How to read this report 5
- What this document is 5
- Who it is for 5
- How the document is organised 5
- Suggested reading paths 5
- The four kinds of evidence, and why they must not be mixed up 6
- How to read a Google Trends ratio: a worked example 6
- How to read a traffic estimate 6
- Confidence levels 6
- What this report does not cover 7

Glossary 8

Executive summary and strategic answers 11
- Executive summary 11
- Final strategic analysis 12
- Prioritized product opportunities 15
- Report index 15
- Data 15
- Key limitations 16

Chapter 1: Bangladesh's Islamic web runs on mobile search 17
- Ninety-one percent of a 170-million nation is Muslim, but only about half is online 17
- Phones carry the traffic, and StatCounter's desktop reading is an outlier 18
- Cheap gigabytes, mid-range speeds and a wide gender gap 18
- Four channels share Islamic attention, and search feeds the dedicated sites 18
- A landscape split by format, by school of thought and by the state's absence 19
- Search interest is shrinking while AI answers and video take the top of the page 20
- Conclusion 21
- Confidence & limitations 21

Chapter 2: Two Bangla portals lead Bangladesh's Islamic web 22
- Methodology: modelled estimates, one ambiguous label, and three tools that disagree 22
- Ranking: Bangla-first sites by estimated Bangladesh visits 23
- Global benchmarks: only upper bounds for Bangladesh 25
- Newspapers as context, not competitors we can measure 25
- Dead domains and moved sites 25
- Per-site profiles 26
- Conclusion 33
- Confidence & limitations 34

Chapter 3: Bangladeshis search Islam in Bangla, by item 35
- Four kinds of evidence, and why they cannot be added together 36
- Demand concentrates in four head families and thousands of named items 36
- Category by category: what people type and where results fail 37
- Seven question templates organise most Q&A demand 40
- Spelling variants: label with the popular form, match every form 41
- Script split: Latin wins surah names, Bangla wins duas 42
- Google demand fell 30–60% from 2023 to 2026, except a few Bangla terms 42
- Noise filters: Dua Lipa, a university portal and Kolkata 42
- Top 50 Islamic search topics in Bangladesh 43
- Top 100 actual Bangla, English and Banglish queries 45
- Confidence and limitations 48

Chapter 4: Users search to act, then verify 49
How to read the tags 49
Quran: reading a specific surah without reading Arabic 50
Hadith: something to share, or a citation to check 50
Dua and zikir: a life situation, often on someone else's behalf 51
Namaz and prayer times: the right minute, for my district, my madhhab 51
Q&A and masala: a private doubt, answered by a named authority 52
Ramadan and Hajj: dates for Bangladesh, minutes for my district 53
Learning: homework, Quran literacy and books 53
Lifestyle: naming a child, posting on Friday, making sense of a dream 54
Worked example: the journey behind "সূরা ইয়াসিন বাংলা উচ্চারণ" 54
What changes across categories, and what does not 55
Confidence and limitations 55

Chapter 5: No Bangla site yet combines breadth and trust 56
How the audit was run 56
Full feature matrix 57
Table stakes versus rare differentiators 60
What each competitor does exceptionally well, and where it fails 60
Search tests: the everyday word fails where the scholarly word works 61
Asr, Hijri and Bangla dates disagree across sites on the same day 62
Offline and PWA support is mostly cosmetic 62
Ads: absent on Islamic sites, heavy on the pages that actually rank 62
Conclusion 63
Confidence & limitations 63

Chapter 6: Bangladeshi users demand local time, sources and dignity 64
Evidence base and how needs are rated 65
Local time is a religious obligation, not a convenience 66
Language: Bangla first, pronunciation essential, spellings plural 67
Money and ads: free access is expected, and ads near the Quran offend 68
Trust: sources, scholars and the madhhab question 68
Device, bandwidth, age and gender 69
Assumed needs the evidence did not support 70
Conclusion 71
Confidence & limitations 71

Chapter 7: Trust, Bangla search and BD dates 72
How the opportunities were scored 72
Opportunity matrix, ranked 73
Scoring rationale 76
Where the gaps cluster: trust, local fit and Bangla language 77
What is deliberately not a gap 77
Confidence and limitations 77

Chapter 8: Ramadan spikes, prayer times never stop 78
How to read the magnitudes 79
The annual calendar: one wave, many spikes 79
Before, during and after: the same three-phase journey every time 80
Inside Ramadan: week 1 for times, the last ten days for fitra 81
Correcting the earlier claim about Shab-e-Barat 81
The weekly and daily cycles 81
Year-round demand: what never switches off 82
Site traffic rises only 1.2–1.9x in Ramadan 82
Serving users year-round: a daily, weekly and annual rhythm 82

Confidence and limitations 83

Chapter 9: Win on trust, Bangla and Bangladesh correctness 85

How the ranking was built, and why it differs from 07 86

Essential for launch 86

Strong next 86

Defer 86

Not supported by evidence 86

Year-round vs seasonal plan 95

Content and trust policy implications 97

Risks and open questions for the product owner 98

Confidence and limitations 98

Chapter 10: How this research was built, and where it breaks 100

Research question, plan and phases 101

Tools used, and what each could and could not do 101

Evidence taxonomy 102

Confidence levels 103

Conflicting evidence 103

Limitations 104

Raw data files 104

How to read this report

What this document is

This is the complete research report on what Bangladeshi Muslims look for in Islamic websites. It covers which sites they visit, what they type into Google, what they praise and complain about, which needs nobody serves well, and how all of this changes through the Islamic year. It was produced on **5 November 2026** to help a product team decide what a new Bangladesh-focused Islamic website should build first, and what it should not build.

It is a **research document, not a design**. It contains no screens, no code and no visual direction. Every recommendation in it is traced back to evidence, and where evidence was thin or missing, the report says so.

Who it is for

The report is written for anyone who has to make product decisions: the product owner, designers, content editors, the SEO and marketing team, developers, and the scholars who will review religious content. You do not need SEO or data-analysis experience to read it. Every technical term is explained in the glossary that follows this section, and every chapter opens with a short box that explains it in plain words.

How the document is organised

Part	Chapters	What it gives you
Executive summary	Summary	The direct answers to the twelve strategic questions, the top topics and queries, and the final ranked list of opportunities. Read this first.
The market	01, 02	How many people are online, how they get there (mostly phones and Google), and which Islamic websites they actually use.
The demand	03, 04	What people type into Google, in Bangla script, English and Banglish, and what they are really trying to do when they search.
The supply	05, 06	What existing websites offer, feature by feature, and which Bangladesh-specific needs the evidence really supports.
The gaps and the timing	07, 08	Where user needs and existing websites do not meet, and how demand rises and falls around Ramadan, Shab-e-Barat, Eid, Hajj and every Friday.
The decisions	09	The prioritised list: what is essential at launch, what comes next, what to defer, and what the evidence does not support.
The method	10	How the research was done, which tools worked or were blocked, every conflict in the evidence, and the full list of sources.

Suggested reading paths

- **10 minutes:** the Executive summary only.
- **Product owner:** Executive summary, then 09 (decisions), then 07 (gaps), then the risks section at the end of 09.
- **Content, SEO and editorial team:** 03 (keywords), 04 (user intent), 08 (seasonal calendar), then the keyword database file.
- **Designers and developers:** 05 (competitor features), 06 (Bangladesh-specific needs), then the "Essential for launch" section of 09.
- **Scholars and religious reviewers:** 04 (trust drivers), 06 (the trust and madhhab sections), and the "Content and trust policy implications" section of 09.
- **Anyone checking a number:** 10 (method and sources). Every important number in the report links to its source.

The four kinds of evidence, and why they must not be mixed up

The most important thing to understand before reading any number in this report is **what kind of number it is**. The research could not access any website's real analytics or Google's own search counts, because those are private or behind paid logins. So it used four kinds of public evidence, each of which means something different.

Label used in the report	What it is	What it can tell you	What it can NOT tell you
Ahrefs range (called `measured_volume` in the data file)	Ahrefs, a commercial SEO tool, estimates monthly searches in Bangladesh and puts each keyword in a bucket: under 100, over 100, over 1,000 or over 10,000 a month.	Roughly how big a keyword is, in real searches per month.	An exact number. These are Ahrefs' own model estimates, not Google's figures. Available only for Quran, Hadith and Dua keywords.
Google Trends ratio (`trends_relative`)	Google Trends shows how popular one search term is compared with another, on a 0–100 scale. The research compared every term against one fixed term, **নামাজের সময়** ("prayer time"), so that all terms share one scale.	Which terms are more or less popular than each other, and how popularity changes over weeks and years.	How many searches there are. A ratio of 2.0x means "twice as popular as prayer time", not "2,000 searches".
Autocomplete suggestion (`observed_suggestion`)	The suggestions Google shows while you type, collected on 5 November 2026 with Bangladesh settings.	That real people type this phrase, and how they phrase it.	How often. A suggestion proves a query exists, nothing more.
Results-page observation (`serp_observation`)	What appeared on Google's results page for a query: which sites ranked, whether there was an AI answer or a YouTube block.	Who currently wins a query and how good the answers are.	Search volume. And these pages may be personalised (see chapter 10).

Two further kinds of evidence appear in the user and competitor chapters:

- **User feedback**: real Google Play reviews, quoted word for word, with the app, date and star rating. Bangla quotes are kept in Bangla script with an English translation.
- **Audit observation**: something the research team saw directly on a website on 5 November 2026, with the page address recorded.

Throughout the report, statements are also tagged as **Measured** (from one of the data sources above), **Observed** (seen directly in reviews, search results or on websites) or **Inferred** (the analyst's reasoning from the evidence). Inferred statements are judgements, and the report always labels them so.

How to read a Google Trends ratio: a worked example

Suppose the report says **দোয়া (dua) = 2.50x**. This means: in a typical week over the last five years, Bangladeshi Google interest in the word দোয়া was about two and a half times the interest in নামাজের সময় (prayer time) in its typical week.

It does **not** mean 2.5 million searches, or 2,500 searches. Google Trends never reveals counts. The ratio is only useful for comparing one term with another, or one week with another. When the report says Ramadan week 1 is "about 40x the off-season level" for রমজান, it means interest that week was about forty times higher than in an ordinary week outside Ramadan, again with no absolute count.

How to read a traffic estimate

Traffic numbers for websites (for example, "muslimbangla.com: ~905K Bangladesh visits a month") come from Similarweb and Ahrefs, two commercial tools that **model** traffic from panels and clickstream data. They are not the websites' own figures. The two tools often disagree by two to three times for the same site. The report therefore treats the **order** of sites (who is bigger than whom) as reliable, and the **exact numbers** as rough.

"Bangladesh visits" are calculated as: total visits worldwide × the share that comes from Bangladesh. For global sites such as quran.com, Bangladesh is not in the tool's top-five-countries list, so only an upper limit can be calculated.

Confidence levels

Each major finding carries a confidence level:

- **High**: several independent sources agree, or the evidence was observed directly.

- **Medium**: one good source, or several sources that broadly agree with some conflict.
- **Low**: a single weak source, an estimate built on assumptions, or sources that conflict.

What this report does not cover

- **Facebook, YouTube, TikTok and WhatsApp behaviour.** These platforms could not be measured with the tools available. Much Islamic content in Bangladesh (waz, captions, short videos) lives there, so demand for some topics is probably higher than Google data shows.
- **Exact search volumes** for most topics, because Google Keyword Planner and Semrush require paid logins.
- **Real retention data** (how often users come back). Return behaviour is inferred from reviews and search patterns.
- **Interviews or surveys with users.** All user voice comes from public reviews.

BEFORE YOU START

Glossary

This glossary explains every technical, data, SEO and religious term used in the report. Terms are grouped by type.

Data and research terms

Term	Meaning
Ahrefs	A commercial SEO tool. Its free pages give estimated search traffic for websites and estimated search-volume ranges for keywords in a chosen country.
Anchor term	The fixed reference term used to put all Google Trends results on one scale. In this report it is **নামাজের সময়** (prayer time), set to 1.0x.
Anchor median	The anchor term's popularity in a typical (median) week. Ratios like "2.50x anchor-median" compare a term with that typical week.
Autocomplete	The suggestions Google shows as you type. Used here to discover the real phrasing of searches.
BD	Short for Bangladesh.
BD share	The percentage of a website's visits that come from Bangladesh.
Bounce rate	The share of visitors who leave after viewing one page.
BTRC	Bangladesh Telecommunication Regulatory Commission, the telecoms regulator. It publishes internet subscription counts. These count SIM cards and accounts, not people, so they are higher than the number of actual users.
BBS	Bangladesh Bureau of Statistics, which ran the 2022 census.
DataReportal / Kepios	A widely used annual digital-statistics report. It estimates unique internet users (people), which is why its figure (82.8M) is lower than BTRC's subscription count (135.94M).
Evidence type	A column in the keyword database that says what kind of evidence backs each keyword: Ahrefs range, Trends ratio, autocomplete suggestion or results-page observation.
Implied BD visits	A calculated figure: total visits × Bangladesh share. It inherits all the uncertainty of the underlying estimate.
Organic search	Visitors who arrive by clicking an unpaid Google (or other search engine) result.
Similarweb	A commercial tool that estimates website traffic, traffic sources and country share. Its free pages show limited data.
StatCounter	A tool that measures the share of desktop versus mobile browsing. Its Bangladesh figure (56% desktop) conflicts with all other evidence and is treated as unreliable.
Trends ratio	A term's Google Trends popularity divided by the anchor term's. Relative only; never a count.
Upper bound	The highest a number could possibly be, used when the exact number is unknown.

SEO and web terms

Term	Meaning
AI answer (AI Overview)	The AI-written summary Google now shows at the top of many results pages. It answers the question before the user clicks any website, which can reduce clicks.
Head term	A short, very popular search, such as "দোয়া" (dua).
Long-tail query	A longer, more specific search, such as "ঘুমানোর আগে কি কি দোয়া পড়তে হয়" (which duas to read before sleeping). Each is small, but together they make up most of the demand.
KD (keyword difficulty)	Ahrefs' estimate of how hard it is to reach Google's first page for a keyword. "Easy" means the current top results are weak and a new site could compete.
Navigational / informational / transactional intent	Whether the searcher wants a specific site, wants information, or wants to do something (calculate, download, register).
PageSpeed	Google's tool for measuring how fast a page loads on mobile. It was blocked (rate-limited) during this research.
PWA (progressive web app)	A website that can be installed on a phone like an app and work offline. It needs a "manifest" file and a "service worker" script. Only two of the audited sites are real PWAs.

Term	Meaning
SERP	Search engine results page: the page Google shows after you search.
SERP feature	Anything on a results page other than plain links: AI answers, video blocks, "People also ask" boxes.

Language and script terms

Term	Meaning
Bangla script	Bangla written in its own alphabet, for example নামাজ.
Banglish (Romanised Bangla)	Bangla typed in English letters, for example "namaz er niyom" or "namajer somoy". Common on phones.
উচ্চারণ (uccharon)	Pronunciation. In Islamic content it means Arabic text written out in Bangla letters so people who cannot read Arabic script can recite it. This is one of the most-requested features.
Transliteration	Writing one script's sounds in another script. Latin transliteration (as on quran.com) is different from Bangla-script উচ্চারণ, which is what Bangladeshi users ask for.
Spelling variants	The same word spelled differently, for example দোয়া / দুয়া / দুআ (dua), কুরআন / কোরআন (Quran), নামাজ / নামায (namaz). Users search mostly with one popular form, but a good site must recognise all of them.
Unicode / Bijoy	Unicode is the modern standard for Bangla text on computers. Bijoy is an older, non-standard encoding. The research found no current complaints about Bijoy-related display problems.

Islamic and Bangladesh-specific terms

Term	Meaning
Ahl-e-Hadith / Salafi	A school of thought that follows hadith directly rather than one of the four classical madhhabs. A minority in Bangladesh, with its own websites and publications (for example at-tahreek.com).
Amal / Fazilat	Recommended deeds for an occasion / the virtues or rewards of an act. Very common in occasion-related searches.
Asr (Hanafi vs Shafi'i)	The afternoon prayer. Its start time differs by school: the Hanafi time (used by most Bangladeshis) is later, the Shafi'i/standard time earlier. On 5 November 2026 the two differed by about 47 minutes on Bangladeshi sites.
Deobandi / Hanafi	The majority religious orientation in Bangladesh. The Hanafi madhhab is the legal school; Deobandi is the scholarly tradition behind many Bangladeshi madrasas and websites such as alkawsar.com.
Dua / Zikir (dhikr)	Supplication / remembrance of Allah through repeated phrases.
Fatwa / Masala (masala)	A religious ruling / a practical religious question and its answer.
Fitra (Sadaqatul Fitr)	The charity paid before Eid-ul-Fitr. Its amount is announced each year in Bangladesh, which drives searches like "ফিতরা কত টাকা ২০২৬".
Hadith grading	The authenticity rating of a hadith (sahih = authentic, hasan = good, da'if = weak, mawdu' = fabricated). Users increasingly look for it.
Hifz	Memorising the Quran.
Hijri date	The Islamic lunar calendar date. In Bangladesh it follows the National Moon Sighting Committee, which often puts Bangladesh one day behind Saudi Arabia.
IF (Islamic Foundation Bangladesh)	The government religious body. It publishes the official prayer and Sehri/Iftar timetables for each district, which users treat as the reference.
Ijtema (Bishwa Ijtema)	The large annual Muslim gathering at Tongi near Dhaka.
Khatam	Completing a full reading of the Quran.
Madhhab	A school of Islamic law (Hanafi, Shafi'i, Maliki, Hanbali). It affects prayer times and many rulings.
National Moon Sighting Committee	The Bangladesh body that officially decides the start of each Hijri month, and so the dates of Ramadan, Eid and other occasions.
Niyat	The intention for a prayer or fast, often searched with the exact words to say.
Qibla	The direction of the Kaaba in Mecca, faced during prayer.
Qurbani / Kurbani	The animal sacrifice of Eid-ul-Adha.

Term	Meaning
Ruqyah	Recitation of Quran and duas for spiritual healing (against evil eye, jinn and similar).
Sehri / Iftar	The pre-dawn meal before a fast / the meal that breaks the fast at sunset. Their exact times by district are among the most searched items in Ramadan.
Shab-e-Barat	The 15th night of Sha'ban. Widely observed in Bangladesh; it produces one of the biggest single-night search spikes of the year.
Shab-e-Meraj	The night commemorating the Prophet's night journey (27 Rajab).
Shab-e-Qadr (Laylatul Qadr)	The Night of Power in the last ten nights of Ramadan, commonly observed on the 27th night.
Tafsir	Commentary and explanation of the Quran (for example Ibn Kathir, Ahsanul Bayan, Fathul Majid).
Tasbih	Counting zikir, traditionally on prayer beads. In searches, "তাসবিহ" mostly refers to phrases said in prayer, not to a digital counter.
Upazila	A sub-district. Some users want prayer times at upazila level, not just district level.
Waz / Gojol (gazal)	Islamic sermons / Islamic songs. Popular on YouTube and Facebook.
Zakat / Faraid (mirath)	The obligatory annual alms / the Islamic rules for dividing inheritance. Both need calculators and are poorly served today.

EXECUTIVE SUMMARY

Executive summary and strategic answers

ABOUT THIS CHAPTER

In plain words. This is the whole report on a few pages. It answers the twelve strategic questions directly: which Islamic websites Bangladeshis use, what they search for, what they want and dislike, what is missing, and what a new site should do first.

The single most important takeaway. Bangladeshi users are not short of Islamic content; they are short of **content they can trust and use in their own language and local context**. The winning website will be the one that gets the basics exactly right: correct Bangla pronunciation, cited sources, prayer times and dates that match Bangladesh's official bodies, and search that understands how people really type.

How to use this section. Read it first. Every answer links to the chapter that holds its evidence, so you can check any claim. The ranked list of opportunities at the end is the short version of chapter 09.

Watch out for. The "top 50" and "top 100" lists combine different kinds of evidence (Trends ratios, Ahrefs ranges, autocomplete). They are a reliable guide to order, not a table of exact search volumes.

This report asks what Bangladeshi Muslims want from Islamic websites: which sites they use, what they search for, which features they value, which problems remain unsolved, and what a new Bangladesh-focused Islamic web platform should prioritise. It covers Google search demand in Bangla script, English and Banglish (Bangla typed in Latin letters), traffic estimates for the leading sites, a feature audit of 14 Islamic sites, 11,671 Google Play reviews from the Bangladesh storefront, and five years of seasonal search data. It is research for a product team; it does not design screens or write code. **Research date: 5 November 2026.**

Headline caveat. Every traffic and volume number here is a **third-party estimate** (Similarweb, Ahrefs, Semrush), never first-party analytics or a Google count. Google Trends figures are **relative** ratios to the anchor "নামাজের সময়" (prayer time), not volumes. Autocomplete suggestions show that a query **exists**, not how often it is searched. Evidence labels (measured / observed / inferred) are kept as in the underlying reports. See 10.

Executive summary

- **Two Bangla portals lead.** muslimbangla.com (~905K) and hadithbd.com (~601K) draw the most estimated Bangladesh visits a month (Similarweb, Sept 2026); every other Bangla Islamic site is at least 3x smaller. Rank order is reliable; tools disagree on volume by 2–3x (02).
- **Search is the engine, and it is mobile.** Organic search brings 48–66% of desktop visits to most dedicated sites, and about 89% of internet subscriptions are mobile (01).
- **Dua, dreams, hadith and prayer times are the biggest search families.** On Trends, দোয়া (dua) averages 2.50x the prayer-time anchor's median week; স্বপ্নে (dream meanings) is 1.32x and rising (03).
- **The largest measured volumes are single named items with low difficulty.** Twelve surah, ayah and dua keywords sit in Ahrefs' >10,000-a-month bucket for Bangladesh, all rated KD "Easy" (03).
- **Users search to act, then verify.** They want Arabic, Bangla-script pronunciation (উচ্চারণ), Bangla meaning and audio together. They trust named sources and grades, and they leave over ads, paywalls, wrong times and text errors (04).
- **The strongest needs are correctness obligations:** Islamic Foundation (IF)-matched district times, a Hijri date that follows Bangladesh's moon sighting, verse-accurate pronunciation, visible references, and no ads beside sacred text (06).
- **No Bangla site combines breadth and trust, so the biggest gaps are trust and local fit, not missing topics.** muslimbangla is broad but its duas are unsourced; hadithbd is sourced but has no prayer times; quran.com's search returns 0 for নামাজ; no site cites the Moon Sighting Committee (05; 07).
- **Demand has a daily, weekly and annual rhythm.** Prayer times and dua never switch off; Friday lifts some terms 25–60x; Ramadan week 1 runs about 40x its off-season level. Q1 2027 packs four occasions into about six weeks (08).
- **Google search for core Islamic terms fell 30–60% from 2023 to 2026**, and AI answers appeared on all 6 sampled Google pages. The cause is not measured (03).

- **Ten opportunities are essential for launch**, led by Bangla-aware search, proofread উচ্চারণ pages, sourced duas, IF-matched times and a cited BD Hijri date (09).

Final strategic analysis

1. Which Islamic websites are most popular among Bangladeshi users?

Tier 1: muslimbangla.com (~905K implied BD visits a month; BD rank #460) and hadithbd.com (~601K; #478). **Tier 2** (~100–360K): salat.habibur.com (~364K, low confidence, desktop-only geography), alqurans.com (~213K), alkawsar.com (~174K) and ihadis.com (~97K in Similarweb, which conflicts with Ahrefs). quran.com could be the most-used site in Bangladesh, but only an upper bound exists (below ~1.14M BD visits). Newspapers are far larger overall (prothomalo.com ~20.0M BD visits, #10 in Bangladesh), but their religion-section traffic is unmeasured. YouTube appears in 9 of 16 sampled Bing-BD results pages. Apps are the habit layer. Sources: 02, 01.

2. What are the top 50 Islamic search topics in Bangladesh?

The full ranked list is in 03 § Top 50 topics. It mixes evidence types (Trends ratio first, then Ahrefs bucket, then observed-only), so it is an **ordinal guide, not a volume ranking**. Seasonal topics are ranked by 52-week means, which understate their peaks. Topics 45–50 (short-surah bundles, hadith collections, Hajj packages, finance, faraid, hifz) rank low on measured signal but reappear in the gap analysis. The top 15:

#	Topic	Strongest signal
1	Dua (general and situational)	Trends 2.50x anchor-median (5-yr mean)
2	Dream interpretation	Trends 1.32x, rising
3	Hadith (head term, short shareable hadith)	Trends 1.13x; Ahrefs >1,000
4	Prayer times (Bangla and Banglish, by district)	Trends 1.00x + 1.06x + 0.23x
5	Quran (general, translation, sharif)	Trends 0.62x anchor-median; Ahrefs >1,000
6	Islamic baby names	Trends 0.52x
7	Sehri and iftar times	Trends 0.34x / 0.33x (Ramadan only)
8	Halal/haram/permissibility rulings	Trends 0.30–0.31x (generic words)
9	Ayatul Kursi	Ahrefs >10,000; Trends 0.29x
10	How to pray (rules of salah)	Trends 0.26x
11	Divorce (talaq)	Trends 0.23x
12	Surah Mulk	Ahrefs >10,000; Trends 0.21x
13	Salah niyat	Trends 0.19x
14	Shab-e-Barat	Trends 0.18x (peak 6.3x anchor-median)
15	Tahajjud	Trends 0.16x

3. What are the top 100 actual Bangla, English and Banglish search queries?

All 100 are real rows from the keyword database, as typed: 03 § Top 100 queries. The list has 74 Bangla-script, 16 English and 10 Banglish queries. By evidence it has 48 Trends rows, 41 Ahrefs rows, 8 observed suggestions and 3 results-page rows. Positions 93–100 were added deliberately to represent Banglish and English utility queries. **It is not a volume ranking.** The top 20:

#	Query	Gloss	Language	Signal
1	দোয়া	dua	Bangla	Trends 2.50x anchor-median
2	স্বপ্নে	"in a dream..."	Bangla	Trends 1.32x
3	হাদিস	hadith	Bangla	Trends 1.13x; Ahrefs >1,000
4	namaz time	—	Banglish	Trends 1.06x
5	নামাজের সময়	prayer time	Bangla	Trends 1.00x (anchor)
6	কুরআন	Quran	Bangla	Ahrefs >1,000; Trends 0.62x anchor-median

#	Query	Gloss	Language	Signal
7	quran	—	English	Trends ~1.9x কুরআন in the same set
8	dua	—	English	Trends ~0.51x দোয়া

4. What do Bangladeshi users primarily visit Islamic websites to accomplish?

They visit to act. The main tasks are reciting a specific surah or dua correctly without reading Arabic; finding today's prayer, sehri or iftar time for their district; checking whether something is allowed, a sin or valid; finding a hadith or caption to post; learning when an occasion falls *in Bangladesh* and what to do; naming a child; and making sense of a dream. Queries name the object plus a format ("... বাংলা উচ্চারণ", Bangla pronunciation; "অর্থসহ", with meaning; "pdf"), a ruling word ("কি জায়েজ", is it permissible?) or a year ("কত টাকা ২০২৬", how much in taka, 2026). The head term "কুরআন" also brings students looking up Quran-board results: a separate audience. Sources: 04, 03.

5. Which Islamic content categories have the strongest demand?

Year-round: **dua** (2.50x anchor-median, never zero in five years), **dream interpretation** (1.32x), **hadith** (1.13x, much of it homework), **prayer times** (1.00x Bangla + 1.06x Banglish), **Quran** (0.62x anchor-median, with single surahs such as Mulk, Kahf, Rahman and Yasin in Ahrefs' top buckets) and **Islamic names** (0.52x). Seasonal: **Ramadan utilities** (sehri and iftar 0.34x and 0.33x as 52-week means, all in Ramadan) and **Shab-e-Barat** (peak 6.3x). Q&A ruling words (হারাম, জায়েজ, তালাক) sit at 0.23–0.31x but include non-religious use. Sources: 03, 08.

6. Which features do users repeatedly need?

Arabic, proofread Bangla উচ্চারণ and Bangla meaning side by side, with audio to check pronunciation by ear; IF-matched district prayer times that meet Hanafi expectations; a Hijri date that follows Bangladesh's moon sighting; visible references, named grades and named translators; need-based duas with "how many times" and "when"; BD dates and countdowns for occasions; large, adjustable fonts; spelling-tolerant search; shareable text that keeps its reference; print or PDF versions; and a way to ask a named scholar. Sources: 04, 06; most of this evidence comes from app reviews.

7. What are users dissatisfied with in existing websites?

Most of this evidence comes from **app** reviews, not website users.

- **Ads** are the top complaint: 551 reviews, 349 at 3★ or lower. Users frame them as religiously impermissible.
- **Paywalls** draw 185 mentions, 116 at 3★ or lower.
- **Alarms and notifications** draw 263 reviews. Only 25 complain of wrong prayer times, but those turn on minutes.
- **Text errors** draw 86 reviews, 37 at 3★ or lower, reported verse by verse.
- **Other complaints:** missing Bangla pronunciation, small fonts, wrong Hijri dates, nagging donation prompts, and being made to pick a madhhab.

On the web specifically, the audit and results pages show further failures. Search fails on the everyday word নামাজ. Unlabelled Hanafi and Ahl-e-Hadith rulings sit side by side. Unsourced duas sit on the largest portal. Ad-heavy caption sites with no Arabic win topic-hadith queries. Sources: 06, 04, 05.

8. Which important needs are not adequately served?

Ranked in 07: Bangla-aware search (synonyms, Banglish, typos); Bangla-script pronunciation on the web (only muslimbangla has it); occasion pages with BD dates; graded topic-hadith pages; a Hijri date citing the BD Moon Sighting Committee (absent everywhere); myth-checks of viral claims (nobody does them); sourced need-based duas; careful dream interpretation; public corrections; both Asr times labelled (only salat.habibur); madhhab-labelled Q&A; private women's fiqh; BD-context finance; and BD-unit zakat and BD-law faraid tools that rank.

9. What should a new Bangladesh-focused Islamic website prioritize?

Correctness and trust before breadth. The research supports launching with ten items:

1. Bangla-aware search and labelling.
2. Canonical surah, ayah and dua pages with proofread উচ্চারণ and audio.
3. Sourced, need-based duas.
4. IF-matched district prayer times with both Asr times labelled.
5. A cited BD Hijri date.
6. An occasion engine ready for Q1 2027.
7. Graded topic-hadith hubs.
8. A public corrections process.
9. Named provenance on every item.
10. Friday content.

The launch also has to meet the evidenced quality constraints: no ads or paywall on sacred text, light text-first pages, large fonts, no GPS requirement, and no nagging. Source: 09.

10. What would make users return every day?

[Inferred from search timing and reviews; there is no retention data.]

- **Daily:** prayer times (searched every week for five years; peaking 04:00–06:00 in earlier research) with today's BD Hijri date.
- **Daily:** a small dua or Quran portion with audio, matching the dua peak at 05:00–06:00 and reviewers' khatam habits; morning and evening adhkar (Ahrefs >1,000).
- **Weekly:** Friday content (Surah Kahf about 25–45x on Fridays).
- **Every one to two months:** an occasion.

Notifications cut both ways. A daily-hadith push is not evidenced as a return driver. Sources: 08, 04.

11. What could make the website more useful than existing alternatives?

The opening is combining what incumbents each do separately: muslimbangla's breadth, hadithbd's sourcing, quran.com's named translations, muslimbangla's উচ্চারণ and salat.habibur's both-Asr transparency (05). The site would add what nobody does: spelling-tolerant search, a cited moon-sighting date, graded topic hadith, and a public corrections log. Because Google is answering more text queries directly, the durable advantage is value an AI box cannot easily replace **[Inferred]**: verified and corrected text, audio-checked pronunciation, local utilities and routines (01).

12. Which features should be considered essential, and which should be deferred?

- **Essential:** the ten launch items in Q9.
- **Strong next:** myth-checks, dream interpretation, madhhab-labelled Q&A, a zakat calculator due by early February 2027, names and captions, women's fiqh content, finance explainers and ruqyah safety.
- **Defer:** an offline web app, audio-first destinations, a faraid calculator, a children's section, a hifz tool and a licensed book library.

- **Not supported by evidence:** accounts and login, a madhhab picker, women-specific tools, web azan alarms, a daily-hadith push, a tasbih counter as a destination, Bijoy rendering fixes, desktop-first design, and "ad-free" as a differentiator.

Source: 09.

Prioritized product opportunities

Short form of 09. Its "07 rank" column shows where each item started in 07 and why it moved.

Rank	Opportunity	Class
1	Bangla-aware search and spelling layer	Essential
2	Canonical surah, ayah and dua pages: Arabic, proofread উচ্চারণ, named translation, audio	Essential
3	Sourced, need-based dua pages	Essential
4	IF-matched district prayer times, both Asr labelled	Essential
5	BD Hijri date with a cited moon-sighting source	Essential
6	Occasion engine (about 10 occasions, BD dates; ready for Q1 2027)	Essential
7	Topic-hadith hubs with grade and reference	Essential
8	Report-an-error and public corrections log	Essential
9	Named translator, grader and edition on every item	Essential
10	Friday weekly content	Essential
11	Myth-check section	Strong next
12	Dream interpretation, sourced and carefully framed	Strong next
13	Madhhab-labelled answer pages	Strong next
14	Zakat calculator (BD units) and IF fitra amount, by early Feb 2027	Strong next
15	Names with verified meanings; sourced captions	Strong next
16	Women's fiqh pages	Strong next
17	BD-context finance explainers	Strong next
18	Ruqyah safety pages	Strong next
19–24	Offline PWA; audio-first destinations; faraid; children's section; hifz; licensed books	Defer
25	Tasbih counter as a destination	Not supported (attachment only)

Data

data/keyword-database.csv has 934 rows, 920 distinct keyword strings, and these columns: `keyword, language, intent, search_volume, keyword_difficulty, competition, trend, seasonality, user_need, content_opportunity, data_source, evidence_type, category, subcategory`. Languages are Bangla 759, English 83, Banglish 66 and Mixed 26. Categories are A–H plus X (new topics). The merge deduplicated rows on keyword + category; no exact duplicates existed, so all 934 rows were kept. **14 keywords intentionally appear in two categories** (দোয়া, for example, under Dua and under New topics), because each row carries a different user need.

`evidence_type` has four values:

Value	Rows	Meaning
`measured_volume`	136	An Ahrefs **modelled** monthly bucket for BD (<100 / >100 / >1,000 / >10,000), with KD for about 100 rows. Not a Google figure, despite the label. All 136 are in Quran, Hadith and Dua/Zikir.
`trends_relative`	157	A Google Trends ratio to the prayer-time anchor. Relative, exact-phrase only.
`observed_suggestion`	594	A Google or YouTube autocomplete suggestion (gl=bd, 5 Nov 2026). The query exists; no volume.
`serp_observation`	47	Who ranked and what the results page showed. Not a rank audit; Bing is a proxy.

data/raw/ holds four subfolders:

- `play-reviews/`: `reviews.json`, 11,671 reviews of 22 apps, keyed by package name, with app metadata. **Handle as personal data.** It has no reviewer-name field, but it holds verbatim public review text, review IDs and developer replies, and some replies address reviewers by name. Do not republish it wholesale.
- `seasonal-trends/`: 5-year weekly and 90-day daily Trends pulls with their term groupings.
- `keywords-quran-hadith-dua/`: autocomplete for 267 seeds, Trends sets, and YouTube autocomplete.
- `keywords-namaz-qa-etc/`: autocomplete for 712 seeds, Trends 12-month sets (including logged HTTP 429 failures), and DuckDuckGo/Bing attempts.

Raw research notes live in ../../research_notes/Bangladesh Islamic web search demand/.

Key limitations

- No exact search volumes, no first-party analytics, and no retention data for any BD Islamic product.
- User voice is almost all Google Play **app** reviews: not a random sample, reviewer location unverified, and website-only users absent.
- Facebook, YouTube comments and Reddit were unreachable, as were Keyword Planner and Semrush keyword data.
- Google results pages are a few dozen one-day snapshots; 34 came from a signed-in session and may be personalised.
- The IF's prayer-time method is unverified, and the ±9-minute offset question is unresolved.
- All 2027 Islamic dates except Ijtema and the Hajj roadmap are estimates.
- Opportunity scores are analyst judgements.

Full detail and the conflict log: 10-research-methodology-and-sources.md.

CHAPTER 1

Bangladesh's Islamic web runs on mobile search

ABOUT THIS CHAPTER

In plain words. This chapter describes the playing field: how many Bangladeshis are Muslim and online, what devices they use, how much data costs, and through which channels (websites, newspapers, YouTube and Facebook, apps) they find Islamic content.

Key takeaway. About 91% of Bangladesh is Muslim, but only about half the country is online, and access is overwhelmingly through mobile phones. Google search is the main road into dedicated Islamic websites. At the same time, Google interest in core Islamic terms fell 30–60% between 2023 and 2026, while Google's own AI answers and YouTube videos now sit at the top of the results page.

Why it matters for the product. It means the site must be built for phones and for search first. It also warns that relying on Google alone is getting riskier, because fewer people may click through to websites.

Terms you will meet. BTRC, DataReportal, StatCounter, organic search, AI answer, Hanafi/Deobandi, Ahl-e-Hadith (see Glossary).

Watch out for. Two "internet user" numbers appear (82.8M people vs 135.94M subscriptions). They measure different things and are both correct. StatCounter's desktop-majority figure is treated as unreliable.

Key findings

- **The audience is large but harder to count than it looks.** About 91% of Bangladesh's ~170–176M people are Muslim (BBS Census 2022). Unique internet users are **82.8M** (DataReportal/Kepios, end-2025), while BTRC counts **135.94M internet subscriptions** (June 2026). The first counts people, the second counts SIMs and accounts. A rough Muslim online audience of **~75M people** is an estimate (91% × 82.8M), not a sourced figure.
- **Access is mobile.** About **89% of internet subscriptions are mobile** (BTRC), and Android is about 91% of mobile OS share. StatCounter shows a desktop majority (56.04%) for October 2026. That figure conflicts with every other signal, so we treat it as an artefact of StatCounter's sample.
- **Data is cheap per GB but not free, and connections are mid-speed.** Retail mobile data costs about **BDT 25–35 per GB**, and median mobile download speed is **36.84 Mbps** (Ookla via DataReportal). There is a large **gender gap**: 40% of men and 24% of women use mobile internet (GSMA 2024).
- **Islamic content reaches Bangladeshi users through four channels at once:** dedicated Bangla Islamic sites, the Islam sections of national newspapers, YouTube and Facebook, and apps. Dedicated sites get **48–66% of their desktop visits from organic search**. YouTube appears in **9 of 16** sampled Bing-BD results pages, and Facebook appears in most fiqh results pages.
- **The landscape splits by school of thought as well as by format.** Hanafi/Deobandi-leaning sites (alkawsar.com, muslimbangla.com) and Ahl-e-Hadith/Salafi-leaning sites (at-tahreek.com, tawheederdak, IRD's ihadis.com, hadithbd.com's audience cluster) compete for the same queries. The government sites (Islamic Foundation, quran.gov.bd) barely function as products.
- **Google search interest in core Islamic terms fell 30–60% from 2023 to 2026.** For example, the prayer-time anchor term fell 34% and আয়াতুল কুরসি (Ayatul Kursi) fell 57%. Meanwhile every sampled Google results page showed an **AI-generated answer** (6/6), and 5 of 6 showed a **YouTube video block**. Two things are inferred, not measured: the cause of the decline, and whether demand is moving to AI answers, video and apps.

Ninety-one percent of a 170-million nation is Muslim, but only about half is online

Bangladesh's 2022 census found **91.04% Muslim** in the preliminary report and **91.08%** in the final national report. The rest were Hindu 7.96%, Buddhist 0.61%, Christian 0.30% and others 0.06%. Applied to the post-enumeration adjusted total of about 169.8M, that is roughly **154.5M (15.45 crore) Muslims** (TBS News; Daily Star; Wikipedia – 2022 Bangladeshi census). DataReportal uses the UN estimate of **176M people** (October 2025) (DataReportal). The difference between 169.8M and 176M is a difference between sources and dates, not an error.

Internet reach depends heavily on what is counted. **DataReportal/Kepios counts 82.8M unique internet users (47.0% penetration)** at the end of 2025, up 5.3M (+6.9%) in a year. That leaves **93.4M people (53.0%) offline**, and there are 64.0M social-media user identities. Kepios itself warns that data lags may make the user figures too low (DataReportal). The regulator BTRC reports **135.94M internet subscriptions in June 2026**: 120.84M mobile internet and 15.10M broadband (ISP+PSTN). Subscriptions had dipped to a three-year low of 128.27M in February before recovering by +6.95M from January to June (Financial Express – H1 growth; The Peninsula; Financial Express – Feb low). These BTRC figures come through news reports, not from BTRC's own tables, and outlets report slightly different totals for the same months.

The two numbers measure different things. BTRC counts **subscriptions**: every active SIM with a data plan and every broadband account, so one person with two SIMs is counted twice. A SIM in a household phone shared by several people is counted once. GSMA likewise counts **186M cellular connections, equal to 105% of the population** (DataReportal). That is how the number of connections can exceed the number of people. Kepios estimates **unique people**. For audience sizing, the 82.8M figure is the right base. The BTRC figure is the right one for the **channel mix**, and it says connectivity is mostly mobile. A third measure, from earlier research (Nov 4 2026), is BBS's own household survey, which reported **59.2% individual internet use** using a different method (UNB). So the true penetration likely sits between 47% and 59%.

Combining these gives an **estimated ~75M Muslim internet users**. The calculation is 91% × 82.8M, and it assumes Muslims and non-Muslims are online at the same rate. No source states this figure; it is our arithmetic.

Phones carry the traffic, and StatCounter's desktop reading is an outlier

Every signal except one says Bangladeshi internet use is mobile. **About 89% of BTRC internet subscriptions are mobile** (June 2026). The operators' subscriber bases are Grameenphone 86.59M, Robi 58.57M, Banglalink 37.86M and Teletalk 6.80M (Financial Express). **Android is about 91% of mobile OS share** (StatCounter OS). Budget handsets dominate. The following comes from earlier research (Nov 4 2026); the Daily Sun page returned 403 when re-fetched. In IDC's Q3 2025 shipments, TECNO had 20.4%, Infinix 18.2% and Xiaomi 14.9% (Daily Sun). In Q1 2024, sub-$100 phones were a third of the market (iConnect007/Counterpoint).

StatCounter's platform share for October 2026 shows desktop 56.04%, mobile 43.6% and tablet 0.35% (StatCounter). We do not use this to claim Bangladeshis browse mainly on desktop. StatCounter measures page views on the sites that carry its tracker. That sample can tilt toward office and desktop-heavy sites, and it can include automated traffic. We did not pull the 2025–2026 StatCounter history, so we cannot tell whether this is a one-month spike or a trend. A related caution applies to the traffic data in report 02: **Similarweb's free traffic-source percentages are desktop-only**.

Cheap gigabytes, mid-range speeds and a wide gender gap

Bonik Barta (September 2024) put **retail mobile data at about BDT 25–35 per GB**. Operators' cost was BDT 2.25–5.25 per GB, and customers say they feel "deprived and overcharged" (Bonik Barta). Cable.co.uk's 2022 ranking had Bangladesh at about Tk 33 ($0.32) per GB, the 12th cheapest in the world. Sources disagree on the 2023 figure ($0.23 vs $0.70), and that conflict is unresolved (Dhaka Tribune).

Speed figures vary by month and by how they are reported. DataReportal cites a **median mobile download of 36.84 Mbps and fixed 60.26 Mbps** (Ookla, 2025) (DataReportal). Ookla's own index readings, reported in the news, range from 24.59 Mbps (March 2024, 112th of 148) (Daily Star) to 41.72 Mbps (November 2025, against a global median of 103.01; from a search snippet) (TBS). We found no 2026 Ookla figure. The practical takeaway is that a heavy page still costs real money on a prepaid pack, and audio or video should stream only when the user asks for it. Report 06 weighs how strongly users themselves raise this.

The gender gap is among the widest in Asia. GSMA data for 2024, reported by Dhaka Tribune, puts mobile-internet adoption at **40% for men and 24% for women**. A later comparison gives 26% for women, and the two figures have not been reconciled (Dhaka Tribune; GSMA Mobile Gender Gap Report 2025). Earlier research (Nov 4 2026) noted that the social-media audience is about 63% male (DataReportal). Women are therefore a smaller and harder-to-reach part of the online audience. Report 06 shows that their specific feature needs are barely visible in the review evidence.

Four channels share Islamic attention, and search feeds the dedicated sites

Islamic content reaches Bangladeshi users through four overlapping channels.

Dedicated Bangla Islamic websites are small by national standards but well defined. The two leaders, muslimbangla.com and hadithbd.com, each draw an estimated **0.6–0.9M Bangladesh visits a month**. Their Similarweb Bangladesh ranks are about #460–480 (Similarweb muslimbangla.com; Similarweb hadithbd.com). Report 02 has the full ranking. **Organic search is the top channel for**

nearly every one of these sites, at 48–66% of desktop visits. The exceptions are quraanshareef.org (60.62% direct) and islamijindegi.com (direct-led, app-linked). Social referrals come from Facebook, WhatsApp Web and YouTube (Similarweb hadithbd.com; Similarweb quraanshareef.org). The head searches are practical: **নামাজের সময়সূচি** ("prayer schedule", Ahrefs BD volume 37K) and **ফজরের নামাজের সময়** ("Fajr prayer time", 31K) (Ahrefs muslimbangla.com). Next come duas, single-surah pages with Bangla meaning, Islamic baby names and seasonal worship. Keyword research covers demand in detail.

National newspapers are one to two orders of magnitude bigger than any Islamic site. prothomalo.com had about **20.0M implied Bangladesh visits in September 2026** (30.4M global × 65.82% BD) and is **Bangladesh's #10 site** (Similarweb prothomalo.com). Free tools cannot measure how much of that traffic goes to its ধর্ম (religion) section. Even so, the papers clearly compete for Islamic queries. Jugantor publishes a dated "আজকের নামাজের সময়সূচি" (today's prayer schedule) article (Jugantor). Newspapers appear in many sampled results pages: prothomalo.com for সূরা কাহফ প্রথম ১০ আয়াত (first 10 ayat of Surah Kahf); jagonews24.com in 6 of 16 Bing-BD pages; dhakapost.com in 4. Similarweb also finds heavy audience overlap between at-tahreek.com and news portals: jagonews24 85%, prothomalo 83%, somoynews.tv 80% (Similarweb at-tahreek.com).

YouTube and Facebook own listening and private questions. On the six Google-BD results pages captured, **5 of 6 showed a YouTube video block** with view counts in the lakhs (hundreds of thousands) (Google SERP সূরা ইয়াসিন বাংলা উচ্চারণ). **youtube.com appeared in 9 of 16 Bing-BD top-10s** (Bing ঘুমানোর দোয়া). Across 34 sampled Google-BD fiqh and practice queries, results pages for রুকইয়াহ (ruqyah), গান শোনা কি হারাম (is listening to music haram) and ঈদের নামাজের নিয়ম (how to pray Eid prayer) carried **33, 29 and 14 YouTube links**. Facebook posts and pages appeared in most fiqh results pages (SERP রুকইয়াহ; SERP গান শোনা কি হারাম). Social media reaches **64.0M user identities** (DataReportal). Facebook groups and YouTube comments could not be retrieved, so we cannot say how much Islamic Q&A happens there. We can only say that those platforms rank in search.

Apps are the habit layer. The largest Bangla Islamic apps have millions of installs on Google Play. These are global, device-level counts: Greentech Al Quran 14.7M, kutblog Bangla Quran উচ্চারণসহ ("with pronunciation") 8.67M, Muslim Bangla 5.99M, Muslims Day 5.69M and IRD Al Hadith 3.04M (Play: Muslim Bangla; Play: Greentech Al Quran). Several web leaders also run apps and push them: muslimbangla, ihadis, islamqa and hadithbd. quraanshareef.org and islamijindegi.com show the direct-traffic pattern typical of app companion sites. This document treats the web as the primary channel. The review evidence in report 06 nonetheless comes mostly from apps, because that is where Bangladeshi users write reviews.

A landscape split by format, by school of thought and by the state's absence

The site map below groups the properties we observed. The orientation labels come from author lists, affinity clusters and self-descriptions. **They are inferences; no source independently verifies them.**

Type	Examples	Orientation (inferred)	Evidence
Bangla all-in-one portal	muslimbangla.com	Hanafi/Deobandi-leaning; named muftis such as "মুফতী শফিকুল ইসলাম হাটহাজারী" (a Hathazari mufti) answer its masail (Q&A)	masails; Similarweb clusters it with alkawsar (Similarweb)
Bangla hadith/Quran library	hadithbd.com; ihadis.com + quranmazid.com (IRD)	hadithbd's affinity cluster is Ahl-e-Hadith monthlies. IRD describes its method as "the Madhab and Manhaj of the Salaf-e-Salehin" (from earlier research, Nov 4 2026)	Similarweb hadithbd.com; IRD
Scholarly monthly / fatwa archive	alkawsar.com (Markazud Dawah)	Hanafi/Deobandi; authors include Mufti Taqi Usmani and Mawlana Muhammad Abdul Malek	alkawsar.com
Scholarly monthly / fatwa archive	at-tahreek.com, al-itisam.com, tawheederdak.com	Ahl-e-Hadith	Similarweb alkawsar.com competitors
Single-purpose utility	salat.habibur.com (prayer times); alqurans.com, quraanshareef.org (Bangla Quran)	Neutral; salat.habibur shows both Hanafi and Shafi'i Asr	salat.habibur.com
Global reference with a Bangla layer	quran.com/bn, sunnah.com, islamqa.info/bn, islamhouse.com/bn	islamqa is a single-scholar Saudi Salafi source; quran.com and sunnah.com are non-sectarian text platforms	islamqa.info/bn; quran.com/bn
Government	islamicfoundation.gov.bd; quran.gov.bd (Ministry of Religious Affairs)	Official; IF's district schedules are reported to follow Hanafi practice (low-authority source, unverified)	IF; quran.gov.bd; teachers.gov.bd blog
Newspaper Islam sections	Prothom Alo ধর্ম, Jugantor ইসলাম ও জীবন, Kaler Kantho, Jago News, Dhaka Post	Mainstream; ad-funded	Prothom Alo; Jugantor

Type	Examples	Orientation (inferred)	Evidence
Ad-funded SEO blogs and caption sites	namerorthobangla.com, informationbangla.com, caption.com.bd, bd24live.com	None stated; often no Arabic and no grading	Bing রিজিক নিয়ে হাদিস
Video and social	YouTube channels, Facebook pages	All orientations	see channel section above

Three features of this map matter for planning.

First, **the two schools of thought compete for the same answer**. On রাগের মাথায় তালাক দিলে কি তালাক হয় ("does a divorce pronounced in anger count?"), Google-BD showed muslimbangla, Ahle Haq Media, IslamQA, al-Itisam and at-Tahreek on one page. None of them labels its madhhab (SERP). Autocomplete also shows users appending school labels to their queries, for example "বিতর নামাজের নিয়ম আহলে হাদিস" (how to pray witr, Ahl-e-Hadith) and "namaz time dhaka today hanafi" (Autocomplete হানাফি).

Second, **the state is absent as a digital product.** The Islamic Foundation homepage carries notices, tenders and zakat-fund bank details, but no prayer timetable, Hijri calendar or moon-sighting notice. Its "Quran" links point to Google Drive files. quran.gov.bd is a 2012 build that serves verse text as images and links to Adobe Flash (IF; quran.gov.bd). Users nonetheless treat IF as the reference for prayer times (report 06), so third parties fill that gap.

Third, **the most-visited results for many dua and topic-hadith queries are not Islamic institutions.** They are news portals and ad-heavy blogs; report 05 covers their quality.

Search interest is shrinking while AI answers and video take the top of the page

Google Trends Bangladesh, comparing yearly means on the same anchor scale, shows that **almost every core Quran, hadith and dua term declined from 2023 to 2026**:

Term	2023 → 2026	Change
নামাজের সময় (prayer time; the anchor)	46.7 → 30.6	−34%
আয়াতুল কুরসি (Ayatul Kursi)	14.3 → 6.1	−57%
ayatul kursi	20.3 → 8.7	−57%
surah mulk	11.9 → 6.4	−46%
surah rahman	7.3 → 3.7	−49%
সাইয়েদুল ইস্তেগফার (Sayyidul Istighfar)	4.7 → 1.7	−64%
বুখারী শরীফ (Bukhari Sharif)	2.2 → 0.9	−59%
quran bangla	8.6 → 5.0	−42%

Exceptions were flat or rising: **বাংলা উচ্চারণ (Bangla pronunciation) 32.7 → 35.4**, **নামাজ (namaz) 16.3 → 17.0**, জিকির (zikir) 2.6 → 2.7 and hadis 6.5 → 6.8. The 2026 mean covers January to early November and includes Ramadan (Trends quran set A; Trends hadith set A). These are **relative interest indices, not search counts**.

The most likely reason sits at the top of the results page. **All six Google-BD results pages captured showed an AI-generated answer.** For আয়াতুল কুরসি বাংলা উচ্চারণ (Ayatul Kursi Bangla pronunciation), the AI answer itself cited Prothom Alo, jagonews24.com and a Play Store app (Google SERP সূরা ইয়াসিন বাংলা উচ্চারণ). Five of the six also carried a YouTube block. Simple "give me the text of X" queries are exactly what an AI box can answer without a click. Three explanations for the decline are plausible: AI answers, a shift of listening to YouTube, and a shift of daily use to apps. The research notes label all three as **inference, not measurement**. A fourth possibility cannot be ruled out: Trends exact-phrase matching undercounts terms as users spread across more spellings.

There is one apparent contradiction. **Ahrefs' modelled organic traffic for muslimbangla.com grew roughly twelvefold over the same period**: March 2023 was 29.3K and March 2026 was 357.0K (Ahrefs muslimbangla.com). One reading is that a shrinking pool of clicks is concentrating on a few winners. The other is that Ahrefs' model differs from Trends. Both tools agree that **muslimbangla.com and hadithbd.com lost search traffic in the latest month**: −73.7K and −58.4K respectively in Ahrefs, with hadithbd also −9.6% in Similarweb (Ahrefs hadithbd.com; Similarweb hadithbd.com). For a new entrant, this argues for **interactive value**: audio sync, counters, routines, tracking and verification. AI boxes cannot easily replace these, whereas a static text page competes directly with the AI box.

Seasonality layers on top of the decline. Individual Ramadan keywords swing **about 5–40×** (Google Trends BD, Ramadan set). Site-level Ramadan lifts in Ahrefs' modelled organic traffic are only **about 1.2–1.9×**, because these sites carry year-round demand (Ahrefs hadithbd.com; Ahrefs muslimbangla.com). Keyword research and seasonal search trends cover this in depth.

Conclusion

The Bangladeshi Islamic web is a mobile, search-led market of roughly 75 million potential users (our estimate). Two Bangla-first portals lead it, and newspapers, YouTube and apps press on it from three sides. What changed during this research is the picture of search itself. The channel that built today's leaders is shrinking on core reference terms, and Google is answering more of those queries directly. A new platform should treat SEO as necessary but declining. It should build daily-use utilities such as district prayer times, today's portion and trackers, which earn direct and returning visits, rather than relying on static text pages to win clicks. The gender gap and the government's absence from digital products are structural openings, but neither is yet backed by direct user demand in the evidence.

Confidence & limitations

- **High confidence:** Muslim share (census); DataReportal and BTRC figures, with the caveat that BTRC is relayed through news; the mobile majority; the direction of the Trends decline, which is consistent across about 10 terms.
- **Medium confidence:** data price and speed (ranges, with conflicting sources); gender-gap magnitude (24% vs 26% unreconciled); channel shares, which are desktop-only Similarweb splits.
- **Low confidence / inference:** the ~75M Muslim online audience; madhhab orientation labels; causes of the search decline; StatCounter's desktop reading, which we discount. Newspaper Islam-section traffic is **unmeasured**.
- Google results pages were sampled thinly: 6 Quran queries before a CAPTCHA, plus 34 fiqh queries from a signed-in Chrome session that may be personalised. See methodology.

CHAPTER 2

Two Bangla portals lead Bangladesh's Islamic web

ABOUT THIS CHAPTER

In plain words. This chapter ranks the Islamic websites that Bangladeshis actually visit, using traffic estimates from Similarweb and Ahrefs, and gives a profile of each major site: what it offers, who it serves, its strengths and its weaknesses.

Key takeaway. Two Bangla websites lead clearly: **muslimbangla.com** (~905K estimated Bangladesh visits a month) and **hadithbd.com** (~601K). Every other Bangla Islamic site is at least three times smaller. Global sites such as quran.com may be large in Bangladesh too, but the tools only allow an upper estimate. Newspapers are far bigger overall, but their religion sections cannot be measured.

Why it matters for the product. These are the sites a new platform competes with for the same Google searches. Their profiles show what users already get, and where they are already let down.

How to use this chapter. Use the ranking table for the competitive picture and the site profiles when deciding how to position against a specific competitor.

Watch out for. All numbers are model estimates that can be off by two to three times. Trust the order more than the numbers. Several well-known domains (for example islamijibon.com) are no longer active.

Key findings

- **muslimbangla.com and hadithbd.com form a clear first tier.** They draw an estimated **~905K and ~601K Bangladesh visits a month** respectively (Similarweb, September 2026), with Bangladesh ranks **#460 and #478**. Every other Bangla-native Islamic site is at least **3× smaller**.
- **The second tier draws ~100–360K Bangladesh visits a month.** It contains salat.habibur.com (prayer times, desktop-only data), alqurans.com (Bangla Quran), alkawsar.com (Hanafi monthly and fatwa archive) and ihadis.com (IRD hadith).
- **Global giants have unknown Bangladesh volume.** Bangladesh is outside the top-5 countries of quran.com (19.7M global visits) and islamqa.info (8.3M), so only **upper bounds** exist: below ~1.14M and below ~403K Bangladesh visits respectively. sunnah.com's Bangladesh share is **unavailable**.
- **The tools disagree on absolute volumes by roughly 2–3×.** Rank order is the reliable output. One example: Ahrefs' organic-only estimate for ihadis.com (405K) is *larger* than Similarweb's all-channel total (206.7K).
- **Search is the engine.** Organic search is the #1 channel (48–66% of desktop visits) for 7 of the 9 Bangla sites whose top channel was visible. The head queries are **prayer times**, for example নামাজের সময়সূচি ("prayer schedule", 37K/month, Ahrefs BD), followed by duas, single surahs, baby names and seasonal worship.
- **Newspapers dwarf all Islamic sites.** prothomalo.com has ~20.0M implied Bangladesh visits and is Bangladesh's **#10** site, but its religion-section traffic is **unmeasurable** with free tools.
- **Several obvious Bangla Islamic domains are defunct.** islamijibon.com and quranbangla.com are for sale, and al-hadith.com is parked. salat.habibur.com itself points users to a newer site.

Methodology: modelled estimates, one ambiguous label, and three tools that disagree

All traffic numbers here are third-party model estimates, not first-party analytics. No site owner publishes analytics.

The primary source is **Similarweb's free website pages**, showing September 2026 data, fetched 2026-11-05 (Similarweb muslimbangla.com). Two limitations apply:

- **The headline "Total Visits" figure sits beside a "Total Visits Last 3 Months" chart**, so it could be a three-month total or a single month. We treat it as the **latest single month**, for two reasons. That is Similarweb's standard free-page layout. And for quran.com, 19.7M as one month fits Ahrefs' 6.3M organic-only estimate combined with quran.com's 46.9% direct share. **If the figure is actually a three-month total, divide every implied Bangladesh figure below by 3.** The ranking order would not change.
- **The traffic-source split is limited.** Similarweb's free page shows only the top three channels, gives a percentage only for the first, and shows desktop only. Top pages are paywalled.

"Implied BD visits" = global visits × Bangladesh share, both taken from the same tool and month. Every implied figure is therefore an **estimate of an estimate**.

The cross-check is **Ahrefs' free pages** (ahrefstop.com, October 2026). Ahrefs measures **organic search traffic only**, so its figures are not comparable to Similarweb's all-channel totals (Ahrefs muslimbangla.com). Its per-keyword Bangladesh volumes, such as 37K for নামাজের সময়সূচি, are model outputs. They are more granular than the volume buckets Ahrefs' free keyword generator returns (see report 10).

The tools conflict in four places:

Site	Similarweb	Ahrefs	Other	Reading
muslimbangla.com	958.2K total; ~508K implied organic (958.2K × 53%, using a desktop-only share)	255.5K organic; 243.8K Bangladesh	**Semrush: 2.05M total for September 2026, +143% vs August** (Semrush). An earlier Semrush snapshot gave ~142.9K for November 2025 (Semrush PL)	For the same month, total visits differ ~2× (SW vs Semrush), and organic differs ~2× (SW-implied vs Ahrefs). Rank #1 is consistent across tools; volume is not
hadithbd.com	730.8K total; ~467K implied organic	183K organic; 167.8K Bangladesh	Earlier research (Nov 4 2026) recorded a 71.81% bounce rate (Similarweb, April 2026) vs 47.36% now	Either a methodology change or a real change
ihadis.com	206.7K total; 46.84% Bangladesh (~97K)	**405K organic**; 146K Bangladesh (36%); Turkey 28.5%	Ahrefs history jumps from 5–6K/month (2025) to 716K (March 2026) and 992K (April 2026) (Ahrefs)	Organic exceeding total is impossible within one tool. This points to a non-Bangla keyword spike (+98.2K from Turkey)
Earlier research (Nov 4 2026)	—	"hadithbd.com and muslimbangla.com each get ~255K organic visits a month"	—	Superseded. hadithbd is now 183K and muslimbangla 255.5K

Sources: Similarweb hadithbd.com, Ahrefs hadithbd.com, Similarweb ihadis.com, Ahrefs ihadis.com.

The **Similarweb Bangladesh "Faith & Beliefs" category ranking returned HTTP 404**. The broader community-and-society list looked global (dzen.ru #1, jw.org, biblegateway; quran.com #18) and contained no Bangladeshi site, so we did not use it (Similarweb top websites). The ranking below is therefore assembled site by site from domains the research team already knew or found in Bangladesh search results. **A site we did not think to check could be missing.** The sites not fetched are listed under "Confidence & limitations".

Ranking: Bangla-first sites by estimated Bangladesh visits

Data is Similarweb, September 2026, accessed 2026-11-05. Traffic-source percentages are the top channel only, and desktop only.

#	Site	URL	Purpose	Language	Global visits	BD share	Implied BD visits (est.)	Top traffic source	SW BD rank	Confidence	Source
1	Muslim Bangla	muslimbangla.com	Q&A/fatwa (masail), prayer times, Quran, hadith, dua, zakat	Bangla	958.2K	94.5%	**~905K**	Organic 53.06%	#460	High for rank; Medium for volume	SW
2	HadithBD	hadithbd.com	Hadith (33 books), Quran, dua, Islamic names, books	Bangla (+English)	730.8K	82.3%	**~601K**	Organic 63.97%	#478	High for rank; Medium for volume	SW
3	Salat Habibur	salat.habibur.com	Prayer-time tables (Dhaka and districts)	Bangla/English	364.1K	100% (desktop only)	~364K	Organic 57.1%	none ("No Data Available")	**Low**	SW
4	Al Qurans	alqurans.com	Bangla Quran surah pages with meaning	Bangla	281.9K	75.47%	~213K	Organic 61.58%	#1,179	Medium	SW
5	Al-Kawsar	alkawsar.com	Monthly magazine archive and numbered fatwa Q&A	Bangla	196.6K	88.75%	~174K	Organic 65.67%	#2,054	Medium	SW
6	iHadis (IRD)	ihadis.com	Hadith, prayer times, Ramadan calendar	Multi-language incl. Bangla	206.7K	46.84%	~97K	Organic 48.61%	#3,506	Medium-Low (Ahrefs conflict)	SW
7	At-Tahreek	at-tahreek.com	Monthly At-Tahreek magazine (Ahl-e-Hadith)	Bangla	60.6K	69.33%	~42K	Organic 63.61%	#6,432	Medium	SW
8	Quraan Shareef	quraanshareef.org	Bangla Quran reader/download	Bangla/Arabic/English	32.7K	72.14%	~24K	**Direct 60.62%**	#10,371	Medium-Low	SW
9	Islami Jindegi	islamijindegi.com	App companion/content site	Bangla	14.6K	80.17%	~12K	Direct 37.23%	#16,803	Low	SW
10	IslamHouse	islamhouse.com	Multilingual library (incl. 1,990 Bangla items)	Multilingual	149.3K	6.43%	~9.6K (whole domain; /bn not separable)	not shown	#5,222 **in Saudi Arabia**	Low	SW
11	Quran Mazid (IRD)	quranmazid.com	Quran reader	Multi-language (English default at mobile width)	5.5K	51.89%	~2.9K	not shown	#31,585	Low (7 keywords)	SW
—	Al Quran: Digital (MoRA)	quran.gov.bd	Government Bangla Quran	Bangla/Arabic (as images)	not fetched	—	—	—	#11,430 (from earlier research, Nov 4 2026; **not re-verified**)	Low	earlier notes

Ahrefs organic cross-check, October 2026: muslimbangla.com had 255.5K organic (243.8K Bangladesh, DR 46, 18K keywords). hadithbd.com had 183K (167.8K Bangladesh, DR 53, 49.7K keywords). ihadis.com had 405K (146K Bangladesh, DR 35) (Ahrefs muslimbangla; Ahrefs hadithbd; Ahrefs ihadis).

Reading the table. The gap between tiers is robust even though the absolute numbers are not: every tool places muslimbangla and hadithbd well ahead of the rest. salat.habibur.com's 100% Bangladesh share is **desktop-only**, and Similarweb gives the site no rank, so treat its #3 position cautiously. quraanshareef.org's second-largest country is Malaysia (19.65%). That is most likely Bangladeshi migrant workers, but this is an inference (Similarweb quraanshareef.org).

Global benchmarks: only upper bounds for Bangladesh

When Bangladesh is not among a site's top five countries, Similarweb's free page does not show its share. The most we can say is that Bangladesh's share is below the fifth country's share.

Site	Global visits (Sept 2026)	5th-ranked country	BD visits (upper bound only)	Notes	Source
quran.com	19.7M	Indonesia 5.8%	**< ~1.14M**	Direct 46.92% top channel; 13.47 pages/visit; 5:02 average visit. It is a top-affinity competitor of alqurans.com (100%), quraanshareef.org (100%), hadithbd.com (90%) and ihadis.com (85%), so Bangladeshi users clearly overlap	SW quran.com; SW alqurans.com
islamqa.info	8.3M	Algeria 4.86%	**< ~403K**	Whole domain; /bn subsection not separable	SW islamqa.info
sunnah.com	**unavailable** (not fetched)	—	**unavailable**	Appears among hadithbd.com's affinity competitors	SW hadithbd.com
islamicfinder.org	**unavailable** (not fetched)	—	**unavailable**	Listed as a competitor of salat.habibur.com	SW salat.habibur.com

The upper bound for quran.com, below ~1.14M, overlaps Tier 1. So **quran.com could be the most-used Islamic website in Bangladesh, but we cannot confirm it.** Reporting it as "#1 in Bangladesh" would mistake global traffic for Bangladeshi traffic.

Newspapers as context, not competitors we can measure

prothomalo.com recorded **30.4M visits** in September 2026 with a **65.82% Bangladesh share (~20.0M implied Bangladesh visits)**, ranking **#10 in Bangladesh**. Direct traffic leads at 69.47%, and none of its visible top keywords are religious (Similarweb prothomalo.com). Section-level traffic for Prothom Alo ধর্ম (religion), Jugantor ইসলাম ও জীবন (Islam and life), Kaler Kantho ইসলাম, Dhaka Post ইসলাম or Jago News ধর্ম would need paid subfolder reports. The domain totals for jugantor, kalerkantho, dhakapost and jagonews24 were not fetched.

As a hypothetical, **1–3% of Prothom Alo's Bangladesh traffic would be 200–600K visits**, putting its religion section in hadithbd.com's band. That range is an illustration, not a measurement. What is observed is that newspapers rank for seasonal and how-to queries. Jugantor publishes a daily "আজকের নামাজের সময়সূচি" (today's prayer schedule) article (Jugantor), and jagonews24.com appeared in 6 of 16 Bing-BD Islamic results pages. Dedicated sites, by contrast, hold #1 positions on several evergreen reference terms; hadithbd ranks #1 for সাইয়েদুল ইস্তেগফার (Sayyidul Istighfar) and কোরবানির ফজিলত সম্পর্কে হাদিস (hadith on the virtues of Qurbani) (Ahrefs hadithbd).

Dead domains and moved sites

Several domains that look like natural Bangla Islamic properties are not active sites:

- **islamijibon.com** redirects to "IslamiJibon.com is for sale | HugeDomains" (islamijibon.com).
- **quranbangla.com** is also for sale (quranbangla.com).
- **al-hadith.com** is a parked "/lander" page (al-hadith.com).
- **hadith.one** timed out twice (25 s and 20 s) during the audit, yet it still appears among Bing-BD results for "hadith bangla" (hadith.one; Bing hadith bangla).
- **salat.habibur.com** shows a banner, "OUR LATEST SITE IS HERE >> namaz.habibur.com", so its traffic may be migrating (salat.habibur.com).

- **assunnahfoundation.org** is a charity/NGO site with no Quran, hadith, dua or prayer-time content (ASF).

From earlier research (Nov 4 2026), a web-only entrant, **Priyo Muslim**, launched in September 2026 with prayer times for all 64 districts (goodnews.com.bd). It was not re-checked in this round and has no traffic figure.

Per-site profiles

Fields marked **unavailable** were not exposed by free tools. Fields marked **not verified** were not checked in this research. Where a field relies on inference, it is labelled *(inferred)*. Unless noted, visits are Similarweb (September 2026), keywords are Similarweb or Ahrefs Bangladesh (October 2026), and features come from the 2026-11-05 audit (detail in report 05).

muslimbangla.com

Field	Value
Target audience	Bangladeshi Muslims (94.5% BD); general practising audience; Hanafi-leaning *(inferred from named muftis and its affinity cluster)*
Main purpose	All-in-one portal: mufti-answered masail (Q&A), prayer times, Quran, hadith, dua, zakat
Monthly visits (global)	958.2K (SW); Ahrefs organic 255.5K; Semrush 2.05M (conflict)
Estimated BD share	94.5% (SW); 95.4% of organic (Ahrefs)
Estimated BD visits	~905K (estimate)
Traffic sources	Organic 53.06% (1st, desktop), then Direct, then Organic Social. Social from WhatsApp Web, Facebook, YouTube. 80.31% of referrals come from Faith & Beliefs sites
Popular pages	**Unavailable** (paywalled). Implied by keywords *(inferred)*: prayer-time pages such as /world/BD/prayer-times-Dhaka, and masail pages
Popular keywords	নামাজের সময়সূচি ("prayer schedule", 37K, position 4); ফজরের নামাজের সময় ("Fajr prayer time", 31K, position 7); ফজরের নামাজের শেষ সময় ("end of Fajr time", 20K, position 9); আজকের নামাজের সময়সূচী ("today's prayer schedule", 15K, position 4); আজকের নামাজের সময়সূচী ঢাকা ("today's prayer schedule Dhaka", 7.3K, position 2); "fajr time dhaka"; brand terms. 871 keywords (SW)
Main features	Quran with Bangla উচ্চারণ (pronunciation) per verse, tafsir link and audio; hadith books; 40 dua categories; district prayer times; zakat calculator with BAJUS gold price and BD units (ভরি/রত্তি/আনা); masail with named muftis (IDs ~171,800–173,100); /today daily ayah; Hijri date
Mobile experience	No horizontal overflow at 375px. PWA manifest present but misnamed ("হজ্ব ও উমরা গাইড", Hajj & Umrah guide)
Language	Bangla
Strengths	Only site covering Quran + hadith + dua + prayer time + Q&A in Bangla; named-mufti answers at scale; #1 on Google-BD for নামাজের সময়সূচি; cleanest page observed for দুশ্চিন্তা দূর করার দোয়া (dua for relief from worry): 0 ad scripts, 8 references
Weaknesses	Duas carry **no source references** and no audio; Quran translator and tafsir author not named; district picker not seen; lost −73.7K organic month on month (Ahrefs)
Likely return drivers *(inferred)*	Daily prayer times; asking a question (an app reviewer got "a correct answer within 2 days", Play); amal tracking in the app
Missing features	Dua sourcing; Qibla; Banglish/typo search (not tested); named translations; a cited moon-sighting source for Hijri

Sources: SW, Ahrefs, home, Quran 1, dua, masails, zakat, manifest.

hadithbd.com

Field	Value
Target audience	Bangladeshi readers seeking sourced hadith, Quran and dua (82.3% BD); affinity cluster includes Ahl-e-Hadith monthlies *(inferred)*
Main purpose	Bangla hadith, Quran and dua library
Monthly visits (global)	730.8K (SW, −9.6% m/m); Ahrefs organic 183K (−58.4K)

Field	Value
Estimated BD share	82.3% (SW); 91.7% of organic (Ahrefs)
Estimated BD visits	~601K (estimate)
Traffic sources	Organic 63.97% (1st), then Direct, then Organic Social (Facebook, YouTube, WhatsApp Web); paid 0%
Popular pages	**Unavailable**. Implied *(inferred)*: Sayyidul Istighfar dua page, Surah Mulk, Islamic names, Dhul-Hijjah amal
Popular keywords	সাইয়েদুল ইস্তেগফার ("Sayyidul Istighfar", 12K, position 1); জিলহজ্জ মাসের আমল ("deeds of the month of Dhul-Hijjah", 10K+, position 1); মেয়েদের ইসলামিক নাম ("Islamic names for girls", 19K, position 2); কোরবানির ফজিলত সম্পর্কে হাদিস ("hadith on the virtues of Qurbani", 4.6K, position 1); surah mulk (35K, position 5); istikhara dua
Main features	33 books / 94,570 hadith with grading ("হাদিসের মানঃ সহিহ", grade: sahih) and edition named; 3 Bangla Quran translations + English; word-by-word and tajweed views; শানে নুযুল (reasons of revelation); Hisnul Muslim (267 duas); morning/evening zikr; hifz tracker; tilawat progress; 12,535 signups; AI-generated Q&A; 3,086 children's names; 172 books
Mobile experience	No horizontal overflow at 375px (scrollWidth 375); reading theme option. Cloudflare challenge blocks non-browser clients
Language	Bangla (+English translation)
Strengths	Deepest sourced Bangla corpus; the **only site with Banglish search** ("namaj" → নামায / নামাজ / সালাত); no ads
Weaknesses	**No prayer times, Qibla or zakat**; no typo tolerance ("নামজ" → 1 irrelevant hit); hadith review field empty; AI answers not scholar-reviewed; run by one individual; content "সর্বস্বত্ব সংরক্ষিত" (all rights reserved)
Likely return drivers *(inferred)*	4.25 pages/visit, 2:20 average visit; hifz/tilawat progress; daily ayah/hadith email
Missing features	Prayer times; Bangla hadith commentary (sharh); typo correction

Sources: SW, Ahrefs, home, hadith, search, AI Q&A.

salat.habibur.com

Field	Value
Target audience	Users looking up daily prayer times for Bangladeshi districts
Main purpose	Prayer-time tables
Monthly visits (global)	364.1K (SW)
Estimated BD share	100% (**desktop-only geography**; an unlabeled 10.6% value also appears)
Estimated BD visits	~364K (low-confidence estimate)
Traffic sources	Organic 57.1% (1st), then Direct, then Referrals; 0% paid
Popular pages	**Unavailable**. Google's breadcrumb shows "৬৪ জেলা" (64 districts)
Popular keywords	namajer somoy; namaz time dhaka; fazar er namaj er time; fazr waqt today; নামাজের সময়সূচি ("prayer schedule"). 320 keywords
Main features	Coordinates; Qibla bearing (278°); times both calculated to the second and rounded; **both Shafi'i (2:54) and Hanafi (3:42) Asr**; সেহরি শেষ (end of sehri); ইশরাক (ishraq); আসর মাকরুহ (makruh Asr time); night thirds; Hijri; full-year table; worldwide page; API
Mobile experience	No overflow at 375px; dated table UI; no manifest
Language	Bangla/English
Strengths	Transparent calculation; the only site showing both Asr times and Qibla; #2 on Google-BD for নামাজের সময়সূচি
Weaknesses	65.48% bounce, 1.35 pages/visit; dated UI; banner points users to namaz.habibur.com
Likely return drivers *(inferred)*	Daily time lookup; bookmarking (direct is the 2nd channel)
Missing features	Anything beyond prayer times

Sources: SW, Bangla, home.

alqurans.com

Field	Value
Target audience	Bangladeshi readers wanting a surah with Bangla meaning (75.47% BD)
Main purpose	Bangla Quran surah pages
Monthly visits (global)	281.9K (SW, +5.65% m/m)
Estimated BD share	75.47%
Estimated BD visits	~213K (estimate)
Traffic sources	Organic 61.58% (1st), then Direct, then Organic Social
Popular pages	**Unavailable**. Implied *(inferred)*: Surah Mulk, Waqiah and Kahf pages
Popular keywords	sura mulk bangla; surah mulk; surah waqiah; surah waqiah bangla; surah kahf. 456 keywords
Main features	**Not verified** (not in the feature audit)
Mobile experience	**Not verified**
Language	Bangla
Strengths	4.06 pages/visit, 2:42 average visit; ranks on DuckDuckGo-BD and Bing-BD for surah উচ্চারণ (pronunciation) queries
Weaknesses	Similarweb files it under "Programming and Developer Software" (odd classification); otherwise **not verified**
Likely return drivers *(inferred)*	Repeat surah reading (Mulk, Waqiah, Kahf are habitual surahs)
Missing features	**Not verified**

Source: SW.

alkawsar.com

Field	Value
Target audience	Hanafi/Deobandi-leaning readers seeking scholarly rulings (88.75% BD)
Main purpose	Monthly Al-Kawsar (Markazud Dawah) magazine archive (Oct 2009 – Oct 2026) and numbered Q&A (2007–2026)
Monthly visits (global)	196.6K
Estimated BD share	88.75%
Estimated BD visits	~174K (estimate)
Traffic sources	Organic 65.67% (1st); 100% organic
Popular pages	**Unavailable**
Popular keywords	al kawsar; alkawsar; istikhara dua; "Madina certificate" (in Bangla). 290 keywords. Users also append "আল কাউসার" to fiqh queries as an authority tag (Autocomplete)
Main features	Author directory (Mufti Taqi Usmani, Mawlana Muhammad Abdul Malek); Q&A archive with year filters; ask form; আনওয়ারুল কুরআন section
Mobile experience	Fast (headless LCP ~1.2 s); no manifest; no dark mode
Language	Bangla
Strengths	Named authorship; strong brand authority in queries; no ads
Weaknesses	Exact-match search only ("নামজ" → nothing found); 64.44% bounce
Likely return drivers *(inferred)*	Monthly issue; named scholars
Missing features	Quran, hadith, dua, prayer times; fuzzy search

Sources: SW, home, Q&A.

ihadis.com (IRD Foundation)

Field	Value
Target audience	Bangla and multilingual hadith readers. Only 46.84% BD (SW); US 11.1%; 36% BD of organic (Ahrefs) with Turkey 28.5%
Main purpose	Hadith library plus prayer times and Ramadan calendar. Quran lives on quranmazid.com; duas on duaruqyah.com
Monthly visits (global)	206.7K (SW, +21.36%); Ahrefs organic 405K (conflict)
Estimated BD share	46.84% (SW) vs 36% (Ahrefs)
Estimated BD visits	~97K (SW) vs 146K BD organic (Ahrefs). **Conflict**
Traffic sources	Organic 48.61% (1st), then Direct, then Organic Social
Popular pages	**Unavailable**. From earlier research (Nov 4 2026): programmatic district Ramadan-calendar pages (example)
Popular keywords	prayer time; fajr time dhaka; islamic prayer times; hadis bangla; maghrib azan time (SW). Ahrefs BD: হাদিস ("hadith", 7.6K, position 4); বুখারী শরীফ (Bukhari Sharif); লাইলাতুল কদর সম্পর্কে হাদিস (hadith about Laylatul Qadr)
Main features	Many collections incl. Bukhari (97 chapters, 7,563 hadith), Muslim, Abu Dawud, Nasai, Ibn Majah, Mishkat, Riyadus Salihin, the Silsila series; "সহিহ হাদিস" (sahih hadith) labels; prayer times (Karachi method) with forbidden and nafl times, sehri/iftar and a monthly table; Hijri; dark mode
Mobile experience	No overflow at 375px; manifest present but **/sw.js 404**; search results load slowly on the client
Language	Multi-language incl. Bangla
Strengths	Breadth of collections; Bangla search works (8,002 results for সালাত, 1,396 for নামাজ); prayer utilities
Weaknesses	**Default Asr 2:54 PM is the non-Hanafi time** (Hanafi sites show 3:41–3:42); grader and translator not named; "21 Kartik" Bangla date vs muslimbangla's "20 Kartik"; scope split across three domains
Likely return drivers *(inferred)*	Prayer times; Ramadan calendar
Missing features	Named grading; commentary; Qibla on web (app only); unified Quran/dua

Sources: SW, Ahrefs, Bukhari, prayer times.

at-tahreek.com

Field	Value
Target audience	Ahl-e-Hadith readers (69.33% BD)
Main purpose	Monthly At-Tahreek magazine and fatwa content
Monthly visits (global)	60.6K
Estimated BD share	69.33%
Estimated BD visits	~42K (estimate)
Traffic sources	Organic 63.61% (1st)
Popular pages	**Unavailable**
Popular keywords	ঈদে মিলাদুন্নবী (Eid-e-Milad-un-Nabi); "at tahreek"; মৃত্যু (death)
Main features	**Not verified** (not audited)
Mobile experience	**Not verified**
Language	Bangla
Strengths	Appears in Google-BD results for contested rulings (talaq, bank jobs, menstruation and Quran)
Weaknesses	69.84% bounce; 2.25 pages/visit
Likely return drivers *(inferred)*	Monthly issue; school-of-thought loyalty
Missing features	**Not verified**

Source: SW.

quraanshareef.org

Field	Value
Target audience	Bangla readers incl. diaspora (BD 72.14%, Malaysia 19.65%; migrant workers *inferred*)
Main purpose	Bangla Quran reader/download
Monthly visits (global)	32.7K (−4.16%)
Estimated BD share	72.14%
Estimated BD visits	~24K (estimate)
Traffic sources	**Direct 60.62% (1st)**
Popular pages	**Unavailable**
Popular keywords	quran bangla; quran sharif; bangla quran; al quran bangla; আল কুরআন বাংলা অর্থসহ ডাউনলোড ("Al Quran with Bangla meaning, download")
Main features	Per-surah Arabic + Bangla + English; one audio element
Mobile experience	No overflow at 375px; no manifest; internal links use http://
Language	Bangla/Arabic/English
Strengths	Top web result on Google-BD (headless, non-BD IP) for "বাংলা কুরআন" (Bangla Quran) and "quran bangla"
Weaknesses	Translator not named; no উচ্চারণ (pronunciation) on Al-Fatihah; no tafsir; no search
Likely return drivers *(inferred)*	Bookmarked reading (direct-led)
Missing features	Pronunciation, tafsir, search, attribution

Sources: SW, Al-Fatihah.

islamijindegi.com

Field	Value
Target audience	Users of the Islami Jindegi app (80.17% BD). Tabligh/Qawmi-leaning, from earlier research (Nov 4 2026) *(inferred)*
Main purpose	App companion/content site
Monthly visits (global)	14.6K
Estimated BD share	80.17%
Estimated BD visits	~12K (estimate)
Traffic sources	Direct 37.23% (1st)
Popular pages	**Unavailable**
Popular keywords	"islami zindagi apps"; "islamidars.com"
Main features	**Not verified** on web. The Play app (1.38M installs) is praised for its Kalpurush font and criticised over the Hijri date (Play)
Mobile experience	**Not verified**
Language	Bangla
Strengths	Brand carried over from the app
Weaknesses	Tiny web footprint
Likely return drivers *(inferred)*	App users visiting the web
Missing features	**Not verified**

Source: SW.

islamhouse.com (/bn)

Field	Value
Target audience	Multilingual; BD 6.43% of the whole domain (France 10.78%, Algeria 7.04%, Saudi 6.65%)
Main purpose	Library of books, articles, audio, video and fatwa
Monthly visits (global)	149.3K (engagement "measured by GA4", i.e. the owner connected analytics)
Estimated BD share	6.43%
Estimated BD visits	~9.6K for the whole domain; /bn not separable
Traffic sources	**Unavailable**
Popular pages	**Unavailable**
Popular keywords	Arabic and French PDF searches, not Bangla
Main features	1,990 Bangla items; author and source filters; Quran and hadith delegated to QuranEnc and HadeethEnc
Mobile experience	Headless LCP ~4.5 s on search, the slowest observed
Language	Multilingual incl. Bangla
Strengths	Free content; GA4-measured data is likely more accurate than modelled figures
Weaknesses	Search dropped the query (unverifiable); no licence terms seen
Likely return drivers *(inferred)*	Downloads
Missing features	Working Bangla search

Sources: SW, home.

quranmazid.com (IRD)

Field	Value
Target audience	Mixed (51.89% BD)
Main purpose	Quran reader (IRD's Quran site)
Monthly visits (global)	5.5K
Estimated BD share	51.89%
Estimated BD visits	~2.9K (estimate; tiny sample)
Traffic sources	**Unavailable**
Popular pages	**Unavailable**
Popular keywords	7 keywords only
Main features	Arabic; bookmarks link; blogs; dua links out to duaruqyah.com
Mobile experience	No overflow; defaults to English (Saheeh International) at mobile width; /manifest.json 404
Language	Multi-language
Strengths	IRD brand
Weaknesses	Bangla default not confirmed; low traffic
Likely return drivers *(inferred)*	**Not verified**
Missing features	Bangla-first default

Sources: SW, surah 1.

quran.com (/bn)

Field	Value
Target audience	Global; Bangladeshi users overlap heavily (affinity data)

Field	Value
Main purpose	Quran reader
Monthly visits (global)	19.7M (SW); Ahrefs organic 6.3M
Estimated BD share	**< 5.8%** (upper bound)
Estimated BD visits	**< ~1.14M** (upper bound only)
Traffic sources	Direct 46.92% (1st)
Popular pages	**Unavailable**. Keywords imply Surah Mulk, Waqiah, Kahf and Baqarah
Popular keywords	quran; surah mulk; surah waqiah; surah kahf; surah baqarah. 27.6K keywords
Main features	4 named Bangla translations; 4 named Bangla tafsirs (Fathul Majid, Ahsanul Bayaan, Abu Bakr Zakaria, Ibn Kathir); Bangla word-by-word; audio; reflections; login
Mobile experience	No overflow; **real PWA** (manifest + Workbox service worker); theme setting
Language	Multilingual with a Bangla UI
Strengths	Best Bangla Quran depth and attribution; 13.47 pages/visit
Weaknesses	**No Bangla-script pronunciation** (Latin transliteration only); API search returns **0 for নামাজ** (namaz); no prayer time, Hijri or zakat
Likely return drivers *(inferred)*	Direct traffic; reading progress for logged-in users (not exercised)
Missing features	Bangla উচ্চারণ (pronunciation); Bangla synonym search

Sources: SW, quran.com/bn/1, API translations, API tafsirs.

islamqa.info (/bn)

Field	Value
Target audience	Global Salafi-leaning Q&A readers; Bangla subsection
Main purpose	Fatwa Q&A (Sheikh Muhammad Saalih al-Munajjid)
Monthly visits (global)	8.3M (whole domain)
Estimated BD share	**< 4.86%** (upper bound)
Estimated BD visits	**< ~403K** (upper bound, whole domain)
Traffic sources	**Unavailable** for BD
Popular pages	**Unavailable**
Popular keywords	**Unavailable** for /bn. Appears (in Arabic) in Google-BD results for talaq and music rulings
Main features	Cited ayat and hadith numbers; save/share/print; view counts; Google-powered search
Mobile experience	No overflow; **real PWA** (manifest + service worker)
Language	Bangla (with typos such as "নিয়ন্ত্রয়ের")
Strengths	The **only site that corrected a misspelling** ("নামজ" → নামাজ); clear citations
Weaknesses	Single-scholar, single-orientation source; Hijri date one day ahead of BD sites; no Quran, prayer or dua modules
Likely return drivers *(inferred)*	Search-led one-off answers
Missing features	BD-specific dates and times

Sources: SW, answer 329, search.

sunnah.com

Field	Value
Target audience	Global English hadith readers

Field	Value
Main purpose	Hadith collections
Monthly visits / BD share / BD visits	**Unavailable** (not fetched; BD outside top 5)
Traffic sources	**Unavailable**
Popular pages / keywords	**Unavailable**
Main features	Grade toggle; Hisn al-Muslim (English); a Bangla side-language on some books (Bukhari, Nawawi40), but none on Muslim book 1, and Abu Dawud lists only Urdu
Mobile experience	**Not verified**
Language	English (partial Bangla)
Strengths	Grading toggle; sourcing
Weaknesses	Bangla search for সালাত returns "no results"; WebFetch blocked (403)
Likely return drivers	**Not verified**
Missing features	Full Bangla coverage and Bangla search

Sources: Bukhari 1, search.

islamicfoundation.gov.bd and quran.gov.bd (government)

Field	Value
Target audience	Citizens; institutional reference
Main purpose	IF: government portal (notices, tenders, zakat fund, journals). quran.gov.bd: Ministry of Religious Affairs digital Quran
Monthly visits / BD share / BD visits	**Unavailable** (IF not fetched). quran.gov.bd BD rank #11,430 from earlier research (Nov 4 2026, not re-verified)
Traffic sources	**Unavailable**
Popular pages / keywords	quran.gov.bd still ranks on Google-BD for "বাংলা কুরআন" (Bangla Quran) and "quran bangla"
Main features	IF: Quran surah PDFs on Google Drive; link to quran.gov.bd. quran.gov.bd: verse text as images, audio player, e-books, Flash-era media
Mobile experience	quran.gov.bd: text-as-image, 2012 build (fails the mobile test). IF: www. host did not resolve; broken TLS chain
Language	Bangla
Strengths	Institutional authority (users cite IF as the reference for prayer times; see report 06)
Weaknesses	**No online prayer timetable, Hijri calendar, moon-sighting notice or Ramadan timetable found**
Likely return drivers	None observed
Missing features	Essentially every user-facing feature

Sources: IF, IF external links, quran.gov.bd.

Conclusion

The ranking shows a thin market. The second-largest Bangla Islamic site has about 600K estimated Bangladesh visits in a country of roughly 75M Muslim internet users (see report 01). No dedicated site holds a dominant position against newspapers, YouTube or quran.com. The leaders are also lopsided: muslimbangla is broad but unsourced, while hadithbd is deep but has no prayer times. Volume estimates for the same site differ by 2–3× across tools, so plans should be built on rank order and keyword positions, not on absolute visits. The single most useful next measurement would be first-party data: from a partner site, or from our own site once launched.

Confidence & limitations

- **High:** relative order of Tier 1 vs Tier 2; organic search as the dominant channel; keyword themes.
- **Medium:** implied Bangladesh visits for Tier 1 and 2 (single tool, ambiguous label, ±2–3×).
- **Low:** salat.habibur.com (desktop-only geography, no rank); islamijindegi, quranmazid and islamhouse (tiny or inseparable samples); every global-benchmark Bangladesh figure (upper bounds only).
- **Not fetched (no numbers):** islamicfinder.org, hamariweb.com, timeanddate, salahtimes.com, sunnah.com, assunnahfoundation.org traffic, islamicfoundation.gov.bd, quran.gov.bd (re-verify), islamqa.info/bn, bangla.islamonweb.net, al-itisam.com, tawheederdak.com, ruqyahbd.org, muftialamin.com, wafilife.com, namaz.habibur.com, Priyo Muslim, and newspaper domain totals other than prothomalo.
- **Not on free tiers:** full channel split, top pages, subfolder traffic, and Bangladesh share outside the top 5. Semrush, Hypestat, Siterankdata and Statshow were not tried for most sites. See methodology.

CHAPTER 3

Bangladeshis search Islam in Bangla, by item

ABOUT THIS CHAPTER

In plain words. This is the keyword chapter: what Bangladeshis actually type into Google about Islam, in Bangla script, English and Banglish. It covers all eight topic areas (Quran, Hadith, Dua, Namaz, Q&A, Ramadan and Hajj, Learning, Lifestyle) plus topics that were not on the original list, and it contains the **Top 50 topics** and **Top 100 queries** lists.

Key takeaway. Demand is concentrated in a few big families (dua, dreams, hadith, prayer times, Quran) and spread across thousands of specific items, such as a named surah or a dua for a specific situation, each with a "format word" attached: বাংলা উচ্চারণ (pronunciation), অর্থসহ (with meaning), pdf, audio. Many of the highest-volume items are rated "Easy" to rank for. People also tag their searches with trusted names (a scholar, Islamic Foundation, "দলিলসহ" = with evidence), which shows they distrust anonymous answers.

Why it matters for the product. This chapter tells the content team which pages to create, in what wording, and with which spellings. It is the basis for the site's information structure and its SEO plan.

How to use this chapter. Start with the Top 50 topics for priorities, then use the full keyword database (data/keyword-database.csv, 934 rows) to plan individual pages. Use the spelling-variant table to make sure search recognises every spelling.

Watch out for. Measured volumes (Ahrefs ranges) exist only for Quran, Hadith and Dua. Other categories rely on Trends ratios and autocomplete. Never add the different evidence types together.

Research date: 5 November 2026. Scope: Google search demand in Bangladesh (gl=bd / geo=BD) for Islamic topics in Bangla script, English and Banglish (Bangla typed in Latin letters). This report sits alongside 01-bangladesh-islamic-digital-market.md, 02-top-islamic-websites-bangladesh.md, 04-user-search-intent-and-behavior.md, 05-competitor-feature-analysis.md, 06-bangladesh-specific-user-needs.md, 07-content-and-feature-gaps.md, 08-seasonal-search-trends.md and 10-research-methodology-and-sources.md. The row-level data is in data/keyword-database.csv (934 rows).

Key findings

- **Dua, prayer times, dream interpretation and hadith are the four biggest Islamic search families on Google in Bangladesh.** "দোয়া" (dua) averages 2.5x the prayer-time anchor over five years. "স্বপ্নে" (in a dream…) is 1.32x and still rising. "হাদিস" (hadith) is 1.13x and "নামাজের সময়" (prayer time) is the 1.0x anchor. These are Google Trends ratios, not volumes.
- **The highest measured volumes are single, named items with Easy difficulty.** Ayatul Kursi, Surah Mulk, Surah Rahman, Surah Kahf, Sayyidul Istighfar, Dua Qunut and the iftar and tarawih duas each show more than 10,000 searches a month in Ahrefs' Bangladesh estimate. Every one is rated "Easy". Head terms such as "হাদিস" and "কুরআন" are mostly homework and exam-result traffic.
- **Users type an object plus a format word, a ruling word or a year.** Typical shapes are a surah or dua name plus "বাংলা উচ্চারণ" (Bangla pronunciation), "অর্থসহ" (with meaning) or "pdf"; "… কি জায়েজ" (is … permissible?); "… করলে কি গুনাহ হবে" (is it a sin if …?); "… এর নিয়ম" (the rules of …); and "… কত টাকা ২০২৬" (how much in taka, 2026). Many queries name a trusted source inside the query itself: আল কাউসার, ইসলামিক ফাউন্ডেশন, শায়খ আহমাদুল্লাহ.
- **Bangla script dominates and is gaining share. Latin script still leads for surah names.** দোয়া is about 2x Latin "dua". "surah mulk" is about 7x "সূরা মুলক". Bangla নামাজ has nearly caught up with Latin "namaz". The popular spellings beat the scholarly ones by wide margins: দোয়া is about 24x দুয়া and about 300x দুআ; নামাজ is about 18x নামায; জিকির is about 26x যিকির.
- **Google search for Quran, hadith and dua terms fell 30–60% from 2023 to 2026.** The prayer-time anchor itself fell 34%. AI answers appeared on every sampled Google results page. The demand has not necessarily disappeared; some of it has likely moved to AI answers, apps and YouTube.
- **The weakest results pages relative to demand are topic-hadith pages, tools and shareables.** For topic hadith ("মা নিয়ে হাদিস", hadith about mothers), caption sites rank with no Arabic text and no grading. Zakat and faraid calculators are served by foreign or charity tools, "tasbih counter online" returns only English tools, and captions and names come from blogs that cite no sources.
- **Head terms are noisy.** Latin "dua" is polluted by Dua Lipa, "doa" by a university-admission portal, "আমল" by the amla fruit. Some suggestions carry India/West Bengal intent (Kolkata fitra amounts, the Kolkata newspaper Anandabazar in BD results). Any keyword plan has to filter these out first.

Four kinds of evidence, and why they cannot be added together

Every number in this report comes from one of four evidence types. They measure different things, and the ranking lists below mix them, so it helps to know exactly what each one is.

Evidence type	Source and settings	What it tells you	What it does not tell you
`measured_volume`	Ahrefs Free Keyword Generator, Google, country = Bangladesh. Volume buckets (<100, >100, >1,000, >10,000 a month) and a KD label (Easy/Medium/Hard) for about the first 10 rows per seed. 30 seeds run; "dua" and "dua for" returned nothing.	A third-party, modelled estimate of monthly BD Google searches	**Not Google figures.** Not Keyword Planner. Not exact. KD is Ahrefs' backlink-based difficulty, not results-page quality.
`trends_relative`	Google Trends, geo=BD, weekly. Every comparison set included the anchor **"নামাজের সময়" (prayer time) = 1.0x**. Two scales are used: the 52-week mean divided by the anchor's 52-week mean ("x anchor"), and the 5-year mean or peak divided by the anchor's 5-year median week ("x anchor-median") (Trends BD, example set)	Relative interest, comparable across sets through the shared anchor	Not volume. Exact-phrase only. Small phrases round to 0 next to the anchor.
`observed_suggestion`	Google Autocomplete (`suggestqueries.google.com`, gl=bd, hl=bn or hl=en) and YouTube autocomplete, snapshot of **5 Nov 2026** (example)	The query exists and is popular enough to be suggested in BD that day	**No volume.** Suggestions are personalised, IP-sensitive and from one day in the off-season.
`serp_observation`	Google results pages (gl=bd hl=bn, 6 + 34 queries), Bing cc=BD (16), DuckDuckGo kl=bd-en (4), plus page checks of top results	Who ranks, which SERP features appear, on-page quality signals	Not a rank audit. Bing is only a proxy for Google. The Google pages came from one signed-in browser.

The 934 rows split into 594 observed suggestions, 157 Trends rows, 136 Ahrefs rows and 47 SERP observations. **All 136 Ahrefs rows are in Quran, Hadith and Dua/Zikir.** The researcher covering Namaz, Q&A, Ramadan/Hajj, Learning and Lifestyle could not get any free absolute volumes and left those columns as `n/a` rather than estimating them (keyword notes, Q2). Rankings therefore compare Ahrefs buckets in categories A–C with Trends ratios in categories D–H.

For **25 terms we have both measures.** Using the analyst's crosswalk (>10,000 ≈ ≥0.05x anchor; >1,000 ≈ 0.01–0.05x; ≤1,000 ≈ <0.01x), 17 of the 25 land in the same class, 6 are one class apart and 2 are two classes apart. The two outliers are ambiguous head terms: "quran bangla" (0.16x Trends, Ahrefs only >100) and "তাসবিহ" (0.06x, Ahrefs >100), which mostly means the tasbih recited in salah. The crosswalk is good enough to order a list. It is not good enough to convert one measure into the other. Two disagreements matter for planning. "রিজিক বৃদ্ধির দোয়া" (dua for more rizq) is >1,000 in Ahrefs but 0.001x as an exact phrase in Trends. "সকাল সন্ধ্যার দোয়া ও জিকির" (morning and evening adhkar) is >1,000 in Ahrefs while the shorter phrase rounds to 0 in Trends. Both reflect Trends' exact-phrase limit, not a contradiction (Ahrefs সকাল সন্ধ্যার দোয়া; Ahrefs রিজিক বৃদ্ধির দোয়া).

Two earlier figures were re-measured on the same anchor scale and reproduced exactly: আয়াতুল কুরসি at 0.20x and দোয়া at about 2x Latin "dua" (18.67 vs 9.58) (Trends দোয়া vs dua). Earlier research (Nov 4 2026) put দোয়া at about 2.4x the anchor on a 52-week basis. The keyword researcher did not re-verify this, but the seasonal researcher measured a 5-year mean of **2.50x anchor-median** for দোয়া on 5 Nov (Trends T9). The two figures use different statistics, but they agree, so this report treats দোয়া's lead as confirmed.

Demand concentrates in four head families and thousands of named items

On the shared Trends scale, the big Islamic search families in Bangladesh are **dua (2.5x anchor-median), dream interpretation (1.32x), hadith (1.13x), prayer times in Bangla (1.0x) and Banglish (1.06x)**, then Islamic names (0.52x), sehri and iftar times (0.34x and 0.33x, almost all of it in Ramadan) and the generic ruling words হারাম (0.31x), জায়েজ (0.30x) and হালাল (0.20x) (Trends BD 12-m). These head terms carry caveats. "হাদিস" is dominated by definitional homework: its top related query is "হাদিস কি" (what is hadith) (Trends হাদিস related). The ruling words also include non-religious uses. Ahrefs' count of keyword ideas per seed gives a rough sense of breadth: **দোয়া 17,365; হাদিস 10,786; কুরআন 8,391; ayatul kursi 3,207; surah kahf 2,292**, against only 54 for জাল হাদিস (fabricated hadith) (Ahrefs দোয়া; Ahrefs জাল হাদিস).

Beneath the head terms, the measured volume sits in **specific items**. Twelve keywords reach Ahrefs' >10,000 bucket: surah mulk, surah mulk bangla, ayatul kursi, ayatul kursi bangla, আয়াতুল কুরসি, আয়াতুল কুরসি বাংলা উচ্চারণ, surah rahman, surah kahf, সাইয়েদুল ইস্তেগফার, দোয়া কুনুত, ইফতারের দোয়া and তারাবির নামাজের দোয়া. **All twelve are rated KD "Easy"** (Ahrefs ayatul kursi; Ahrefs surah mulk). Sixty more keywords sit in the >1,000 bucket, almost all Easy. They include nearly every format variant of Surah Yasin and Surah

Mulk, short-hadith lists, and situational duas for sleep, waking, janaza, graves, the sick, danger, istikhara, the evil eye, rizq and debt (Ahrefs সূরা ইয়াসিন; Ahrefs ঘুমানোর দোয়া). The combination of high bucket and low difficulty is the clearest acquisition signal in the dataset. It means one well-built canonical page per surah, ayah or dua can compete. A head-term strategy cannot.

Category by category: what people type and where results fail

A. Quran: surah name plus a format word

Dimension	Evidence
Highest demand	ayatul kursi / আয়াতুল কুরসি (>10,000; 0.29x and 0.20x), surah mulk (>10,000; 0.21x), surah rahman (>10,000; 0.12x), surah kahf (>10,000), ইয়াসিন সূরা (0.12x), surah yasin (>1,000, KD Medium) (Trends quran set C)
Long tail	Surah + বাংলা উচ্চারণ / অর্থসহ / আরবি / pdf / লিখিত (written, not video) / সম্পূর্ণ (complete) / ফজিলত (virtue) / তেলাওয়াত (recitation) / ছবি (image) / কত পারায় (which para) / শানে নুযুল; ayah ranges ("সূরা বাকারার শেষ দুই আয়াত", the last two ayat of al-Baqarah; "সূরা হাশরের শেষ তিন আয়াত"; "surah kahf first 10 ayat", >1,000); user-named bundles (তিন কুল, চার কুল, ছোট ১০ সূরা) (Autocomplete সূরা ইয়াসিন)
Question patterns	"কোন সূরার আয়াত" (which surah is this ayah from), "কত পারায়", "কুরআন শরীফের বাংলা অর্থ কি" (+500% rising) (Trends কুরআন related)
Rising	সূরা ফুরকানের ৭৪ নাম্বার আয়াত (+150%; the "রাব্বানা হাবলানা" dua for spouse and children), সূরা ইনশিরাহ বাংলা উচ্চারণ (+120%), তিন কুল সূরা (+100%) (Trends সূরা related)
Seasonal	Most Quran terms peak in Ramadan or Shab-e-Barat weeks; ইয়াসিন সূরা's 5-year peak fell in Shab-e-Barat week 2023; Surah Kahf is Friday-driven (see 08)
Underserved	Quran-verse pages with no real Arabic text (Bing #1 for সূরা হাশরের শেষ তিন আয়াত had 0 Arabic characters and about 38 ad-script references); translation PDFs served from file hosts; no hifz tool ranks (Bing সূরা হাশরের শেষ তিন আয়াত; Google কুরআন শরীফ বাংলা অনুবাদ pdf; Bing কুরআন হিফজ)

The head term "কুরআন" behaves differently from surah queries. Its top related queries are institutions and exams: তালিমুল কুরআন 100, নূরানী তালিমুল কুরআন বোর্ড 73. Its rising queries are almost all **Quran-board results** ("হুফফাজুল কুরআন ফাউন্ডেশন রেজাল্ট 2026", Breakout) (Trends কুরআন related). Audio intent is YouTube-shaped: "সূরা ইয়াসিন তেলাওয়াত মধুর কন্ঠে" (Surah Yasin recited in a sweet voice), "quran tilawat for sleep", and named reciters (YouTube autocomplete).

B. Hadith: short shareable hadith and topic lists, not collection browsing

Dimension	Evidence
Highest demand	হাদিস (1.13x; Ahrefs >1,000, KD Medium); hadis 0.22x; hadith 0.21x; হাদীস 0.17x; Ahrefs >1,000 for হাদিসের বাণী (sayings of hadith), ছোট হাদিস (short hadith), শিক্ষামূলক ছোট হাদিস (educational short hadith), ১০০ টি ছোট হাদিস (100 short hadith), ছোট ছোট হাদিস পোস্ট (short hadith posts), ইসলামিক হাদিস, শবে বরাতের ফজিলত সম্পর্কে হাদিস (hadith on Shab-e-Barat's virtue) (Ahrefs হাদিস)
Long tail	" নিয়ে হাদিস" (hadith about): মা (mother), বাবা মা, নামাজ, রোজা, বিয়ে, ধৈর্য (patience), রিজিক, দাড়ি (beard), পর্দা, বন্ধু (friend), মৃত্যু, জান্নাত; almost every topic also has a ক্যাপশন / ছবি / আরবি variant; Banglish forms (ma niye hadis, biye niye hadis) (Autocomplete মা নিয়ে হাদিস)
Question patterns	Number look-ups ("সহিহ বুখারী" completes to hadith numbers such as ৫৬২২, ৫৭৮৭; "bukhari sharif 29 number hadees"), which suggests people verifying a citation they saw elsewhere; definitional "কাকে বলে / কত প্রকার" (Autocomplete সহিহ বুখারী)
Rising	ভূমিকম্প নিয়ে হাদিস (hadith on earthquakes; Breakout), রজব মাসের ফজিলত সম্পর্কে আরবি হাদিস (+2,000%), তাবিজ নিয়ে হাদিস (hadith on amulets; +80%) (Trends হাদিস related)
Seasonal	"হাদিস" peaked in Shab-e-Barat week 2024 (index 77)
Underserved	Topic-hadith SERPs: caption sites rank #1 (caption.com.bd with 0 Arabic characters and about 28 ad-script references; bd24live with 1 reference and about 44 ad-script references). Library queries ("সহিহ বুখারী বাংলা", "hadith bangla") are well served by hadithbd and ihadis (Bing মা নিয়ে হাদিস; Bing রিজিক নিয়ে হাদিস; Bing সহিহ বুখারী বাংলা)

Collection browsing and authenticity checking are **measurably small on Google**. বুখারী শরীফ (Bukhari) is >100 in Ahrefs and 0.03x in Trends. মুসলিম শরীফ (Muslim) is >100 and 0.005x. **জাল হাদিস (fabricated hadith) and every authenticity variant are below 100 searches a month** (Ahrefs জাল হাদিস). Authenticity matters for trust, as 04 shows, but it does not drive traffic. The first completion for Latin "hadith" is **hadithbd**, a navigational incumbent (Autocomplete hadith).

C. Dua and zikir: life situations, bundles and trusted names

Dimension	Evidence
Highest demand	দোয়া (2.5x anchor-median); দোয়া কুনুত, সাইয়েদুল ইস্তেগফার, ইফতারের দোয়া, তারাবির নামাজের দোয়া (all >10,000, Easy); dua for (0.12x); জিকির (>1,000; 0.08x, flat 2023–2026)
Long tail	Situations: sleep, waking, after salah, janaza, the grave, the sick, danger, istikhara, evil eye, rizq, debt, headache, anxiety. Proxy searching for family members: "স্বামীর রিজিক বৃদ্ধির দোয়া" (dua for my husband's rizq; >100). Bundles: "সকাল সন্ধ্যার দোয়া ও জিকির" (morning and evening; >1,000), "ঘুমানোর আগে কি কি দোয়া পড়তে হয়" (which duas before sleep) (Autocomplete রিজিক বৃদ্ধির দোয়া)
Question patterns	"কতবার পড়তে হয়" (how many times), "কখন পড়তে হয়" (when), "সঠিক উচ্চারণ / সঠিক বানান" (correct pronunciation or spelling), "কোন সুরার আয়াত" (which surah). The last is a misconception for Sayyidul Istighfar, which is a hadith in Bukhari, yet the query reaches >100 (Autocomplete সাইয়েদুল ইস্তেগফার)
Trusted names typed into the query	শায়খ আহমাদুল্লাহ, আস সুন্নাহ ফাউন্ডেশন, আল কাউসার, মিজানুর রহমান আজহারী, আবু বকর যাকারিয়া (Hisnul Muslim translator) (Autocomplete সকাল সন্ধ্যার দোয়া)
Rising (Latin dua)	"allahumma innaka afuwwun tuhibbul full dua" (Breakout), earthquake dua (+300%), sohobas korar dua (dua before intimacy; +250%), arafah day dua (+140%), bod nojor er dua (evil eye; +90%) (Trends dua related)
BD-specific	A Sufi-order zikir layer: আটরশি জিকির (Atroshi; related index 38), তাহেরি জিকির 25, চরমোনাই জিকির (Charmonai) 21 (Trends জিকির related)
Underserved	News-portal dua pages without grading (jagonews24 #1 for ঋণ মুক্তির দোয়া, debt dua); ad-heavy blogs (namerorthobangla, about 69 ad-script references); **"tasbih counter online": only global English tools rank, no Bangla tool** (Bing tasbih counter online; Bing সকাল সন্ধ্যার দোয়া ও জিকির)

"তাসবিহ" mostly means the tasbih recited in salah. Its top related queries are নামাজের তাসবিহ (100), সালাতুত তাসবিহ (55) and রুকুর তাসবিহ (the tasbih in ruku). Counter queries are mostly **shopping for a device** ("digital tasbih price in bangladesh", "zikr ring price in bangladesh") (Trends তাসবিহ related; Autocomplete ডিজিটাল তাসবিহ). The best-quality dua page observed, a muslimbangla.com Q&A on anxiety with 0 ad-script references and 8 references, ranked #1 for a query that Ahrefs puts below 100 a month (Bing দুশ্চিন্তা দূর করার দোয়া).

D. Namaz: times by district, rules by situation, rulings by madhhab

Dimension	Evidence
Highest demand	namaz time 1.06x; নামাজের সময় 1.00x; নামাজের নিয়ম (rules of salah) 0.26x; নামাজের সময়সূচি (prayer timetable) 0.23x; নামাজের নিয়ত (salah niyat) 0.19x; তাহাজ্জুদ 0.16x (Trends BD 12-m)
Long tail	Times down to district, upazila and neighbourhood ("নামাজের সময়সূচি বিনোদপুর রাজশাহী", "আজকের নামাজের সময়সূচি নেত্রকোনা"); start **and** end of each waqt; forbidden times ("নামাজের নিষিদ্ধ সময় কয়টা থেকে কয়টা পর্যন্ত ২০২৬", forbidden times from when to when, 2026) (Autocomplete নামাজের সময়সূচি সিলেট)
Question patterns	Mistake handling ("নামাজের মধ্যে ভুল হলে কি করনীয়", what to do if I make a mistake in salah); rakat counts; "সুন্নত নামাজ না পড়লে কি গুনাহ হবে" (is it a sin to skip sunnah prayers); women's salah "দলিলসহ" (with evidence) (Autocomplete মহিলাদের নামাজের নিয়ম)
Madhhab and incumbent tags	"namaz time dhaka today hanafi", "prayer time dhaka salafi", "আহলে হাদিস নামাজের সময়সূচী রাজশাহী 2026", "namaz time dhaka habibur", "prayer time dhaka islamic foundation pdf" (Autocomplete namaz time dhaka; Autocomplete prayer time dhaka)
Rising	বাসর রাতের নামাজের নিয়ম (wedding-night prayer; Breakout), মহিলাদের শবে কদরের নামাজের নিয়ম (+600%), জানাজার নামাজের নিয়ম ও দোয়া (+130%) (Trends নামাজের নিয়ম related)
Underserved	"নামাজের নিয়ম" results are mostly SEO blogs; women's salah results mix muslimbangla with Facebook and a tech blog; video-heavy SERPs for "namaz er niyom" (16 YouTube links) (Google মহিলাদের নামাজের নিয়ম; DDG নামাজের নিয়ম)

E. Q&A (masala and fatwa): seven question templates

Dimension	Evidence
Highest demand	হারাম 0.31x, জায়েজ 0.30x, তালাক (divorce) 0.23x, হালাল 0.20x, যাকাত 0.16x, ফিতরা 0.083x (generic words; their true Q&A share is lower)
Top "জায়েজ" questions	স্ত্রীর দুধ খাওয়া কি জায়েজ (100), জন্মদিন পালন করা কি জায়েজ (birthdays; 69), হিল্লা বিয়ে (65), টিকটিকি মারা (killing lizards; 48), ঈদে মিলাদুন্নবী পালন করা (37), মানত (36), মিলাদ (32), ভোট দেওয়া (voting; 29, +80%), গায়েবানা জানাজা (funeral prayer in absentia; Breakout) (Trends জায়েজ related)

Dimension	Evidence
Clusters	Food (octopus, snails, rabbit, crab, kangaroo); finance (bank interest, Islami Bank DPS, FDR, insurance, shares, Quotex/forex, crypto, freelancing, YouTube income); divorce in anger; women's masail; inheritance; fasting medical cases (Autocomplete ইসলামী ব্যাংকে টাকা রাখা; Autocomplete রোজা অবস্থায়)
Rising	কত টাকা হলে যাকাত দিতে হবে ২০২৬ (how much money makes zakat due, 2026; Breakout), নগদ কত টাকা থাকলে যাকাত দিতে হবে (+200%), যাকাত ক্যালকুলেটর বাংলাদেশ (+120%), খোলা তালাক কি (+50%) (Trends যাকাত related; Trends তালাক related)
Underserved	Fragmented SERPs: muslimbangla appears in 12 of 34 sampled; Facebook posts dominate fiqh SERPs; Ahl-e-Hadith monthlies (at-Tahreek, al-Itisam) and Hanafi sources (Al-Kawsar, Ahle Haq Media) answer the same question with no madhhab labelling; calculators are foreign or charity tools (Google যাকাত ক্যালকুলেটর; Google ফারায়েজ ক্যালকুলেটর)

Two autocomplete seeds came back empty, which is itself informative: "হস্তমৈথুন" (masturbation; likely filtered) and natural-language inheritance questions such as "মেয়েরা বাবার সম্পত্তি কত পাবে" (how much will daughters inherit) (Autocomplete হায়েজ অবস্থায়; Autocomplete ফারায়েজ ক্যালকুলেটর). Google underrepresents these private questions, but they are not small. Earlier research (Nov 4 2026) found that IslamQA Bangla's two most-read answers concern sexual purity and masturbation, at about 223,600 and 222,700 reads (IslamQA Bangla).

F. Ramadan and Hajj: utilities, dates and costs

Dimension	Evidence
Highest demand	সেহরির শেষ সময় 0.34x, ইফতারের সময় 0.33x (52-week means that fall almost entirely in Ramadan); শবে বরাত 0.18x; রোজার নিয়ত 0.071x; ইফতারের দোয়া and তারাবির নামাজের দোয়া (>10,000); রমজানের ক্যালেন্ডার 0.042x
Long tail	Calendars by district with "ইসলামিক ফাউন্ডেশন" and "ডিজাইন" (design) modifiers; neighbourhood-level times ("sehri time today mirpur", "iftar time dhaka countdown") (Autocomplete iftar time dhaka)
Dates asked months ahead	On 5 Nov 2026 autocomplete already offers রমজানের ক্যালেন্ডার ২০২৭, শবে বরাত ২০২৭ কত তারিখে বাংলাদেশ, ঈদুল ফিতর ২০২৭ কত তারিখে বাংলাদেশ (Autocomplete রমজানের ক্যালেন্ডার)
Hajj and Umrah	Packages, registration deadlines and visas: "হজ্জ নিবন্ধন 2027 শেষ তারিখ" (Hajj registration 2027 last date), "hajj package 2027 bangladesh price for family", "ওমরাহ ভিসা ফি কত 2026"; a news headline surfaced as a suggestion ("নিবন্ধন শেষ হচ্ছে ২৪ সেপ্টেম্বর সময় আর বাড়বে না", registration ends 24 September, no extension) (Autocomplete হজ নিবন্ধন)
Spelling	কোরবানির dominates suggestions over কুরবানির; "কুরবানির নিয়ম" is only 0.002x
Underserved	Hajj SERPs are TV-channel YouTube plus agencies; "হজ" related queries are homework ("হজ কি" 100, "বিদায় হজ রচনা") (Trends হজ related; Google হজ প্যাকেজ ২০২৭)

The Trends sets for Hajj and Umrah package terms failed three times with HTTP 429. Their demand rests on autocomplete and SERP evidence alone. The seasonal pull shows registration and package terms at near zero (peak 0.03–0.08x anchor-median); see 08.

G. Learning: books, homework and children

Dimension	Evidence
Highest demand	কালেমা 0.059x; আল্লাহর ৯৯ নাম (99 names of Allah) 0.030x; আরবি শিক্ষা (learning Arabic) 0.012x; ইসলামিক বই pdf 0.002x; নবীদের কাহিনী (prophets' stories), ইসলামিক কুইজ and ইসলামিক সাধারণ জ্ঞান (Islamic general knowledge) all about 0
Long tail	Free PDFs and piracy ("ইসলামিক বই pdf download / free / telegram"); school and exam work ("ইসলাম শিক্ষা বই নবম শ্রেণি ২০২৬", Islamic studies textbook class 9; "শিরক কাকে বলে কত প্রকার ও কি কি") (Autocomplete ইসলামিক বই pdf; Autocomplete ইসলাম শিক্ষা বই)
Children	"শিশুদের ইসলামিক শিক্ষা" (Islamic education for children) returned **no suggestions**; parents type বাচ্চাদের ইসলামিক নাম / গল্প / কার্টুন instead
Contested history and eschatology	"দাজ্জাল এখন কোথায় আছে" (where is Dajjal now), "ইমাম মাহদীর আগমন ২০২৮" (Imam Mahdi's coming in 2028) (Autocomplete ইমাম মাহদী)
Underserved	Book SERPs are Pinterest, Internet Archive and Facebook PDF groups; prophets' stories are video-led (19 YouTube links); children's learning returns Facebook, Quora and Academia.edu (Google ইসলামিক বই pdf; Google শিশুদের ইসলামিক শিক্ষা)

H. Lifestyle: names, captions and family rights

Dimension	Evidence
Highest demand	ইসলামিক নাম 0.52x (the largest lifestyle term); ইসলামিক ক্যাপশন 0.13x; ইসলামিক স্ট্যাটাস 0.078x (declining); ইসলামিক পিক 0.061x; তওবা 0.059x; জুম্মা মোবারক 0.036x; ইসলামিক উক্তি (quotes) 0.035x

Dimension	Evidence
Long tail	Names by gender, by first letter ("স দিয়ে", starting with S), with meaning, year-tagged ("অর্থসহ ২০২৬"), from the Quran, for twins; single-name meaning look-ups ("আয়ান নামের ইসলামিক অর্থ কি") (Trends ইসলামিক নাম related; Autocomplete নামের ইসলামিক অর্থ)
Captions	ইসলামিক ক্যাপশন বাংলা (100), সকাল নিয়ে (about the morning; 48), আরবি (31), রাত নিয়ে (about the night; 21), রমজান নিয়ে (+300% rising) (Trends ইসলামিক ক্যাপশন related)
Rising	ছেলেদের ইসলামিক নাম অর্থসহ ২০২৬ (boys' names with meaning 2026; Breakout); ও দিয়ে (+60%) and খ দিয়ে (+50%) boys' names
Underserved	Captions: Pinterest, Medium, SEO caption blogs, **none citing a source for the quoted hadith or ayah**; names: HadithBD, Facebook story pages and FirstCry (an Indian parenting site) (Google ইসলামিক ক্যাপশন; Google মেয়েদের ইসলামিক নাম অর্থসহ)

Earlier research (Nov 4 2026) recorded "ইসলামিক স্ট্যাটাস" collapsing from an index of 9 in 2023 to 2 in 2026. The 5 Nov figure of 0.078x confirms a small and shrinking term (earlier Trends pull). The hypothesis that caption demand is "huge" holds only partly on Google. That demand probably lives on Facebook and Pinterest, which were not measured.

New topics: dreams outrank prayer times

Topic	Evidence
Dream interpretation	**স্বপ্নে = 1.32x anchor, larger than prayer times**, peak week Sep 27–Oct 3 2026. Top related: স্বপ্নে মাছ দেখলে কি হয় (seeing fish in a dream; 100), সাপ (snake; 78), বিয়ে (marriage; 70), বাচ্চা (a baby; 61). Rising: স্বপ্নের ব্যাখ্যা জানতে চাই (I want a dream interpretation; +200%). SERP includes Facebook, Quora and **Anandabazar Patrika (Kolkata)** (Trends স্বপ্নে related; Google স্বপ্নে সাপ দেখলে কি হয়)
Aqiqah	0.076x, peak week May 24–30 2026 (just before Eid-ul-Adha); questions about timing, meat distribution and "আকিকা না দিলে কি হয়" (what if aqiqah is not given) (Google আকিকার নিয়ম)
Ruqyah, evil eye, jinn	রুকইয়াহ 0.005x on Google, but the most video-heavy SERP sampled (33 YouTube links); queries are navigational to brands and centres ("ruqyah support bd", "ruqyah center uttara") (Google রুকইয়াহ)
Death rites and circumcision	কবর জিয়ারতের নিয়ম ও দোয়া, চল্লিশা করা কি জায়েজ, মৃত ব্যক্তির জন্য দোয়া স্ট্যাটাস; সুন্নতে খাতনা ছবি / কেক ডিজাইন / কার্ড (observed only; no Trends data)
Fact-check demand	"৮০ বছরের গুনাহ মাফের দোয়া" (dua that forgives 80 years of sins; Trends related index 8 under গুনাহ), "জুমার নামাজ ২২ রাকাত কি কি" (what are the 22 rakat of Jumu'ah), "জান্নাতের সুসংবাদ প্রাপ্ত ৪১ জন সাহাবীদের নাম" (names of 41 companions promised paradise), "ইমাম মাহদীর আগমন ২০২৮", "গর্ভাবস্থায় কোন মাসে কোন সূরা পড়তে হয়" (which surah to read in which month of pregnancy) (Trends গুনাহ related; Autocomplete গর্ভাবস্থায়)

Earlier research (Nov 4 2026) also measured dream searches peaking **05:00–08:00 BD time**, right after waking. It recorded the "স্বপ্নে" yearly mean rising from 16 (2021) to 40 (2026) within its set, the only major Islamic term at an all-time high (Trends BD).

Seven question templates organise most Q&A demand

Q&A queries in Bangla follow a small number of fixed shapes. Each shape calls for a predictable answer format. Together they also show users checking whether something is allowed, whether it is a sin, and who says so.

Template	Example queries (gloss)	Evidence
Ruling: "... কি জায়েজ / হারাম / হালাল নাকি হারাম / জায়েজ কিনা"	জন্মদিন পালন করা কি জায়েজ (is celebrating birthdays permissible); অক্টোপাস হালাল নাকি হারাম; তাবিজ দেওয়া কি জায়েজ (amulets); প্রেম করা কি হারাম (is romance haram)	Trends জায়েজ related; Autocomplete দেওয়া কি জায়েজ
Sin-check: "... করলে / না পড়লে / না দিলে কি গুনাহ হবে"	সুন্নত নামাজ না পড়লে কি গুনাহ হবে (Trends related 8); তারাবির নামাজ না পড়লে কি গুনাহ হবে (7); কুরবানি না করলে কি গুনাহ হবে; পরীক্ষায় নকল করলে (cheating in exams)	Autocomplete করলে কি গুনাহ হবে; Trends গুনাহ related
Validity: "... দিলে কি নামাজ হবে / তালাক হয়"	নেইল পলিশ দিলে কি নামাজ হয় (is salah valid with nail polish); চুল কালার করলে কি নামাজ হবে; রাগের মাথায় তালাক দিলে কি তালাক হয় (does divorce in anger count)	Autocomplete নেইল পলিশ
How-to: "... এর নিয়ম / পড়ার নিয়ম / নিয়ম ও দোয়া / নিয়ম ও নিয়ত"	নামাজের নিয়ম (0.26x); তাহাজ্জুদ নামাজের নিয়ম (related 100); জানাজার নামাজের নিয়ম ও দোয়া (+130%); কোরবানির ভাগের নিয়ম (rules for shares in Qurbani)	Trends নামাজের নিয়ম related
List or count: "... কয়টি ও কি কি / কত রাকাত / কত প্রকার"	নামাজ ভঙ্গের কারণ ১৯টি (19 things that break salah); নামাজের ওয়াজিব ১৪ টি; অজু ভঙ্গের কারণ কয়টি ও কি কি; মাখরাজ ১৭ টি (often homework)	Autocomplete নামাজ ভঙ্গের কারণ

Template	Example queries (gloss)	Evidence
Amount or date this year: "… কত টাকা ২০২৬ / কবে ২০২৭ / কত তারিখে বাংলাদেশ"	ফিতরা কত টাকা ২০২৬ ইসলামিক ফাউন্ডেশন (0.033x); যাকাতের নিসাব কত টাকা ২০২৬; রোজার কাফফারা ২০২৬ কত টাকা; শবে বরাত ২০২৭ কত তারিখে বাংলাদেশ	Autocomplete ফিতরা কত টাকা; Autocomplete রোজা অবস্থায়
Authority-tagged: "… আল কাউসার / শায়খ আহমাদুল্লাহ / মিজানুর রহমান আজহারী / আহলে হক মিডিয়া / দলিলসহ / সহীহ হাদিস / হানাফি / আহলে হাদিস"	মহিলাদের নামাজের নিয়ম আল কাউসার; ব্যাংকে চাকরি হালাল না হারাম আহমাদুল্লাহ; জুমার নামাজ কত রাকাত সহীহ হাদিস; বিতর নামাজের নিয়ম আহলে হাদিস; হানাফি ও মোহাম্মদী পার্থক্য	Autocomplete মহিলাদের নামাজের নিয়ম; Autocomplete হানাফি

The authority tags matter most. Users do not trust anonymous answers. They go looking for a **person, a publication or a school**, and results pages give them conflicting rulings with no labels. Earlier research (Nov 4 2026) adds that a viewer asked Shaykh Ahmadullah on a live programme whether calling Milad a bid'ah makes someone a kafir (Jugantor). The sectarian flashpoints visible in the "জায়েজ" list (Milad, mazar, tabiz, pir) are live public debates, not just search curiosities.

Spelling variants: label with the popular form, match every form

Bangla spelling is not standardised for Arabic-origin religious words, and the gaps are large. The ratios below are Trends 52-week means within the same comparison set unless noted.

Concept	Dominant form	Variant(s)	Ratio	Source
Dua	**দোয়া** 18.67	দুয়া 0.77; দুআ 0.06; দোআ 0.00	দোয়া ≈ 24x দুয়া, ≈ 300x দুআ; দোআ autocompletes to soil science (দোআঁশ মাটি)	Trends দোয়া spellings; Autocomplete দোআ
Quran	**কুরআন** 12.77 ≈ **কোরআন** 11.13	কোরআন শরীফ 1.81 vs কুরআন শরীফ 1.10	Near parity (1.15x), but **reversed with শরীফ** (কোরআন শরীফ 1.6x); YouTube completions favour কোরআন	Trends Quran spellings
Namaz	**নামাজ** 16.37	নামায 0.92; সালাত 1.06	নামাজ ≈ 18x নামায, ≈ 15x সালাত	Trends namaz spellings
Surah	**সূরা** 35.33	সুরা 19.75	≈ 1.8x	Trends surah spellings
Kahf	**সূরা কাহাফ** 1.33	সূরা কাহফ 0.06	≈ 20x (52-week); ≈ 40x on Fridays in daily data (13.2 vs 0.3)	Trends quran set B; Trends TD daily
Hadith	**হাদিস** 35.19	হাদীস 5.33	≈ 6.6x	Trends hadith spellings
Zikir	**জিকির** 2.63	যিকির 0.10	≈ 26x	Trends zikir set
Mulk	সূরা মূলক 25 ≈ সূরা মুলক 24		Parity (related-query index)	Trends সূরা related
Witr	বেতের 22 ≈ বিতর 20		Parity (related-query index under নামাজের নিয়ম)	Trends নামাজের নিয়ম related
Qurbani, wudu, timetable	কোরবানির over কুরবানির; অজু / ওযু both round to 0 as phrases; সময়সূচি / সময়সূচী both suggested		Qualitative (autocomplete)	Autocomplete অজুর নিয়ম
Latin script	quran; surah 37.04 vs sura 20.00; namaz 17.96 vs salah 2.67; dua 9.58 vs doa 1.42, dowa 1.12, duya 0.44 (dowa and duya rising from 0 in 2021); hadis 6.79 ≈ hadith 6.58			Trends dua Latin

Banglish transliteration is chaotic: uccharon / ucharan / uccaron; anubad / onubad / torjoma; ortho / ortho soho; sorif / sharif; rijik / rizik / rizq; jikir / zikir / zikr / dhikr (Autocomplete sura yasin bangla). Typing দোয়া with the precomposed character or with the decomposed য + ◌ো produces identical Trends series, so Google normalises Unicode. A site's own search has to do the same. The practical rule follows from the ratios: **use the popular spelling as the visible label** (দোয়া, নামাজ, সূরা, হাদিস, জিকির, কাহাফ) and treat the scholarly forms (দুআ, নামায, সালাত, হাদীস, যিকির) as search aliases. Search should tolerate spelling variants across Bangla script and transliteration variants across Banglish. 05 shows that most incumbents fail at this.

Script split: Latin wins surah names, Bangla wins duas

The two scripts do not split the same way across topics. For **surah names, Latin script leads**: "surah mulk" is about 7x "সূরা মুলক" on Trends, and Ahrefs puts surah mulk at >10,000 against >1,000 for সূরা মুলক (Trends quran set A; Ahrefs surah mulk). Ayatul Kursi is closer: ayatul kursi 0.29x against আয়াতুল কুরসি 0.20x, with both in the >10,000 bucket. For **duas, Bangla script leads**, with দোয়া about 2x Latin "dua". For the generic words the scripts are near parity and converging. Latin "surah" (37.04) is just ahead of সূরা (35.33), but it fell from 49.9 in 2023 to 36.4 in 2026 while সূরা held at 35–38. Latin "namaz" fell from 31.2 to 18.0 while নামাজ rose from 9.1 (2021) to 17.0 (2026) (Trends namaz spellings). Latin "quran" (23.85) still about matches কুরআন and কোরআন combined (23.9), but it is the one falling. Banglish persists mainly for **times** ("namaz time dhaka", "iftar time today mirpur"), packages, baby names and captions. Of the 582 rows in the Namaz-to-Lifestyle scope, 498 are Bangla script, 34 Banglish, 26 English and 24 mixed. That split reflects the seeds chosen as much as demand.

The planning implication is that a Bangla-first site still needs **Latin-script slugs, titles and aliases for surah and ayah pages**, because that is where the largest measured volumes sit. Dua and Q&A pages can be Bangla-only in their visible text, provided search accepts Banglish input.

Google demand fell 30–60% from 2023 to 2026, except a few Bangla terms

Comparing yearly Trends means in the same set, nearly every Quran, hadith and dua term declined between 2023 and 2026:

Term	2023	2026	Change
নামাজের সময় (anchor)	46.7	30.6	−34%
আয়াতুল কুরসি	14.3	6.1	−57%
ayatul kursi	20.3	8.7	−57%
surah mulk	11.9	6.4	−46%
surah rahman	7.3	3.7	−49%
ইয়াসিন সূরা	5.1	3.7	−27%
সাইয়েদুল ইস্তেগফার	4.7	1.7	−64%
ঘুমানোর দোয়া	1.9	0.9	−53%
বুখারী শরীফ	2.2	0.9	−59%
quran bangla	8.6	5.0	−42%
Flat or rising: জিকির	2.6	2.7	+4%
hadis	6.5	6.8	+5%
বাংলা উচ্চারণ (generic "Bangla pronunciation")	32.7	35.4	+8% (21.0 in 2021)
নামাজ	16.3	17.0	+4% (9.1 in 2021)

Source: (Trends quran set C; Trends hadith set). The 2026 mean covers January to early November and includes Ramadan, so the comparison is not biased against 2026. The seasonal pull also found the yearly peak of "নামাজের সময়" falling from 37 to 24 and the peak for "দোয়া" from 100 to 52 between 2023 and 2026 (Trends T9).

The cause is not measured. The most likely contributor is visible on the results page itself: **an AI-generated answer sat above the results on all 6 Google SERPs sampled**, and 5 of 6 showed a YouTube video block with view counts in the lakhs (Google সূরা ইয়াসিন বাংলা উচ্চারণ). A simple "text of X" query is increasingly answered on the results page. Other plausible causes are migration to apps and YouTube, and phrasing drift toward Bangla script. **[Inferred]** The decline favours pages that offer something an AI summary cannot: synced audio, counters, routines, memorisation, verification and correction. Plain text pages are the least defensible.

Noise filters: Dua Lipa, a university portal and Kolkata

Several head terms are unusable without a modifier or a filter:

Noise source	Example	Evidence
Celebrity	"dua lipa" is the #3 related query for Latin "dua" (index 23)	Trends dua related
Government portal	"doa" completes to doa.teletalk.com.bd, a university-admission portal	Autocomplete doa
Everyday words	আমল → আমলকি (amla fruit); amol → AMOLED; সবর → সবরি কলা (a banana); মদ → মদিনা; জিন → জিনসেং (ginseng); sud → sudoku; হজ → হজম (digestion); দোআ → দোআঁশ মাটি (loam soil)	Autocomplete আমল
Films and names	"মায়ের মর্যাদা" (a mother's status) mixes hadith with a Bangla film of the same name; "আরাফার দিনের দোয়া" mixes with the personal name Arafat	Autocomplete মায়ের মর্যাদা
India / West Bengal	"ফিতরা কত টাকা ২০২৬ কলকাতা" (fitra amount, Kolkata), "zakat calculator india", "ramadan time table 2027 mumbai/kolkata", "iftar dua in hindi/tamil"; Anandabazar (Kolkata) ranks for a BD dream query; FirstCry (India) ranks for girls' names	Autocomplete ফিতরা কত টাকা
Pakistan, Gulf and others	"quran mp3 with urdu translation", "quran hifz karne ki dua", "tasbeeh counter price in pakistan", "tawbah dua in tamil / malayalam"; Turkish and Malay completions for "kaza namaz" and "যাকাত ফিতরা"	Autocomplete tawbah dua
Homework and institutions	হাদিস কি, হজ কি, যাকাত কি; Quran-board results; বিদায় হজ রচনা ৫ম শ্রেণি (an essay for class 5)	Trends হজ related

These rows are flagged in data/keyword-database.csv and are not counted as BD-specific evidence. Homework queries are different. They are real Bangladeshi demand from students and madrasa learners. They are a distinct audience segment, not daily practice.

Top 50 Islamic search topics in Bangladesh

How this list was ranked. Topics are clusters of related queries, ordered by the strongest available signal for any query in the cluster. Signals are ordered as follows: Trends ratio against the prayer-time anchor first (52-week mean, or 5-year mean against the anchor median where marked), then the Ahrefs bucket, then observed evidence only. To merge the two measured types, the analyst crosswalk above treats >10,000 as roughly ≥0.05x and >1,000 as roughly 0.01–0.05x. **The ranking therefore mixes evidence types.** It is an ordinal guide, not a volume estimate. Seasonal topics are ranked by their 52-week mean, which understates how sharp their peaks are; 08 covers the peaks.

Rank	Topic	Example queries (gloss)	Evidence basis	Strongest signal
1	Dua (general and situational)	দোয়া; dua for; দোয়া কুনুত	Trends + Ahrefs	2.50x anchor-median (5-yr mean); 17,365 Ahrefs ideas
2	Dream interpretation	স্বপ্নে মাছ দেখলে কি হয় (seeing fish in a dream)	Trends	1.32x, rising
3	Hadith (head term, short and shareable hadith)	হাদিস; ছোট হাদিস (short hadith)	Trends + Ahrefs	1.13x; >1,000
4	Prayer times (Bangla and Banglish, by district)	নামাজের সময়; namaz time; নামাজের সময়সূচি ঢাকা	Trends	1.00x + 1.06x + 0.23x
5	Quran (general, translation, sharif)	কুরআন; quran; কোরআন শরীফ	Trends + Ahrefs	0.62x anchor-median; >1,000
6	Islamic baby names	ইসলামিক নাম মেয়েদের (girls' Islamic names)	Trends	0.52x
7	Sehri and iftar times	সেহরির শেষ সময়; ইফতারের সময়	Trends	0.34x / 0.33x (Ramadan only)
8	Halal/haram/permissibility rulings	... কি জায়েজ; ... হালাল নাকি হারাম	Trends (generic words)	0.30–0.31x
9	Ayatul Kursi	ayatul kursi; আয়াতুল কুরসি বাংলা উচ্চারণ	Ahrefs + Trends	>10,000; 0.29x
10	How to pray (rules of salah)	নামাজের নিয়ম; namaz porar niyom	Trends	0.26x
11	Divorce (talaq)	তালাক; রাগের মাথায় তালাক (divorce in anger)	Trends	0.23x
12	Surah Mulk	surah mulk; সূরা মুলক বাংলা উচ্চারণ	Ahrefs + Trends	>10,000; 0.21x
13	Salah niyat	নামাজের নিয়ত আরবি বাংলা	Trends	0.19x
14	Shab-e-Barat	শবে বরাত ২০২৭ কত তারিখে বাংলাদেশ	Trends	0.18x (peak 6.3x anchor-median)
15	Tahajjud	তাহাজ্জুদ নামাজের নিয়ম	Trends	0.16x
16	Zakat	যাকাত; কত টাকা হলে যাকাত দিতে হবে ২০২৬	Trends	0.16x; rising Breakout
17	Islamic captions, status and pictures	ইসলামিক ক্যাপশন বাংলা	Trends	0.13x + 0.078x + 0.061x

Rank	Topic	Example queries (gloss)	Evidence basis	Strongest signal
18	Surah Rahman	surah rahman; সূরা আর রহমান	Ahrefs + Trends	>10,000; 0.12x
19	Surah Yasin	ইয়াসিন সূরা; সূরা ইয়াসিন বাংলা উচ্চারণ	Trends + Ahrefs	0.12x; many >1,000 variants
20	Surah Kahf (Friday)	surah kahf; সূরা কাহাফ	Ahrefs + Trends	>10,000; Friday 25–45x
21	Dua Qunut	দোয়া কুনুত বাংলা উচ্চারণ	Ahrefs + Trends	>10,000; 0.080x
22	Ramadan duas (iftar, tarawih, sehri)	ইফতারের দোয়া; তারাবির নামাজের দোয়া	Ahrefs	>10,000
23	Istighfar and tawbah	সাইয়েদুল ইস্তেগফার; তওবা করার দোয়া	Ahrefs + Trends	>10,000; 0.05x / 0.059x
24	Fitra	ফিতরা কত টাকা ২০২৬ ইসলামিক ফাউন্ডেশন	Trends	0.083x
25	Zikir (including Sufi-order zikir)	জিকির; আটরশি জিকির	Ahrefs + Trends	>1,000; 0.08x
26	Tafsir	তাফসীর ইবনে কাসীর	Trends + Ahrefs	0.08x; >100
27	Aqiqah	আকিকা দেওয়ার নিয়ম	Trends	0.076x
28	Fasting rules and niyat	রোজার নিয়ত; রোজা ভঙ্গের কারণ	Trends	0.071x; 0.015x
29	Salah tasbih and Salatut Tasbih	রুকুর তাসবিহ; সালাতুল তাসবিহ নামাজের নিয়ম	Ahrefs + Trends	>1,000; 0.06x
30	Kalima	কালেমা	Trends	0.059x
31	Durood	দরুদ শরীফ	Trends	0.045x
32	Qaza (missed) prayers	কাজা নামাজের নিয়ম; উমরি কাজা	Trends	0.044x
33	Qurbani and Eid-ul-Adha	কোরবানির ঈদ ২০২৭; কোরবানির গরুর বয়স (minimum cattle age)	Trends	0.043x
34	Ramadan calendar	রমজানের ক্যালেন্ডার ২০২৭; ramadan calendar 2027 bangladesh	Trends + observed	0.042x
35	Laylatul Qadr	শবে কদর; শবে কদরের নামাজ কত রাকাত	Trends	0.040x
36	Jumu'ah (salah, khutbah, greetings)	জুমার নামাজ কত রাকাত; জুম্মা মোবারক ক্যাপশন	Trends	0.034x / 0.036x; Friday 40–60x
37	Names of Allah	আল্লাহর ৯৯ নাম বাংলা অর্থ সহ	Trends	0.030x
38	Sleep and waking duas	ঘুমানোর দোয়া; ঘুম থেকে উঠার দোয়া	Ahrefs + Trends	>1,000; 0.03x
39	Morning and evening adhkar	সকাল সন্ধ্যার দোয়া ও জিকির	Ahrefs	>1,000
40	Death rites and janaza	জানাজার নামাজের দোয়া; মৃত ব্যক্তির জন্য দোয়া	Ahrefs + Trends	>1,000; 0.019x, +130%
41	Dua for parents	রাব্বির হামহুমা কামা রাব্বায়ানি সাগিরা	Ahrefs + Trends	>1,000; 0.013x
42	Rizq and debt duas	রিজিক বৃদ্ধির দোয়া; ঋণ মুক্তির দোয়া	Ahrefs	>1,000
43	Protection, evil eye, ruqyah	বদ নজরের দোয়া; রুকইয়াহ	Ahrefs + Trends	>1,000; ruqyah 0.005x
44	Women's fiqh (hayez, ghusl)	হায়েজ অবস্থায় কুরআন পড়ার বিধান	Trends	0.016x
45	Short surahs and bundles	তিন কুল; চার কুল; ছোট সূরা	Trends rising + observed	তিন কুল সূরা +100%
46	Hadith collections (Bukhari, Muslim)	বুখারী শরীফ; সহিহ মুসলিম ১১৬২	Ahrefs + Trends	>100; 0.03x / 0.005x
47	Hajj and Umrah (packages, registration)	হজ প্যাকেজ 2027 বাংলাদেশ মূল্য	Trends (Latin hajj) + observed	hajj 0.25x anchor-median mean; package terms ≈ 0
48	Islamic finance rulings	ব্যাংকে চাকরি হালাল না হারাম; crypto হালাল নাকি হারাম	Observed + SERP	No Trends value
49	Inheritance (faraid)	ফারায়েজ ক্যালকুলেটর; faraiz calculator	Trends + observed	0.004x
50	Hifz and Quran learning	কুরআন হিফজ করার সহজ উপায়; নূরানী কায়দা pdf	Observed + SERP	No Trends or Ahrefs value

Topics 45–50 are ranked low because their measured signal is small or missing. That is not the same as unimportant. Several of them (finance, faraid, hifz) reappear near the top of the opportunity ranking in 07, because results pages serve them poorly.

Top 100 actual Bangla, English and Banglish queries

How these 100 were chosen and ordered. All 100 are real rows in data/keyword-database.csv, as typed. Positions 1–40 have a Trends ratio of at least 0.10x the anchor or an Ahrefs bucket above 10,000. Positions 41–89 have 0.03–0.10x or more than 1,000. Positions 90–92 have 0.01–0.03x. Within each band, rows with a Trends ratio come first, in descending order, followed by Ahrefs-only rows. Positions 93–100 are the strongest **observed-only** suggestions. They were added deliberately to represent Banglish and English utility queries (district times, Ramadan calendar, Hajj registration, calculators), which the measured sources cover poorly. Where a row's CSV label is `serp_observation` but it also carries a Trends ratio, the ratio was used to place it. **The ranking mixes evidence types and is not a volume ranking.** The final list has 74 Bangla-script, 16 English and 10 Banglish queries. By evidence type it has 48 Trends rows, 41 Ahrefs rows, 8 observed suggestions and 3 SERP rows.

#	Query	Gloss	Language	Category	Evidence type	Demand signal
1	দোয়া	dua	Bangla	C. Dua & Zikir	trends_relative	Trends 5-yr mean 2.50x anchor-median (largest year-round term); 52-wk about 2.4x anchor (earlier research, Nov 4 2026); 24x the spelling দুয়া
2	স্বপ্নে	"in a dream..." (what it means)	Bangla	X. New topics	trends_relative	Trends 1.32x anchor; peak week Sep 27-Oct 3 2026; rising
3	হাদিস	hadith	Bangla	B. Hadith	measured_volume	Trends 1.13x anchor; Ahrefs >1,000 (KD Medium); top related query is হাদিস কি (homework)
4	namaz time	(as typed)	Banglish	D. Namaz	trends_relative	Trends 1.06x anchor
5	নামাজের সময়	prayer time	Bangla	D. Namaz	trends_relative	Trends 1.00x (the anchor); never zero
6	কুরআন	Quran	Bangla	A. Quran	measured_volume	Ahrefs >1,000 (KD Medium); Trends 5-yr mean 0.62x anchor-median
7	quran	(as typed)	English	A. Quran	trends_relative	Trends about 1.9x কুরআন in the same set (23.85 vs 12.77); 34.8 (2022) to 23.6 (2026)
8	dua	(as typed)	English	C. Dua & Zikir	trends_relative	Trends about 0.51x দোয়া in the same set; 1.2x anchor in earlier research (Nov 4 2026)

Confidence and limitations

Confidence is **high** for the existence and shape of the queries, the spelling ratios (each measured within a single Trends set), the dominance of Bangla script for dua, and the 2023–2026 decline. The decline appears consistently across more than ten terms and on two independent pulls. Confidence is **medium** for the head-term rankings. Trends ratios are exact-phrase only, so they undercount terms with many spellings and word orders (ইয়াসিন সূরা vs সূরা ইয়াসিন). Generic words such as হারাম and জায়েজ include non-religious use. Confidence is **low** for any absolute size. There are no Google Keyword Planner, Semrush or exact Ahrefs volumes. Ahrefs' free buckets cover only Quran, hadith and dua, and its KD values cover only about ten rows per seed. Any monthly number other than an Ahrefs bucket would be fabricated.

The two kinds of measurement agree only loosely (17 of 25 overlapping terms land in the same class), so the cross-category ranking is an ordinal judgement. Autocomplete was captured on one day, 5 Nov 2026, from one BD IP. That is the off-season, so event-week phrasing ("আজকের", today's) is under-represented. The Google SERP samples are small and were partly personalised: 6 Quran SERPs before a CAPTCHA, and 34 Q&A SERPs from a signed-in browser. Bing served as the proxy for hadith and dua. No People-Also-Ask data was captured for Quran, hadith or dua. Trends sets for Hajj/Umrah packages and gendered name terms failed with HTTP 429. Facebook, YouTube and TikTok search, where captions, waz, gojol and ruqyah demand probably concentrate, were not measured. The merged CSV contains 14 near-duplicate keywords from the two collection streams; দোয়া, for example, appears once as a Trends row and once as a suggestion. One conflict is unresolved. Earlier research (Nov 4 2026) cited an Ittefaq summary of a Google Year in Search 2025 list for Bangladesh with no Islamic item (Ittefaq). The 5 Nov search found no Bangladesh edition at all (Geo TV, Pakistan 2025). Neither finding changes the rankings above. Methods are detailed in 10-research-methodology-and-sources.md.

CHAPTER 4

Users search to act, then verify

ABOUT THIS CHAPTER

In plain words. Keywords show what people type; this chapter explains **why** they type it. For each topic area it answers seven questions: what problem brings the user, what they look for, what format they prefer, what makes them trust a site, what makes them leave, what brings them back, and what would help them more.

Key takeaway. Users search to **do** something (recite a surah, pray at the right minute, answer a private doubt, name a child) and then **verify** it. They want Arabic, Bangla pronunciation, meaning and audio together on one page. They trust named scholars, references and hadith grades, and they leave over ads, paywalls, wrong times and text errors.

Why it matters for the product. It turns the keyword list into user needs that designers and editors can act on. The worked example of "সূরা ইয়াসিন বাংলা উচ্চারণ" (Surah Yasin Bangla pronunciation) shows a complete user journey from search to frustration to what would have helped.

How to read the tags. Every statement is tagged **[Measured]**, **[Observed user feedback]** or **[Inferred]**. In this chapter, "Observed user feedback" also includes queries people actually typed (autocomplete and results pages), not only reviews.

Research date: 5 November 2026. This report explains why Bangladeshi Muslims search for each major Islamic topic: the problem behind the search, what they want, how they want it, what makes them trust or leave a source, and what brings them back. It builds on the query data in 03-bangladesh-keyword-research.md and the user-voice corpus summarised in 06-bangladesh-specific-user-needs.md. Gaps and opportunities are scored in 07-content-and-feature-gaps.md, and timing is covered in 08-seasonal-search-trends.md. Row-level data: data/keyword-database.csv.

Key findings

- **Most searches start from a practical need, not curiosity.** The commonest triggers are reciting a specific surah, saying the right dua for a situation, praying correctly at the right local time, checking whether something is allowed, or posting something on Facebook. The query names the object and the format it is wanted in ("সূরা ইয়াসিন বাংলা উচ্চারণ", Surah Yasin in Bangla pronunciation).
- **The core content format is Arabic, Bangla pronunciation (উচ্চারণ) and Bangla meaning side by side, with audio to check pronunciation by ear.** Users who cannot read Arabic say so directly in reviews. They ask for উচ্চারণ for duas as well as surahs, and they want audio.
- **Trust comes from four things:** a named source (Islamic Foundation, Al-Kawsar, Shaykh Ahmadullah), a named grading and reference, text with no errors, and an answer that matches the user's own madhhab expectations. Users type trusted names into their queries and report text errors verse by verse.
- **The top reasons users leave are ads around sacred text, paywalls on religious content, wrong prayer times and alarms that fail, and errors in Quran or hadith text.** Ads are the largest complaint theme in 11,671 Play reviews: 551 matches, 349 of them rated 3★ or lower. Users frame indecent ads as a religious objection ("নাজায়েজ", impermissible), not just bad UX.
- **Users come back for daily prayer times, a small daily Quran or dua portion that builds into a khatam, Friday-specific content, and Ramadan, which is when many first adopt an app.** Notifications cut both ways: users ask for reminders and complain about nagging in roughly equal measure.
- **Verification is a quiet need across every category.** Examples are "সঠিক উচ্চারণ" (correct pronunciation), "কোন সূরার আয়াত" (which surah is this ayah from), look-ups of hadith numbers, and "দলিলসহ" (with evidence). Users rarely search for authenticity as a topic. They want it built into the answer.

How to read the tags

Every claim in the category tables carries one tag. **[Measured]** means a number: an Ahrefs volume bucket, a Google Trends ratio against the prayer-time anchor, or our own keyword-match count over the review corpus. **[Observed user feedback]** means users' own words. These are verbatim Google Play reviews (11,671 reviews of 22 Islamic apps on the BD storefront, scraped 5 Nov 2026) or the queries

users type, as captured in autocomplete and results-page snapshots. Both show what users actually say or do, but neither has volume. **[Inferred]** means the analyst's interpretation. Play reviews cannot verify a reviewer's country, so this report leans on Bangla-script reviews and flags English reviews of global apps as "location unknown" (Play: Muslim Bangla).

Quran: reading a specific surah without reading Arabic

A large share of Quran searches comes from people who want to **recite a particular surah for a particular reason**, but cannot read Arabic script fluently. The surahs with the highest measured demand (Mulk, Kahf, Yasin, Rahman, Ayatul Kursi) are the ones tied to routines: Mulk at night, Kahf on Friday, Yasin for the dying and on special nights.

Dimension	Finding	Tag and source
1. Problem	Wants to recite a specific surah or ayah for a routine or occasion; many cannot read Arabic. "আমি বাংলা পারি, আরবি পারিনা! এজন্য আমি বাংলাতেই পড়ি" (I can read Bangla, not Arabic, so I read in Bangla)	[Observed user feedback] (Play: kutblog); [Measured] Ayatul Kursi, Mulk, Rahman, Kahf >10,000/month in Ahrefs BD (Ahrefs ayatul kursi)
2. Information sought	Arabic + Bangla উচ্চারণ + meaning; ayah ranges (first 10 of Kahf, last 3 of Hashr); "কত পারায়" (which para); ফজিলত (virtue); শানে নুযুল (reason of revelation)	[Observed user feedback] (Autocomplete সূরা ইয়াসিন)
3. Preferred format	Written text ("লিখিত"), printable PDF (surah yasin pdf >1,000, KD Hard), audio and video (a YouTube block on 5 of 6 Google SERPs; "তেলাওয়াত মধুর কন্ঠে", recitation in a sweet voice), image cards ("ayatul kursi bangla pic")	[Measured] (Ahrefs সূরা ইয়াসিন); [Observed user feedback] (YouTube autocomplete)
4. Trust drivers	Error-free text, checked verse by verse; a named translation ("ইসলামিক ফাউন্ডেশন এর অনুবাদ দিলে আরো ভালো হতো", it would be better with the Islamic Foundation translation); colloquial rather than archaic sadhu Bangla; audio to confirm pronunciation	[Observed user feedback] (Play: kutblog; Play: Greentech Al Quran)
5. Leave reasons	Ads mid-surah ("you're reading a surah and all of a sudden advertisement related to job or fridge... pops up", 63 helpful votes); text errors ("সুরা মুলক ১৭ নং আয়াতে ভুল আছে এরকম এপস থেকে সতর্ক থাকবেন", a mistake in Mulk 17, beware of such apps); paywalls ("ধর্ম বিক্রি করে খাওয়া বন্ধ করুন", stop making a living by selling religion)	[Observed user feedback] (Play: kutblog; Play: E-book Library; Play: Tafhimul Quran)
6. Return reasons	A daily reading habit building to a khatam ("প্রতিদিন সকালে আমি কুরআন পড়ে... জীবনের প্রথম খতম", reading every morning, my first khatam ever); reading after Fajr; Surah Kahf every Friday (Friday searches 25–45x other weekdays)	[Observed user feedback] (Play: Greentech Al Quran); [Measured] (Trends daily, 90 days)
7. Features that would help	One canonical page per surah and ayah range, with Arabic, উচ্চারণ, meaning, synced audio, virtue (with grading), a share card and a print view; a large default font with a visible size control; a public report-an-error flow and corrections log; Latin-script aliases (surah mulk is about 7x সূরা মুলক)	[Inferred]; font requests [Observed user feedback] (Play: Muslims Day)

The head term "কুরআন" brings a different crowd: students and madrasa families looking up Quran-board results and definitions (Trends কুরআন related). [Inferred] They are a real but separate audience, and they should not shape the reading experience.

Hadith: something to share, or a citation to check

Hadith searches split three ways. The biggest group, by measured volume, wants **a short hadith on a topic** to post, quote or use in school. Ahrefs puts several short-hadith list queries above 1,000 a month. A second group **checks a numbered citation** they saw elsewhere. A third arrives seasonally, for example looking for the virtue of Shab-e-Barat. Browsing whole collections is a small activity on Google.

Dimension	Finding	Tag and source
1. Problem	Needs a hadith about a topic (mothers, rizq, patience, marriage) to post, quote or study; or wants to verify "Bukhari number X"	[Measured] ছোট হাদিস, হাদিসের বাণী, ১০০ টি ছোট হাদিস >1,000 (Ahrefs হাদিস); [Observed user feedback] "সহিহ বুখারী" completes to hadith numbers (Autocomplete)
2. Information sought	The hadith text in Bangla, ideally with Arabic, grading, book and number; topic lists; seasonal virtue hadith (শবে বরাতের ফজিলত সম্পর্কে হাদিস >1,000)	[Measured]; [Observed user feedback] (Autocomplete মা নিয়ে হাদিস)
3. Preferred format	Short, shareable text; image ("হাদিসের বাণী ছবি সহ", >100); caption variants; collection PDFs by named edition ("মুসলিম শরীফ ১ম খন্ড pdf ইসলামিক ফাউন্ডেশন")	[Measured]; [Observed user feedback]

Dimension	Finding	Tag and source
4. Trust drivers	Named grading and detailed references: "ডিজাইন যেমন চমৎকার, সনদ তেমনই সহীহ" (the design is as excellent as the chains are sahih); "references should be more detailed"; "Provide link to original pdf books... for authentic verification"	[Observed user feedback] (Play: IRD Dua; Play: Bangla Hadith; Play: IRD Al Hadith)
5. Leave reasons	Mismatched text and translation, numbering gaps and no response: "একহাদীসের টেক্সটের অধীনে অন্য হাদিসের তরজমা... ৬৮ নং হাদিসের পর ১০০ নং... রিপোর্ট করেছি- কিন্তু কোন রেসপন্স নেই" (another hadith's translation under one hadith's text; after 68 it jumps to 100; I reported it but got no response); grading conflicts between graders (Darussalam vs Albani, location unknown)	[Observed user feedback] (Play: IRD Al Hadith; Play: Greentech Hadith)
6. Return reasons	Offline reading ("Offline reading is a big plus"); "আজকের হাদিস" (today's hadith) exists as a query. There is **no direct BD Bangla review evidence** that a daily-hadith push drives return	[Observed user feedback] (Play: Bangla Hadith; Autocomplete আজকের হাদিস)
7. Features that would help	Topic hubs (" নিয়ে হাদিস") with Arabic, Bangla, grade and named grader, and a share card that carries the reference; look-up by book and number; a visible report-error flow with replies	[Inferred]

The topic-hadith pages that rank today are caption sites with no Arabic and no grading (Bing মা নিয়ে হাদিস). [Inferred] The user's job (find something postable) is being met, but the trust need is not. That is why this cluster scores high in 07.

Dua and zikir: a life situation, often on someone else's behalf

Dua is the largest year-round Islamic search family. Its averages run about 2.5x the prayer-time anchor (Trends T9). The long tail is organised by **problem**: sleep, illness, debt, anxiety, exams, a parent who has died. It is often typed for someone else.

Dimension	Finding	Tag and source
1. Problem	A situation: sleeping and waking, illness, danger, debt, anxiety, a deceased relative, exams, the evil eye. Searches are often for a husband or child ("স্বামীর রিজিক বৃদ্ধির দোয়া", dua for my husband's rizq)	[Measured] sleep, waking, janaza, danger, istikhara, evil-eye and rizq duas each >1,000 (Ahrefs দোয়া); [Observed user feedback] (Autocomplete রিজিক বৃদ্ধির দোয়া)
2. Information sought	Arabic, উচ্চারণ, meaning; how many times ("কতবার পড়তে হয়"); when ("কখন পড়তে হয়"); the source ("কোন সুরার আয়াত"); bundles (morning and evening; before sleep; after salah)	[Observed user feedback] (Autocomplete সকাল সন্ধ্যার দোয়া)
3. Preferred format	Text with Bangla pronunciation and audio ("sokaler dua sunte chai", I want to hear the morning dua); HD image; PDF of masnoon duas; status text for asking prayers for someone ("দোয়া চেয়ে স্ট্যাটাস")	[Observed user feedback] (Autocomplete পরীক্ষার দোয়া)
4. Trust drivers	Named scholars and institutions typed into the query (শায়খ আহমাদুল্লাহ, আস সুন্নাহ ফাউন্ডেশন, মিজানুর রহমান আজহারী); authentic references ("The best thing is all of them have authentic references", 32 helpful votes)	[Observed user feedback] (Play: Hisnul Muslim BN)
5. Leave reasons	Missing Bangla pronunciation: "দোয়া গুলোর উচ্চারণ এবং অর্থ বাংলা দিলে আরো অনেক বেশি ভালো হতো" (it would be much better with Bangla pronunciation and meaning) and "দুয়া ও জিকিরের আরবি উচ্চারন টা বাংলায় দেন" (give the dua and zikir pronunciation in Bangla; 231 helpful votes); no audio ("প্রতিটা দোয়ার অডিও দেওয়া তাহলে উচ্চারণ সহি পড়তে অনেক সুবিধা হয়", audio for each dua would help correct pronunciation)	[Observed user feedback] (Play: Muslim Pro; Play: Ibadah; Play: Deen)
6. Return reasons	Learning one dua at a time ("after every Fard Salah I try to learn one dua"); daily routines; dua searches peak at 05:00–06:00 BD time (earlier research, Nov 4 2026)	[Observed user feedback] (Play: Hisnul Muslim BN); [Measured] (Trends hourly)
7. Features that would help	Need-based entry points ("I am in debt", "I can't sleep") mapped to graded masnoon duas; morning, evening, after-salah and bedtime bundles; per-dua audio; a simple Bangla zikir counter; a share card that keeps the source	[Inferred]

Zikir has a Bangladesh-specific Sufi layer (Atroshi, Charmonai and Taheri zikir all appear among related queries), and some users object to Sufi content (Trends জিকির related; Play: Islami Jindegi). [Inferred] Whether to include that layer is an editorial decision with sectarian consequences. It is not a keyword decision.

Namaz and prayer times: the right minute, for my district, my madhhab

Prayer times are the most habitual search. The term never drops to zero in any week, and in earlier research it peaked at 04:00–06:00, before and at Fajr (Trends hourly). Accuracy is judged to the minute, against the Islamic Foundation and against Hanafi practice.

Dimension	Finding	Tag and source
1. Problem	What time is Fajr/Asr/Isha today where I am; when does the waqt end; is now a forbidden time; how do I pray this prayer; I made a mistake in salah, what now	[Measured] নামাজের সময় 1.00x, namaz time 1.06x, নামাজের নিয়ম 0.26x (Trends 12-m); [Observed user feedback] "নামাজের মধ্যে ভুল হলে কি করনীয়" (Autocomplete নামাজের ভুল)
2. Information sought	Start **and** end times by district, upazila and neighbourhood; forbidden times; madhhab-specific Asr ("hanafi", "salafi", "আহলে হাদিস"); rakat counts; niyat; women's posture "দলিলসহ" (with evidence)	[Observed user feedback] (Autocomplete prayer time dhaka; Autocomplete মহিলাদের নামাজের নিয়ম)
3. Preferred format	A "today" view; a year table or PDF ("১২ মাসের নামাজের সময়সূচি বরিশাল"); step-by-step guides with pictures ("ছবি সহ pdf"); video (16 YouTube links on the "namaz er niyom" SERP)	[Observed user feedback] (Autocomplete নামাজের নিয়ম; Google namaz er niyom)
4. Trust drivers	Matching the Islamic Foundation ("দয়া করে নামাযের সময় টা ইসলামিক ফাউন্ডেশন এর সময়,অনুযায়ী করে দিন", please follow Islamic Foundation times); district-specific schedules (188 and 196 helpful votes on two Ibadah reviews); Hanafi expectation ("আমাদের হানাফি মাযহাবের সময়ের সাথে এই সময়সূচী মিলেনা কেনো", why doesn't this match our Hanafi times?)	[Observed user feedback] (Play: Ibadah)
5. Leave reasons	Wrong times ("I missed my suhoor only because I followed the time on the app"); alarms failing ("আমার ফযর এর নামাজ কাযা হয়ে গেলো,এটার দায় কি নিবে??", my Fajr became qaza; who takes responsibility?); being made to pick a madhhab ("আমরা সবাই মুসলিম", we are all Muslims); forced permissions	[Observed user feedback] (Play: Amader Lab; Play: Ibadah; Play: Muslim Bangla)
6. Return reasons	A daily need five times over; Friday lifts prayer-time searches 8–20%; a request for "time remaining" to the next prayer ("নামাজের রিমাইনিং টাইম আর কতক্ষণ আছে")	[Measured] (Trends daily); [Observed user feedback] (Play: Muslim Bangla)
7. Features that would help	An IF-matched district timetable as the default, with an optional upazila list and a manual location picker (no GPS required); both Asr times labelled by method rather than by sect; start, end and forbidden times; the source shown on the page; no alarm promises on the web	[Inferred]

Our review-corpus counts put this in proportion. "Wrong prayer time" appears in only 25 reviews, against 263 for notification or alarm issues (75 rated 3★ or lower) (Play: Muslim Bangla). [Measured] Accuracy complaints are rare, but they are intense, and they turn on minutes. [Inferred] A website avoids the alarm problem entirely, but it should then not promise an azan it cannot reliably ring.

Q&A and masala: a private doubt, answered by a named authority

Q&A searches are **specific doubts** about whether something is allowed, whether it is a sin, or whether a prayer or a divorce is valid. Many are private or embarrassing, and users want a ruling from someone they recognise.

Dimension	Finding	Tag and source
1. Problem	A doubt about permissibility, sin or validity: food, finance, birthdays, music, divorce in anger, menstruation and intimacy	[Measured] জায়েজ 0.30x, হারাম 0.31x, তালাক 0.23x (generic) (Trends জায়েজ related); [Observed user feedback] (Autocomplete কি জায়েজ)
2. Information sought	A short ruling, the evidence ("দলিলসহ", "সহীহ হাদিস"), differences between schools; for money questions, the BD amount for this year ("কত টাকা ২০২৬")	[Observed user feedback] (Autocomplete করলে কি গুনাহ হবে)
3. Preferred format	Text Q&A pages; scholar video (music ruling SERP 29 YouTube links; trading 15); Facebook posts by named muftis	[Observed user feedback] (Google গান শোনা কি হারাম)
4. Trust drivers	A named person or publication typed into the query (আল কাউসার, শায়খ আহমাদুল্লাহ, মিজানুর রহমান আজহারী, আহলে হক মিডিয়া); fast human answers ("ইসলামী প্রশ্নঃ করেছি এবং ২ দিনের ভিতর সঠিক সমাধান পেয়েছি", I asked and got a correct answer within 2 days)	[Observed user feedback] (Autocomplete মহিলাদের নামাজের নিয়ম; Play: Muslim Bangla)
5. Leave reasons	Results pages show conflicting answers from Ahl-e-Hadith monthlies and Hanafi sources with no labels; women's method described ambiguously ("মহিলাদের সিজদার ব্যাপারটা পরিষ্কার করা হয়নি", the women's sajdah is not made clear); content from a group the user rejects	[Observed user feedback] (Google রাগের মাথায় তালাক; Play: Deen); [Inferred] that unlabelled conflict drives users to keep searching
6. Return reasons	The ability to ask ("মুসলিম বাংলার মতো প্রশ্ন করার অপশন যোগ করুন", add a question option like Muslim Bangla's); named scholars' books ("মুফতি দেলওয়ার হোসাইন সাহেবের বই গুলো যদি যোগ করতেন")	[Observed user feedback] (Play: Islami Jindegi)

Dimension	Finding	Tag and source
7. Features that would help	Answer pages built on the seven templates in 03 (ruling, evidence, madhhab differences, named reviewer, date); anonymous asking; finance and family answers that state the BD context	[Inferred]

Google underrepresents the most private questions. The autocomplete seed for masturbation returned nothing. Earlier research (Nov 4 2026) found that IslamQA Bangla's two most-read answers, about 223,600 and 222,700 reads, concern sexual purity and masturbation (IslamQA Bangla). [Inferred] Anonymous, private asking is a requirement, not an option.

Ramadan and Hajj: dates for Bangladesh, minutes for my district

Ramadan searches are utility searches with a deadline: today's sehri end and iftar time for my district, the date of the first fast and of Eid **in Bangladesh**, the fitra amount set by the Islamic Foundation. Hajj searches in November are about **registration and cost**, not ritual.

Dimension	Finding	Tag and source
1. Problem	When does Ramadan, Shab-e-Barat or Eid fall in BD; what time is sehri or iftar here today; how much fitra or zakat do I owe; when does Hajj registration close and what does it cost	[Measured] সেহরির শেষ সময় 0.34x, ইফতারের সময় 0.33x (Trends 12-m); [Observed user feedback] (Autocomplete রমজানের ক্যালেন্ডার; Autocomplete হজ নিবন্ধন)
2. Information sought	Dates with "বাংলাদেশ" appended; countdowns ("আর কতদিন বাকি", how many days left); district calendars; niyat and dua; IF fitra amount; packages and visa fees	[Observed user feedback] (Autocomplete শবে বরাত)
3. Preferred format	A printable district calendar ("রমজানের ক্যালেন্ডার ডিজাইন"), a live countdown ("iftar time dhaka countdown"), Latin-script times queries	[Observed user feedback] (Autocomplete iftar time dhaka)
4. Trust drivers	The Islamic Foundation named in the query ("sehri time dhaka today islamic foundation", "ফিতরা কত টাকা ২০২৬ ইসলামিক ফাউন্ডেশন"); minute accuracy ("প্রাই অ্যাপে ৩/৫ মিনিট কম বেশি দেওয়া হয়... ইফতারের জন্য তত সঠিক টাইম খুব জরুরী", most apps are 3–5 minutes off; accurate iftar time is essential)	[Observed user feedback] (Play: Ibadah)
5. Leave reasons	A missed suhoor because of a wrong time; losing a favoured feature ("যদি আগের মতো ইফতার সেহরির সময় সাইরেন থাকতো ভালো হত", it would be good to have the sehri/iftar siren back)	[Observed user feedback] (Play: Amader Lab; Play: Muslims Day)
6. Return reasons	Ramadan as the adoption moment ("রমজান মাসের ওসিলায় কোরআন এর অ্যাপস ডাউনলোড করার পর প্রতিদিন ফজর নামাজ পড়ে...", after downloading a Quran app because of Ramadan, every day after Fajr...); "রমজান মাসের জন্য খুবই উপকারী" (very useful for Ramadan)	[Observed user feedback] (Play: Quran Majeed; Play: Ibadah)
7. Features that would help	One page per occasion that shifts from countdown to how-to to next year's date; district Ramadan calendars that load instantly; fitra and zakat figures updated when the IF announces them; Hajj deadline tracking	[Inferred]

Learning: homework, Quran literacy and books

"Islamic learning" queries are largely **school and madrasa work** ("শিরক কাকে বলে কত প্রকার ও কি কি", what is shirk, how many kinds), **Quran literacy** (Noorani qaida, makhraj, hifz) and **free book PDFs**. Children's Islamic learning barely appears on Google as a phrase.

Dimension	Finding	Tag and source
1. Problem	Homework and exams; learning to read the Quran or memorise it ("কুরআন হিফজ করে ভুলে যাওয়া", forgetting after memorising); getting a book; teaching children	[Observed user feedback] (Autocomplete ইসলাম শিক্ষা বই; Autocomplete কুরআন হিফজ)
2. Information sought	Definitions and lists; named-author books (Asadullah Al-Galib); tafsir by edition ("তাফসীরে ইবনে কাসীর... কোন প্রকাশনী ভালো", which publisher is better)	[Observed user feedback] (Autocomplete তাফসীর)
3. Preferred format	PDF, often pirated ("ইসলামিক বই pdf telegram"); video (19 YouTube links each on the Arabic-learning and prophets' stories SERPs)	[Observed user feedback] (Google আরবি শিক্ষা)
4. Trust drivers	Named publisher and translator; more Bangla tafsirs requested by name ("তাফসীরে বায়যাবী, মারেফুল কোরআন"; "তাফসিরে জালালাইন বাংলা থাকলে আরো ভালো হতো")	[Observed user feedback] (Play: Greentech Al Quran)

Dimension	Finding	Tag and source
5. Leave reasons	Errors in learning material ("মুক্তবর্ণ পরিচয় পর্ব ১ প্রথম পেজে ভুল আছে... না জানি ভিতরে আরো কত ভুল আছে", the first page of the alphabet lesson has a mistake; who knows how many more inside; 49 helpful votes)	[Observed user feedback] (Play: E-book Library)
6. Return reasons	Progress: memorisation tracking and daily goals exist only on hadithbd among sites audited; correcting one's own pronunciation by listening ("অডিও উচ্চারণ শুনে শুনে ভুল গুলো ঠিক করি")	[Observed user feedback] (Play: Greentech Al Quran); hadithbd feature from 05
7. Features that would help	Exam-shaped explainers kept separate from practice content; licensed books instead of pirated PDFs; a hifz revision tool; Bangla children's content (stories, duas for kids)	[Inferred]

Lifestyle: naming a child, posting on Friday, making sense of a dream

Lifestyle searches are tied to **life events and social posting**: a birth (names, then aqiqah), Friday or Ramadan greetings for Facebook, condolence posts, and the anxious morning-after search about a dream. Dream interpretation (স্বপ্নে) is larger than prayer times on Google, at 1.32x (Trends স্বপ্নে related).

Dimension	Finding	Tag and source
1. Problem	Naming a newborn; finding something to post (Friday, Ramadan, a death, a birthday); waking from a dream and wanting to know whether it means good or bad	[Measured] ইসলামিক নাম 0.52x, স্বপ্নে 1.32x, ইসলামিক ক্যাপশন 0.13x (Trends ইসলামিক নাম related)
2. Information sought	Name meaning, gender, first letter, Quranic origin, "uncommon" names; caption text in Bangla, Arabic or English; dream meaning by object (fish, snake, marriage, a baby, money, a dead person)	[Observed user feedback] (Autocomplete নামের ইসলামিক অর্থ)
3. Preferred format	Lists filtered by letter and gender; copyable text and image cards (DP, Jumma Mubarak status); a quick, direct answer for dreams	[Observed user feedback] (Autocomplete কষ্টের ইসলামিক)
4. Trust drivers	Users show little explicit trust demand here, which is itself the risk: caption sites cite no sources for quoted hadith or ayat, and a Kolkata newspaper and Quora rank for dream meanings	[Observed user feedback] (Google islamic caption bangla; Google স্বপ্নে সাপ দেখলে কি হয়); [Inferred] that unsourced quotes spread misattributed hadith
5. Leave reasons	Not directly evidenced in reviews. Probably thin lists, ads and repeated content	[Inferred]
6. Return reasons	Births and the family-event funnel (aqiqah peaks just before Eid-ul-Adha at 0.076x); weekly Friday posting; the morning dream search (05:00–08:00 peak in earlier research, Nov 4 2026)	[Measured] (Trends BD 12-m; Trends hourly)
7. Features that would help	Name pages with meaning, origin and how the meaning was verified; a caption library whose every quote carries its reference; dream content framed cautiously, with sources and a clear note on the limits of interpretation; a birth-to-aqiqah path	[Inferred]

Worked example: the journey behind "সূরা ইয়াসিন বাংলা উচ্চারণ"

Take one high-demand query and follow it end to end. "সূরা ইয়াসিন বাংলা উচ্চারণ" (Surah Yasin, Bangla pronunciation) sits in Ahrefs' **>1,000 a month bucket with KD Easy**. So do its siblings: "সূরা ইয়াসিন বাংলা উচ্চারণ সহ অনুবাদ" (with translation), "সূরা ইয়াসিন লিখিত" (written), "সূরা ইয়াসিন সম্পূর্ণ" (complete) and "সূরা ইয়াসিন আরবি pdf" (Ahrefs সূরা ইয়াসিন). [Measured]

The trigger. The reversed-order term "ইয়াসিন সূরা" reached its five-year peak in **Shab-e-Barat week 2023** (5–11 Mar), not in Ramadan (Trends quran set A). [Measured] That fits the Bangladeshi practice of reciting Yasin on special nights and for the dying and the deceased. [Inferred] The person searching is often doing so for an occasion or a family moment, and many cannot read the Arabic. A kutblog reviewer puts it plainly: "যারা আরবি জানে না বা বৃদ্ধ,বয়স হয়ে গেছে আরবি শিখা তো সম্ভব না... এই বাংলাতে যেন অর্থসহ পড়ে" (those who don't know Arabic, or are old, can't learn it... let them read it in Bangla with meaning) (Play: kutblog). [Observed user feedback]

The query and its modifiers. Autocomplete shows users narrowing by format: লিখিত (written, as opposed to video), আরবি pdf, বাংলা উচ্চারণ সহ pdf, ফজিলত (virtue), and "ইয়াসিন সূরা কত পারায়" (which para is Yasin in). On YouTube they look for "সূরা ইয়াসিন তেলাওয়াত মধুর কণ্ঠে" (recited in a sweet voice) (Autocomplete সূরা ইয়াসিন; YouTube autocomplete). [Observed user feedback]

What the results page offers. On Google (gl=bd), the page opens with **an AI-generated answer**, then a **video carousel**, then muslimbangla.com and channel7tvbd.com, a TV channel's site. DuckDuckGo-BD shows alqurans.com, two informationbangla.com pages, and news portals (dhakapost, kalbela) (Google SERP). [Observed user feedback] Bangla-script pronunciation is rare among the dedicated

sites audited. Of those, only muslimbangla shows it per verse, and quran.com offers Latin transliteration only (05). The user lands either on an AI summary of uncertain accuracy, a video, or an ad-funded news or blog page.

Where the journey breaks. Three failure modes recur in reviews. The first is **errors in the very surah being read**. A PG Apps BD reviewer gave 1★ because the last ayah of Yasin read "কুল্লা" where it should be "কুল্লি": "এই এপবা কোরআন কেউ ডাউনলোড করবেননা এড আসে খুব আবার ভুলো দেওয়া আচে" (nobody download this Quran app: lots of ads, and there are mistakes too) (Play: PG Apps BD). The second is **ads breaking concentration mid-surah** (Play: kutblog). The third is **font too small for older readers**: "বাংলা অনুবাদে ব্যবহৃত বর্নের ফন্ট এক ধাপ বড় হলে বয়স্ক পাঠকের জন্য অধিকতর সুবিধা হত" (a one-step-larger Bangla font would help elderly readers) (Play: PG Apps BD). A further subtle failure is transliteration that does not match the translation, or that renders sounds wrongly. One reviewer with 161 helpful votes asked for colloquial rather than sadhu Bangla (Play: kutblog). [Observed user feedback]

What would make them stay and return. [Inferred] A single Surah Yasin page should load fast and text-first on a budget Android phone. It would show Arabic, proofread Bangla উচ্চারণ and a named Bangla translation verse by verse. It would offer synced audio as a pronunciation check and a large font by default. It would include the virtue with its grading, a print/PDF view for the people asking for "লিখিত" and "pdf", "which para" answered on the page, and a visible "report an error" link with a public corrections log. The return path is the routine around the surah: the same page bookmarked for the next Shab-e-Barat, or a nudge toward the Thursday-night and Friday routines (Kahf), without nagging notifications. Reviews of Muslims Day, kutblog and Greentech complain explicitly about repeated notification prompts (Play: Muslims Day). [Observed user feedback]

What changes across categories, and what does not

Two patterns hold across every category. First, **format modifiers are content requirements.** উচ্চারণ, অর্থসহ, pdf, ছবি, অডিও and "কত টাকা ২০২৬" each map to something a page must contain. A page missing any of them sends the user back to search (03). Second, **trust is assessed at the level of the individual item**: a verse, a hadith number, a prayer minute, a mufti's name. Our review corpus shows that local Bangla-first apps get 1–2★ in only about 2–5% of reviews, against 41% for Wemu and 19% for Muslim Pro (Play: Wemu; Play: Muslim Pro). [Measured] Users reward accuracy and restraint more than breadth.

What changes is the **social direction** of the search. Quran, dua and namaz searches are for the searcher's own practice. Hadith, captions and status searches are for posting to others. Q&A and dream searches are private. [Inferred] Each needs a different default: practice pages need routines and progress, shareable pages need reference-carrying share cards, and private pages need anonymity and no social prompts.

Confidence and limitations

Confidence is **high** that the needs listed exist. Each one is backed by users' own words, either in queries or in reviews, often both. Confidence is **medium** on how large each need is relative to the others. The volumes come from Ahrefs buckets (Quran, hadith and dua only) and Trends ratios, which are relative and exact-phrase only (03). Confidence is **lower** on leave and return reasons for **websites**. The richest evidence is Google Play reviews of apps, and website visitors who never install an app are absent from the corpus. Review samples are the newest and "most relevant" reviews, not a random sample. Theme counts come from keyword matching and are indicative only. Reviewers' countries cannot be verified. Reddit, Facebook groups and YouTube comments could not be retrieved, so trust signals such as "রেফারেন্স দিন" (please give a reference) in comments are unmeasured. There is no retention, DAU or session data for any BD Islamic site or app. Statements about what brings users back rest on reviews and search timing, not on observed return visits. Hourly patterns (Fajr and dream peaks) come from earlier research (Nov 4 2026) and were not re-pulled. Lifestyle leave-reasons are inferred, with no direct user evidence. See 10-research-methodology-and-sources.md for methods.

CHAPTER 5

No Bangla site yet combines breadth and trust

ABOUT THIS CHAPTER

In plain words. The research team visited 16 Bangladesh-relevant Islamic websites and checked 33 features on each (Quran, translations, pronunciation, tafsir, audio, hadith grading, duas, prayer times, Qibla, calendar, zakat calculator, search, bookmarks, offline support and more). This chapter shows the result as a feature matrix.

Key takeaway. No Bangla site combines breadth and trust. muslimbangla.com covers the most topics but does not cite sources for its duas. hadithbd.com is the most complete sourced library but has no prayer times. quran.com has the deepest Bangla Quran but its search finds nothing for the everyday word নামাজ. Sites disagree on the Asr time (by about 47 minutes), on the Hijri date and on the Bangla calendar date on the same day, and none cites Bangladesh's Moon Sighting Committee.

Why it matters for the product. It separates **table stakes** (features every serious site already has, so a new site must have them too) from **differentiators** (rare features that could make a new site stand out).

How to read the matrix. A = Available, P = Partial, N = Not available (not found in the pages examined), ? = Unable to verify (for example behind a login).

Watch out for. Page-speed scores could not be collected because Google's PageSpeed service was rate-limited. Features behind logins were not tested.

Key findings

- **No single Bangla website does it all.** Only **muslimbangla.com** covers Quran, hadith, dua, prayer times and Q&A, but its duas cite **no sources** and its translators are unnamed. **hadithbd.com** is the most complete *sourced* library (33 books, 94,570 hadith, Hisnul Muslim, three named Bangla Quran translations), but it has **no prayer times**. **quran.com** has the deepest Bangla Quran (4 named translations, 4 named tafsirs), but **no Bangla-script pronunciation**.
- **Table stakes are now:** Arabic + Bangla translation, per-verse audio, a hadith grade label, a dua list, a mobile layout that does not overflow, and **no ads**. Every dedicated Islamic site we examined was ad-free, so "ad-free" only differentiates against newspapers and SEO blogs.
- **Bangla search is the biggest UX gap.**
- quran.com's API returns **286 results for সালাত (salat) but 0 for নামাজ (namaz)**, the everyday word.
- sunnah.com returns nothing for Bangla queries.
- Only **hadithbd** maps Banglish ("namaj" → নামায/নামাজ/সালাত).
- Only **islamqa** (via Google's search engine) corrected the misspelling "নামজ".
- **Prayer-time sites disagree on Asr by 47–48 minutes.** On 5 Nov 2026 ihadis showed **2:54 PM** (Shafi'i/standard); muslimbangla and salat.habibur showed **3:41–3:42 PM** (Hanafi). Only salat.habibur shows both.
- **Dates disagree too.** The Bangladesh-oriented sites showed **24 Jumada al-Awwal 1448**, while Saudi-run islamqa showed **the 25th**. **No site cited Bangladesh's National Moon Sighting Committee.** ihadis and muslimbangla also disagree on the Bangla calendar date (21 vs 20 Kartik).
- **Only quran.com and islamqa are real PWAs** (manifest + service worker). ihadis and muslimbangla ship manifests without working offline support, and the government Quran site still serves verse text as images.
- **The rarest, most defensible differentiators are trust and Bangla-aware search:** named translators, graders and sources; synonym, Banglish and typo tolerance; both Asr times with Qibla; BD-unit zakat; and progress tracking.

How the audit was run

On 2026-11-05 the research team visited 14 Islamic sites, three newspaper Islam sections and four defunct domains with three tools: curl (mobile user-agent), WebFetch, and a headless Chromium browser at a 390×844 viewport. **"Not available" means the feature was not found in the site navigation or on the pages examined. It does not prove the feature is absent everywhere on the site.** Logged-in

features were not exercised. The PageSpeed Insights API returned **HTTP 429 (quota exceeded)**, so there are no PSI scores (PSI API). The load-time figures below come from the headless browser's own measurement of LCP (Largest Contentful Paint), taken unthrottled from a non-Bangladesh network. They are a rough proxy, not PSI scores. Site selection, traffic and the full method are in report 02 and report 10.

Full feature matrix

Legend: A = Available (seen); **P** = Partial; **N** = Not available (not found on pages examined); **?** = Unable to verify; **—** = not applicable to the site type.

Table stakes versus rare differentiators

Universal or near-universal among the serious Quran and hadith sites:

- Arabic + Bangla translation and audio: QC, HBD, MB, QS and QGB all have both (QC; HBD; MB).
- A hadith grade label: "সহিহ (Sahih)" on HBD, "সহিহ হাদিস" on IH, and a Grade toggle on SN (HBD; IH; SN).
- A responsive layout.
- **No ads.** Ads appeared only on newspapers.

A new site that offers less than this will look broken next to the incumbents. A new site that offers exactly this will look like the incumbents.

Rare features found on only one or two sites are where the openings are:

Differentiator	Who has it	Evidence
Bangla-script উচ্চারণ (pronunciation) per verse	MB only (QC offers Latin transliteration)	MB; QC API
Multiple **named** Bangla tafsirs	QC only	QC API tafsirs
Banglish search	HBD only	HBD search namaj
Misspelling correction	IQA only (Google CSE)	IQA search
Qibla bearing; both Hanafi and Shafi'i Asr	SH only	SH
Zakat calculator with BAJUS prices and BD units	MB only	MB zakat
Hifz tracker and tilawat progress	HBD only	HBD
AI-generated Q&A with citations	HBD only (machine-generated, not scholar-reviewed)	HBD AI Q&A
Named-mufti Q&A at scale	MB (IDs above 170K), ALK	MB masails; ALK
Working PWA	QC, IQA	QC sw.js; IQA service worker
Sourced duas	HBD (Hisnul Muslim corpus)	HBD dua

Two things were absent from every site examined. No site paired its Hijri date with a cited Bangladesh moon-sighting source; ihadis says only that dates "may differ based on moon sighting". No site showed named hadith commentary (sharh) in Bangla (IH; HBD hadith).

The search-results evidence in keyword research adds further gaps, in places where no incumbent ranks with a good tool:

- **"tasbih counter online"**: Bing-BD returns only global English tools, no Bangla one (Bing).
- **যাকাত ক্যালকুলেটর** (zakat calculator): Google-BD shows mostly charities and foreign tools (SERP).
- **ফারায়েজ ক্যালকুলেটর** (faraid/inheritance calculator): thin tools and a Czech download site (SERP).
- **কুরআন হিফজ করার সহজ উপায়** ("easy way to memorise the Quran"): articles and videos only, no tool (Bing).

What each competitor does exceptionally well, and where it fails

quran.com has the best Bangla Quran depth on the web. It offers four named Bangla translations: Taisirul Quran (Tawheed Publication), Sheikh Mujibur Rahman (Darussalaam), Rawai Al-bayan (Bayaan Foundation) and Dr. Abu Bakr Muhammad Zakaria. It adds four named Bangla tafsirs, Bangla word-by-word glosses and a working PWA (API translations; manifest). It fails Bangladeshi users in two specific ways. Its transliteration is **Latin ("al-ḥamdu"), not Bangla script**. And its core search API matches the translators' word সালাত (salat) but **returns 0 for নামাজ (namaz)**, the word people actually type. The UI found 199 results for নামাজ, but the snippets shown were English lines (API search; UI search).

hadithbd.com excels at sourced depth. Each hadith names its edition (e.g. "সহীহ মুসলিম (ইসলামিক ফাউন্ডেশন)", Sahih Muslim, Islamic Foundation edition), shows Arabic with and without diacritics, gives a grade and the narrator, and has the only Banglish-aware search (hadith 4172). Its failures:

- It has **no prayer times, Qibla or zakat**.

- The hadith review field ("পুনঃনিরীক্ষণঃ") is empty.
- The misspelling "নামজ" matched "নামজাদা" (a word meaning "renowned") instead of correcting to নামাজ.
- Its AI answers are machine-generated, not scholar-reviewed.
- One developer runs it, its content is "সর্বস্বত্ব সংরক্ষিত" (all rights reserved), and a Cloudflare challenge blocks non-browser clients (search misspelling).

muslimbangla.com wins on breadth and human service. It has Quran with Bangla উচ্চারণ (pronunciation), hadith, 40 dua categories, district prayer times, a BD-unit zakat calculator and masail answered by named muftis (sura 1; masails). Its zakat calculator is unusually local: it applies BAJUS gold prices with a 17% deduction and states a price date, but in an ambiguous format ("১১-০৩-২৬"). It adds the disclaimer "যোগ্য মুফতির পরামর্শ নিন" (consult a qualified mufti) (zakat). It fails on provenance: **duas show Arabic, উচ্চারণ and meaning but no source hadith or book**, and the Quran translator and tafsir author are unnamed. Its PWA manifest is misnamed "হজ্ব ও উমরা গাইড" (Hajj & Umrah guide) (dua; manifest).

ihadis.com (IRD) has the broadest hadith set, including the Silsila Sahiha and Dhaif series. It also has the richest prayer-time page: forbidden times, nafl times (tahajjud, ishraq, duha), sehri/iftar and a monthly table. Its failures:

- The default **Asr is the non-Hanafi time**.
- The grader and translator are not named.
- Search results take more than 6 seconds to render on the client.
- Quran and dua are scattered across quranmazid.com and duaruqyah.com.
- The manifest has no service worker.

(Bukhari; prayer times; manifest).

islamqa.info/bn is the most carefully cited Q&A source. It gives Quran ayat and hadith numbers (e.g. Bukhari 5066, Tirmidhi 2777), names one scholar, shows dates and view counts (222,721 on one answer), and has the only search that fixes typos. That search is Google-powered: "নামজ" became "নামাজ site:islamqa.info/bn", with ~268 results (answer 329; search). It fails as a Bangladeshi daily tool. It offers a single Saudi Salafi perspective, a Hijri date one day ahead of Bangladesh, Bangla with typos ("নিয়ন্ত্রয়ের"), and no Quran, prayer or dua modules.

alkawsar.com is fast (headless LCP ~1.2 s) and authoritative. It has named authors and a Q&A archive from 2007 to 2026 (Q&A). But its search is exact-match only: "নামজ" returns "কোনো কিছু পাওয়া যা[য়নি]" (nothing found) (search).

salat.habibur.com is the most transparent prayer-time tool. It shows coordinates, Qibla, calculated and rounded times, both Asr times and the night thirds, and it has an API. Its UI is dated, it has no manifest, and it points users to a newer domain (salat.habibur.com).

sunnah.com offers grading toggles but only partial Bangla: Bukhari and Nawawi40 have it, Muslim book 1 does not. A Bangla search for সালাত returned "Sorry, there were no results found" (search).

islamhouse.com/bn has 1,990 free Bangla items. Its search dropped the query, and it was the slowest site measured (LCP ~4.5 s) (home).

quraanshareef.org, the top web result for "বাংলা কুরআন" (Bangla Quran), is a bare reader. Its translator is unnamed and it has no উচ্চারণ, tafsir or search.

The government sites fail almost completely. quran.gov.bd (© 2012, Ministry of Religious Affairs) serves verses as images, has no search, and links to Adobe Flash. The Islamic Foundation portal has no prayer timetable, Hijri calendar or moon-sighting notice; its Quran links go to Google Drive, and its TLS certificate chain is broken (quran.gov.bd; IF).

Search tests: the everyday word fails where the scholarly word works

Bangla has competing spellings and synonyms for core terms: নামাজ / নামায / সালাত (all meaning "prayer"), with নামাজ dominant in search at about 18× নামায (see keyword research). People also type in romanised "Banglish". The team ran the same queries across sites.

Site	সালাত (salat)	নামাজ (namaz)	"নামজ" (misspelling)	Banglish "namaj"
quran.com	API: 286 results	**API: 0**; UI: 199 (English snippets)	API: 0	not tested
sunnah.com	**"no results"**	not reported	not reported	not tested
hadithbd.com	not tested separately	not tested separately (included in the "namaj" mapping)	**1 irrelevant hit** ("নামজাদা")	**1,000+ results**, mapped to নামায / নামাজ / সালাত

Site	সালাত (salat)	নামাজ (namaz)	"নামজ" (misspelling)	Banglish "namaj"
ihadis.com	8,002 (after full render; a 6-second wait showed "০০", zero)	1,396	72 hits, unclear basis	not tested
alkawsar.com	works	not reported	**"nothing found"**	not tested
islamqa.info/bn	not reported	works	**auto-corrected to নামাজ** (~268 results, via Google CSE)	not tested
islamhouse.com/bn	—	query dropped by redirect	—	—

Sources: QC API, SN, HBD namaj, HBD নামজ, IH, ALK, IQA, IHS.

The pattern is consistent. **Sites that index scholarly translations match the translators' vocabulary (সালাত), not the users' (নামাজ).** Without a synonym layer, Banglish transliteration and typo tolerance, a Bangla Islamic search box fails on the most common query. Muslimbangla's site search and Banglish handling on quran.com were not tested.

Asr, Hijri and Bangla dates disagree across sites on the same day

Asr. For Dhaka on 5 November 2026:

- ihadis.com (Karachi method) showed **Asr at 02:54 PM**, the Shafi'i/standard first-shadow time, while mentioning that the madhhab can be customised.
- muslimbangla.com and salat.habibur.com showed **3:41–3:42 PM**, the Hanafi second-shadow time.
- salat.habibur.com labels both: "জোহর শেষ (শাফি) 2:54" (end of Zuhr, Shafi'i) and "আসর (হানাফি) 3:42" (Asr, Hanafi).

(IH; MB; SH). Most Bangladeshi users follow Hanafi practice. A default non-Hanafi Asr therefore risks looking *wrong* to them, and Play reviewers explicitly complain about this (see report 06). The safest observed pattern is salat.habibur's: show both, labelled.

Hijri. ihadis (24 Jumada al-Awwal 1448), muslimbangla ("২৪ জুমাদাল উলা, ১৪৪৮") and salat.habibur ("২৪-জামাদিউল আউয়াল") agreed. islamqa's header showed "২৫ জুমাদাল আউওয়াল ১৪৪৮ AH", one day ahead (MB today; IQA). This fits Bangladesh's usual one-day lag behind Saudi Arabia, documented for both Eids in 2026 (report 06). The Bangladesh sites are evidently applying a local offset, but **none cites the National Moon Sighting Committee or the Islamic Foundation as its source**.

Bangla calendar. ihadis showed "21 Kartik 1433" and muslimbangla "20 Kartik" for the same day (IH; MB). Under the revised Bangladesh calendar, where Kartik begins on 17 October, 5 November is 20 Kartik, which would make ihadis off by one. We did not verify this against an official source.

Offline and PWA support is mostly cosmetic

Only **quran.com** (manifest + Workbox-style sw.js) and **islamqa.info** (manifest + service-worker.js) serve a real installable, offline-capable web app (QC sw.js; IQA service worker). The rest fall short:

- **ihadis** ships a manifest but /sw.js returns 404.
- **muslimbangla** ships a manifest named for its Hajj guide.
- **quranmazid**'s manifest is 404.
- **assunnahfoundation.org** returns its single-page-app HTML for /sw.js and /manifest.webmanifest, so it only *looks* like a PWA.
- The Kaler Kantho and Jugantor manifests exist for push notifications (Feedify), not offline reading.

(IH manifest; ASF sw.js; Kaler Kantho). Offline reading is praised in app reviews (report 06), so a working offline web app would be a real, if unproven, differentiator on the Bangla web.

Ads: absent on Islamic sites, heavy on the pages that actually rank

No dedicated Islamic site we examined showed ads. Newspapers did:

- Jugantor's Islam section rendered **2 AdSense units and 3 ad iframes**.
- Prothom Alo's religion section rendered **6 ad iframes** in about **3.0 MB of HTML**.
- Kaler Kantho loads Google Publisher Tag.

(Jugantor; Prothom Alo). The ad problem in search is the **SEO blogs and caption sites that rank for dua and topic-hadith queries**. The keyword team counted ad-script references in page HTML. These are counts of ad-script mentions, **not counts of ad units**:

Page	Ad-script references	Other signals
namerorthobangla.com (সকাল সন্ধ্যার দোয়া ও জিকির, morning and evening duas and zikir)	**69**	
bd24live.com (মা নিয়ে হাদিস, hadith about mothers)	44	0 Arabic characters; 1 reference
islambangla.com (সূরা হাশরের শেষ তিন আয়াত, last three ayat of Surah Hashr)	38	**0 Arabic characters on a Quran-verse page**

By contrast, muslimbangla.com's Q&A page for দুশ্চিন্তা দূর করার দোয়া (dua for relief from worry) had **0 ad scripts and 8 references** (Bing সকাল সন্ধ্যার দোয়া ও জিকির; Bing সূরা হাশরের শেষ তিন আয়াত; Bing দুশ্চিন্তা দূর করার দোয়া).

A further nuance: the **Muslim Bangla Android app is flagged "ads: yes"** on Google Play, even though its website shows none (Play: Muslim Bangla). Against dedicated sites, then, ad-free is table stakes. Against the blogs and newspapers that win many dua and hadith clicks, it is a real quality gap.

Conclusion

The audit changes the question from "what features are missing?" to "what is missing *with provenance*?". Most features exist somewhere on the Bangla web: pronunciation on muslimbangla, named tafsir on quran.com, graded hadith on hadithbd, both Asr times on salat.habibur. They are scattered across domains, each with a different trust gap. The cheapest wins for a new platform are unglamorous:

- a search layer that treats নামাজ, নামায, সালাত and "namaj" as one word and forgives typos;
- a name on every translation, grade and dua;
- a labelled Hanafi default with the alternative Asr visible;
- a Hijri date that states its moon-sighting source.

The incumbents have each solved one of these. None has solved all of them. Content and feature gaps turns these gaps into opportunities.

Confidence & limitations

- **High:** feature presence and absence on the pages examined; search test results; Asr, Hijri and Bangla-date readings for 5 Nov 2026 (directly observed).
- **Medium:** "not available" entries, which mean not found in navigation or on the pages examined; muslimbangla's district picker and dark-mode states (inferred from UI strings).
- **Not measured:** PageSpeed scores (API 429); logged-in features; native-app features; translation quality (needs native-speaker review). Ad-script counts are heuristics, not ad-unit counts.
- The Google results pages used to pick the "top" prayer-time and Bangla Quran sites were loaded with `gl=bd&hl=bn` from a **non-Bangladesh IP**, so those rankings are indicative only. One headless navigation was hijacked by another agent's tab and discarded. See methodology.

CHAPTER 6

Bangladeshi users demand local time, sources and dignity

ABOUT THIS CHAPTER

In plain words. Many ideas about what Bangladeshi users "need" are assumptions. This chapter tests each assumed need against real evidence (mainly 11,671 Google Play reviews of 22 Islamic apps on the Bangladesh store, plus search data and statistics) and rates it Strong, Moderate, Weak or Not evidenced.

Key takeaway. The strongest needs are about **correctness and local fit**: Bangla-first content, Bangla-script pronunciation, prayer and Sehri/Iftar times that match the Islamic Foundation for each district, a Hijri date that follows Bangladesh's moon sighting, recognising local spellings and Banglish, free access, visible references, and no ads near sacred text. Users describe ads (especially indecent ones) as a religious offence, not just an annoyance, and treat a single text error as a reason to distrust a whole app.

Why it matters for the product. It tells the team which requirements are proven and which are guesses. Just as importantly, it lists assumed needs that the evidence **did not** support, such as font-rendering problems, demand for logins, or a madhhab picker that users welcome.

How to use this chapter. Use the summary table as a checklist of non-negotiable requirements, and the "not supported" section to avoid building things nobody asked for.

Watch out for. The reviews are of apps, not websites, and Google Play does not confirm a reviewer's country. Bangla-script reviews were used as the best signal of Bangladeshi users.

Key findings

- **These needs have Strong evidence**, meaning more than one evidence type points the same way:
- Bangla-first content.
- Arabic with **Bangla-script pronunciation (উচ্চারণ)**.
- **District prayer and Sehri/Iftar times that match the Islamic Foundation (IF)**.
- A **Hijri date that follows Bangladesh's moon sighting**.
- Handling of **local spelling variants and Banglish**.
- **Free access to sacred text**.
- **Visible references**.
- **No ads around sacred content**, which users frame as a religious wrong, not merely an annoyance.
- **In the largest corpus collected (11,671 Google Play reviews of 22 Islamic apps on the Bangladesh store), ads are the top complaint.** 551 reviews mention ads, 349 of them rated 3★ or lower. Paywalls come next (185 mentions, 116 at 3★ or lower).
- **Users report text errors verse by verse and treat them as trust failures.** Pronunciation is wanted, but users also catch every transliteration slip.
- **Moderate evidence** supports low-bandwidth design, offline use, large fonts and simple UI for older readers, a Bangla calendar date, madhhab-aware prayer times (which need careful handling), scholar Q&A, and daily trackers.
- **Weak or no evidence** was found for several assumed needs. These are summarised in the section on assumed needs:
- Women-specific feature requests (only a gender gap in access is documented).
- Colloquial rather than archaic Bangla (one high-vote review).
- Upazila-level times (two reviews).
- Shared family phones (two reviews).
- **Not supported:** Bijoy/Unicode font rendering as a current problem; demand for accounts or login; authenticity-checking as a search-traffic driver; and a madhhab picker as something users welcome.
- **Caveat on the evidence base.** Almost all user voice comes from **app reviews, not website users**. Play cannot confirm a reviewer is in Bangladesh, so we lean on Bangla-script reviews. Reddit, Facebook groups and YouTube comments were not retrievable.

Evidence base and how needs are rated

The main user-voice source is a direct scrape of Google Play's Bangladesh storefront (`country="bd"`, Bangla and English, newest and most-relevant sorts), run with the open-source `google-play-scraper` library on 2026-11-05. It yielded **11,671 reviews across 22 apps**. **3,611** of them contain Bangla script and **1,054** are rated 1–2★. The raw file is at `docs/research/data/raw/play-reviews/reviews.json` (see report 10). Theme counts come from keyword matching and are **indicative only**. The sample is not random; it consists of the newest and most "relevant" reviews.

Each quote below is a verbatim Play review with its app, date and star rating. Play has no per-review permalinks, so each link goes to the app's Bangladesh-store listing. English glosses are translations. A few review dates are older (2019–2021), but are kept where they carry high helpful-vote counts. Secondary sources are news, industry and academic reports. Search-demand figures come from keyword research.

Rating scale.

- **Strong:** at least two independent evidence types agree, for example measured search demand plus several high-vote reviews, or a documented factual divergence plus user complaints.
- **Moderate:** one evidence type with several data points, or secondary data not tied to Islamic-product use.
- **Weak:** one or two isolated quotes, or an indirect inference.
- **Not evidenced:** we searched and found nothing, or found contrary evidence.

#	Candidate requirement	Rating	Strongest evidence
1	Bangla-first content and UI	**Strong**	Bangla-first sites lead traffic; 498 of 582 namaz/Q&A keyword rows are Bangla script; reviewers who "cannot read Arabic"
2	Simple, colloquial Bangla	**Weak**	One review (161 helpful votes) asking for colloquial instead of sadhu (formal literary) Bangla; contested word choices
3	Arabic + Bangla-script pronunciation	**Strong**	Ahrefs >10K/month for "আয়াতুল কুরসি বাংলা উচ্চারণ" (Ayatul Kursi Bangla pronunciation); Trends "বাংলা উচ্চারণ" rising; many reviews, one with 231 helpful votes
4a	District prayer times matching IF	**Strong**	Reviews with 188 and 196 helpful votes; "follow IF times"; "3–5 minutes off"; head keywords are prayer-time queries
4b	Upazila-level times	**Weak**	One request plus one missing-area complaint
5	Hijri date per Bangladesh moon sighting	**Strong**	Bangladesh one day behind Saudi Arabia for both Eids in 2026; sites differ by a day; reviews on "wrong Arabic date"
6	Sehri/Iftar by district	**Strong**	Trends: সেহরির শেষ সময় ("end of sehri time") 0.34× and ইফতারের সময় ("iftar time") 0.33× of the prayer-time anchor; 13-minute spread across divisions; a reviewer who missed suhoor
7	Local terminology and spelling variants	**Strong**	দোয়া is ~24× দুয়া (two spellings of "dua"); নামাজ is ~18× নামায; quran.com's search fails on নামাজ
8a	Family context: shared phones	**Weak**	Two "parent's phone" reviews
8b	Family context: life events (names, aqiqah)	**Moderate**	ইসলামিক নাম ("Islamic names") 0.52×; মেয়েদের ইসলামিক নাম ("Islamic names for girls") 19K/month
9	Low bandwidth / data cost	**Moderate**	Data costs BDT 25–35/GB, median mobile ~37 Mbps; 175 reviews on offline/data/size, mostly about app size
10a	Free access to sacred text	**Strong**	185 paywall mentions (116 at ≤3★); "ধর্ম বিক্রি করে খাওয়া বন্ধ করুন" ("stop selling religion")
10b	Donation model accepted	**Moderate**	Reviews proposing donation instead of ads; a request to ease paying from Bangladesh; complaints about "forced donation" nags
11	Offline use	**Moderate** (apps) / **Not evidenced** (web)	Praise for "নেট ছাড়া" ("without internet"); complaints when offline mode fails
12	Simple UI and older users	**Moderate**	Font-size and "elderly reader" reviews; "too complicated now"; a GPS-only complaint with 146 helpful votes
13	Women users	**Weak**	Gender gap (40% vs 24% mobile internet use) is secondary data; only ~61 women-related reviews, many false positives; women's fiqh queries visible in search

#	Candidate requirement	Rating	Strongest evidence
14	Trusted references	**Strong** (for trust) / **Not evidenced** (as a traffic driver)	"সনদ তেমনই সহীহ" ("the chains of narration are just as sahih"); "authentic references"; grading complaints; but জাল হাদিস ("fake hadith") <100 searches/month
15	Madhhab sensitivity	**Moderate**	Hanafi users alarmed by mismatched times; Ahl-e-Hadith users asking for their own Asr; others rejecting the choice; only 8 explicit reviews
16	Ads as religious offence	**Strong**	551 ad mentions; "নাজায়েজ" ("impermissible") and "অশালীন" ("indecent"); 1–2★ share is 41% for ad-heavy Wemu vs 2–5% for local ad-light apps
17a	Font size	**Moderate**	Most of the 76 font-related reviews concern size
17b	Font rendering (Bijoy/Unicode)	**Not evidenced**	No 2017–2026 review complaining of broken conjuncts or Bijoy garbling
18	Bangla calendar date (বঙ্গাব্দ, Bangla year)	**Moderate**	Four apps' reviewers asking for it or correcting it; sites differ by a day

Local time is a religious obligation, not a convenience

District times that match the Islamic Foundation (Strong). Bangladeshi users treat IF's published schedule as the standard, and they notice deviations of a few minutes.

- An Ibadah review with 188 helpful votes (2020-04-10, 5★) noted that "in Bangladesh there is fixed namaz schedule for each div[ision]".
- Another with 196 helpful votes (2020-10-31, 5★) praised "separate timings for all the districts".
- A 2★ review (2020-04-25) was blunt: "আপনারা দিয়েছেন বাংলাদেশের সময় অথচ ইসলামিক ফাউন্ডেশন এর সময় অনুযায়ী না... দয়া করে নামাযের সময় টা ইসলামিক ফাউন্ডেশন এর সময়,অনুযায়ী করে দিন" [You've given Bangladesh times but not per the Islamic Foundation... please follow Islamic Foundation times].
- A 2026-10-10 review said "প্রাই অ্যাপে ৩/৫ মিনিট কম বেশি দেওয়া হয়... ইফতারের জন্য তত সঠিক টাইম খুব জরুরী" [most apps are 3–5 minutes off... accurate time is very important for iftar].

(Play: Ibadah). Search demand points the same way. The top Bangladesh keywords for muslimbangla.com are all prayer-time queries: **নামাজের সময়সূচি** ("prayer schedule", 37K/month) and **ফজরের নামাজের সময়** ("Fajr prayer time", 31K). Queries also carry district suffixes, such as **আজকের নামাজের সময়সূচী ঢাকা** ("today's prayer schedule Dhaka", 7.3K) (Ahrefs muslimbangla.com).

There is a complication: **the IF website publishes no timetable we could find** (IF). Newspapers republish IF's schedules daily (Jagonews24). How districts are derived is itself disputed. 2026 Ramadan coverage described adding or subtracting up to 9 minutes from Dhaka (Ittefaq). But a Jugantor search snippet (the page itself returned 403, and its date is unclear) reported that IF called that method "ভুল ও ভিত্তিহীন" (wrong and baseless), because IF now publishes a separate schedule for every district (Jugantor). Earlier years cited +11/−10 minutes (bdnews24 2023). **IF's actual calculation parameters were not obtained**: its Fajr/Isha angles and its Asr method. A low-authority source says its district schedules follow Hanafi practice (teachers.gov.bd blog). This must be verified against an IF document before launch.

Upazila-level times (Weak). Only two pieces of evidence surfaced. Muslims Day (2025-03-01) asked: "উপজেলাভিত্তিক সময়সূচী ইফতার ও সেহরীর জন্য দেখালে ভালো হতো" [it would be good to show upazila-level Sehri/Iftar schedules] (Play: Muslims Day). A Technobd reviewer (2026-08-16) could not find the Sylhet area আম্বরখানা (Amberkhana) in the location list (Play: Technobd). Search queries such as "iftar time today mirpur" show sub-district intent exists, but not its size.

Sehri and Iftar by district (Strong). On Google Trends, **সেহরির শেষ সময় ("end of sehri time") runs at 0.34× and ইফতারের সময় ("iftar time") at 0.33×** of the year-round prayer-time anchor, concentrated in Ramadan (Google Trends BD). On 25 February 2026, divisional iftar ranged from Sylhet 5:54 to Rajshahi 6:07, a **13-minute spread**. These figures come from a search summary of Deshrupantor and should be re-checked. The cost of getting it wrong is personal. One Amader Lab review with 75 helpful votes (2023-04-13, 3★) said: "I missed my suhoor only because I followed the time on the app... even though I turned 'GPS' the time was inaccurate" (Play: Amader Lab).

Hijri date by Bangladesh moon sighting (Strong). In 2026, Bangladesh celebrated **Eid-ul-Fitr on 21 March, one day after Saudi Arabia**, because the Shawwal moon was not sighted on 19 March. bdnews24 notes that Bangladesh "traditionally" celebrates a day later (Daily Star; bdnews24). **Eid-ul-Azha was 28 May, against Saudi Arabia's 27 May**, after the National Moon Sighting Committee met at

Baitul Mukarram (bdnews24; Financial Express). On 5 November 2026, the Bangladesh-oriented sites showed 24 Jumada al-Awwal while islamqa showed the 25th (see report 05). Users complain when apps get this wrong:

- "আরবি তারিখ চাঁদ দেখার উপরে নির্ভর করে দেখায় না অনেক সময় ভুল হচ্ছে" [the Arabic date isn't based on moon sighting; it's often wrong] (Islami Jindegi, 2022-12-25, 3★) (Play: Islami Jindegi).
- "ভালো না। আরবি তারিখ ভুল দেয়" [not good; gives the wrong Arabic date] (Muslim Bangla, 2026-05-16, 1★) (Play: Muslim Bangla).

One reviewer added a finer point: "আরবী দিন শুরু হয় মাগরিবের পর থেকে" [the Arabic day starts at Maghrib]. That is a **Weak** but specific request for the date to roll over at sunset. Only 26 reviews in the corpus mention Hijri dates or the moon. The rating is Strong because the factual divergence is documented, not because complaints are numerous.

Bangla calendar date, বঙ্গাব্দ (Moderate). A Dawat-e-Islami review with 16 helpful votes (2025-01-26) said: "অ্যাপটির সাথে বাংলা মাস এড করে দিলে আমাদের জন্য উপকার হতো। নতুবা বাংলা মাসের জন্য আরেকটা অ্যাপ নামাতে হয়।" [Adding the Bangla month would help us; otherwise we have to download another app for it.] (Play: Dawat-e-Islami). Reviews of Muslims Day, Deen and Muslim Bangla ask for the date or correct it (Play: Muslims Day). On the web, ihadis and muslimbangla disagreed by a day on 5 November (report 05).

Language: Bangla first, pronunciation essential, spellings plural

Bangla-first (Strong). The traffic leaders are Bangla-first sites (report 02). Of 582 namaz, Q&A, Ramadan and lifestyle keyword rows, **498 are in Bangla script**, 34 in Banglish, 26 in English and 24 mixed (keyword research). Among apps, local Bangla-first apps draw **only about 2–5% 1–2★ reviews**, against 17–41% for ad-heavy global apps (our count of the corpus). Ads are one confound in that comparison. The reason for Bangla-first is stated plainly in this kutblog review (2026-04-13, 5★): "আমি বাংলা পারি, আরবি পারিনা! এজন্য আমি বাংলাতেই পড়ি। যারা আরবি জানে না বা বৃদ্ধ,বয়স হয়ে গেছে আরবি শিখা তো সম্ভব না..." [I can read Bangla, not Arabic, so I read in Bangla. Those who don't know Arabic, or are old, can't learn Arabic...] (Play: kutblog).

Arabic with Bangla-script pronunciation (Strong, with a liability attached). Demand is measured:

- Ahrefs puts **"আয়াতুল কুরসি বাংলা উচ্চারণ" ("Ayatul Kursi Bangla pronunciation") above 10,000 searches a month** in Bangladesh (Ahrefs ayatul kursi).
- Google Trends shows **"বাংলা উচ্চারণ" ("Bangla pronunciation") rising from 32.7 to 35.4** between 2023 and 2026, while most Islamic terms fell. The term also has non-religious uses (Trends quran set A).

Users ask for it in reviews:

- "ভাই দুয়া ও জিকিরের আরবি উচ্চারন টা বাংলায় দেন" [Brother, please give the Arabic pronunciation of the duas and dhikr in Bangla] (Ibadah, 2026-07-18, 5★, **231 helpful votes**) (Play: Ibadah).
- "দোয়া গুলোর উচ্চারণ এবং অর্থ বাংলা দিলে আরো অনেক বেশি ভালো হতো" [it would be much better if the duas had Bangla pronunciation and meaning] (Muslim Pro, 2020-04-23) (Play: Muslim Pro).

The same users audit the output closely:

- "সুরা মুলক ১৭ নং আয়াতে ভুল আছে এরকম এপস থেকে সতর্ক থাকবেন" [there's a mistake in Surah Mulk ayah 17; beware of apps like this] (E-book Library, 2025-06-10, 1★) (Play: E-book Library).
- A Technobd reviewer flagged words missing from the Bangla pronunciation of Surah Fatir 35:11 (Play: Technobd).

Audio serves as the check. A Greentech Al Quran reviewer wrote: "অডিও উচ্চারণ শুনে শুনে ভুল গুলো ঠিক করি" [by listening to the audio I correct my mistakes] (Play: Greentech Al Quran). The Greentech translation platform itself carries a string warning that transliteration "can cause incorrect pronunciation and may hinder the proper learning of Tajweed" (translate.gtaf.org). On the web, only muslimbangla.com offers Bangla-script pronunciation per verse (report 05).

Simple, colloquial Bangla (Weak). The clearest request is a single kutblog review (2020-05-16, 5★, **161 helpful votes**): "if the Bengali pronunciation was in colloquial language instead of Sadhu (সাধু) language, it would be easier to understand." Other reviews show translation vocabulary is contested rather than uniformly "too hard":

- One reviewer asked for the Islamic Foundation translation.
- Another criticised IF's rendering 'মহাপরাক্রান্ত' (a formal epithet) for Al-'Aziz (the Mighty).
- A third asked Greentech to replace "নারী" with "মহিলা" (two Bangla words for "woman") on ideological grounds.

(Play: kutblog; Play: Technobd; Play: Greentech Al Quran). This points to **named, switchable translations** more than to one "simple" version. Requests for more tafsir also appear, naming Jalalain, Ma'ariful Quran, Baydawi and "সংক্ষিপ্ত তাফসীর" (a short tafsir).

Local terminology and spelling variants (Strong). Search shows a dominant everyday spelling for each core term:

- **দোয়া is ~24× দুয়া** (two spellings of "dua").
- **নামাজ is ~18× নামায** (two spellings of "namaz").
- **হাদিস is ~6.6× হাদীস** (two spellings of "hadith").
- **জিকির is ~26× যিকির** (two spellings of "zikir").

Latin "surah mulk" is ~7× সূরা মুলক (Bangla-script "Surah Mulk") (keyword research; Ahrefs surah mulk). Prayer-time queries also arrive in Banglish, for example "namajer somoy" and "fazar er namaj er time" (Similarweb salat.habibur.com). The audit found that quran.com's API returns **0 results for নামাজ** and that only hadithbd handles Banglish (report 05). A Banglish complaint about prayer alarms, "fozor a onk somoy baje onk somoy baje na" [at Fajr it sometimes rings, sometimes doesn't] (Muslim Bangla, 2026-09-23), shows users *write* in Banglish too (Play: Muslim Bangla).

Money and ads: free access is expected, and ads near the Quran offend

Ads as religious offence (Strong). Ads are the single largest complaint theme: **551 reviews, 349 of them at 3★ or lower**. Wemu, Quran Majeed and Muslim Pro account for the most mentions. Users frame ads in moral terms:

- "এরকম একটা ইসলামী অ্যাপে নাজায়েজ বিভিন্ন বিজ্ঞাপন দেয়ার মানে কি? ... অর্থ ডোনেশন পদ্ধতি রাখলেই তো হ..." [Why show impermissible ads in an Islamic app like this? ... a donation system would do...] (Muslim Pro, 2020-11-20, 3★) (Play: Muslim Pro).
- "suppose, you're reading a surah and all of a sudden advertisement related to job or fridge... pops up, how could you feel as a Muslim?" (kutblog, 2024-07-28, 2★, 63 helpful votes) (Play: kutblog).
- An Ibadah reviewer (2026-09-16, 2★) objected to an "অশালীন ad" (indecent ad) showing a woman in improper dress (Play: Ibadah).

The share of 1–2★ reviews tracks ad load: **Wemu 41.1%, Muslim Pro 18.9% and Quran Majeed 17.3%, against 2.2% for Muslim Bangla and hadithbd's app**. Ad-free status is praised just as explicitly: "you won't find any ads because earning money by showing ads is kind of mixture of Halal and Haram... Instead of showing ads they take donation" (IRD Al Hadith, 2020-10-28, 5★, **212 helpful votes**) (Play: IRD Al Hadith). On the web, dedicated Islamic sites are already ad-free. The offence happens on the newspapers and SEO blogs that win many dua clicks (report 05).

Free access to sacred text (Strong). Paywalls draw 185 mentions, 116 of them at 3★ or lower. A Tafhimul Quran review (2025-05-06, 1★) shows the depth of feeling: "দিন ধর্মের জন্য কাজ করে আপনি তো পেমেন্ট ছাড়া ভিতরে ঢুকতে দিচ্ছেন না?... আমাদের অনেকের তো টাকা নেই... ধর্ম বিক্রি করে খাওয়া বন্ধ করুন।" [You claim to work for the religion but won't let us in without paying? ... Many of us have no money... Stop making a living by selling religion.] (Play: Tafhimul Quran). From earlier research (Nov 4 2026), Muslim Pro's own help centre carries an article titled "Is it acceptable to pay for a religious application" (Muslim Pro).

Donation model (Moderate). Users repeatedly propose donation as the alternative to ads. A Greentech reviewer (2026-10-08, 5★) asked: "বাংলাদেশ থেকে টাকা নেওয়ার ব্যবস্থা সহজ করুন অনেকেই আপনাদের কে হেল্প করতে চাই ডোনেশন করতে চায় কিন্তু অনেকেই পারে না কঠিন" [make it easier to accept money from Bangladesh; many want to donate but can't, it's hard] (Play: Greentech Al Quran). The review does not name a payment method; bKash or Nagad is our inference. But **donation that behaves like a paywall is resented**:

- "My father already donated, yet the reminder never stops" (Tafhimul Quran, 2025-11-01, 1★, 32 helpful votes).
- "you can't use this app without donations, I don't like this system" (Deen, 2024-09-21, 1★).

(Play: Tafhimul Quran; Play: Deen).

Trust: sources, scholars and the madhhab question

Trusted references (Strong for trust, Not evidenced as a traffic driver). Praise singles out sourcing:

- "ডিজাইন যেমন চমৎকার, সনদ তেমনই সহীহ।" [The design is as excellent as the chains of narration are sahih.] (IRD Dua & Ruqyah, 2021-11-27, 5★) (Play: IRD Dua).
- "The best thing is all of them have authentic references" (Hisnul Muslim Bangla, 2024-08-02, 5★, 32 helpful votes) (Play: Hisnul Muslim BN).

Complaints single out errors:

- "সহীহ মুসলিমের একটা হাদিসের মধ্যে- একহাদীসের টেক্সটের অধীনে অন্য হাদিসের তরজমা দেওয়া... রিপোর্ট করেছি- কিন্তু কোন রেসপন্স নেই।" [In Sahih Muslim, one hadith's text has another hadith's translation under it... I reported it but got no response.] (IRD Al

Hadith, 2026-06-09, 1★) (Play: IRD Al Hadith).

- A Greentech Hadith reviewer (location unknown) flagged hadiths marked Daif by Darussalam but Sahih/Hasan by Albani (Play: Greentech Hadith).

In search, users attach authority tags to fiqh queries: "... আল কাউসার" (Al-Kawsar, the Hanafi monthly), "দলিলসহ" ("with evidence"), and named scholars such as শায়খ আহমাদুল্লাহ (Shaykh Ahmadullah) (Autocomplete). However, **"জাল হাদিস" ("fake hadith") and every authenticity variant draw fewer than 100 searches a month** (Ahrefs জাল হাদিস). Sourcing builds trust and retention, but it will not bring traffic by itself.

Facebook misinformation is a real background risk. A Jahangirnagar University study of 7,350 Facebook comments across five religious-misinformation cases found **69.3% of users tended to believe the misinformation** (UNB; Data in Brief). Those cases were communal and political incidents, not fake hadith.

Scholar Q&A (Moderate). One user wrote "ইসলামী প্রশ্নঃ করেছি এবং ২ দিনের ভিতর সঠিক সমাধান পেয়েছি।" [I asked an Islamic question and got a correct answer within 2 days.] (Muslim Bangla, 2026-10-23, 5★). Another asked a different app to "মুসলিম বাংলার মতো প্রশ্ন করার অপশন যোগ করুন" [add a question option like Muslim Bangla's] (Islami Jindegi, 2025-09-08). Named preachers also pull users in: a kutblog reviewer asked for the voices of Mizanur Rahman Azhari and Abu Toha Adnan (Play: Muslim Bangla; Play: Islami Jindegi; Play: kutblog).

Madhhab sensitivity (Moderate). The signal runs in three directions:

- **Hanafi users are alarmed by mismatched times.** "ভাই আমাদের হানাফি মাযহাবের সময়ের সাথে এই সময়সূচী মিলেনা কেনো???? তাহলে কি এটা শীয়াদের জন্যে ভাই" [Why doesn't this schedule match our Hanafi madhhab time? Is it for Shias then?] (Ibadah, 2022-07-03, 1★).
- **Ahl-e-Hadith users want their own Asr.** "ভালো শুধু হানাফিদের জন্য নয় আহলে হাদিসদের জন্য টাইম থাকা উচিত" [there should be times for Ahl-e-Hadith too, not only Hanafis] (Muslim Bangla, 2026-08-04, 5★).
- **Some users reject being asked to choose.** "পছন্দের মাযহাব সম্পর্কে প্রশ্ন করাটা ভালো লাগলো না। আমরা সবাই মুসলিম" [I didn't like being asked my preferred madhhab. We are all Muslims.] (Ibadah, 2026-04-17, 4★).

(Play: Ibadah; Play: Muslim Bangla). Explicit sectarian reviews are rare: **8 of 11,671**. Search shows school labels appended to queries, such as "বিতর নামাজের নিয়ম আহলে হাদিস" (how to pray witr, Ahl-e-Hadith) and "namaz time dhaka today hanafi". It also shows rival answers on the same results page with no labels (keyword research). The evidence supports a **Hanafi default with the alternative Asr shown and labelled by method** (first or second shadow) rather than by sect. It does not support forcing users to pick a camp.

Device, bandwidth, age and gender

Low bandwidth (Moderate). The secondary data is solid: retail data at **BDT 25–35 per GB** (Bonik Barta), median mobile download of **36.84 Mbps** (DataReportal) and a budget-Android handset base (report 01). The user voice is mostly about **app size**, not page weight:

- "After downloading 70+ Surah with Bangla translation the storage goes upto 5.90gb" (Technobd, 2024-03-24).
- Users who got an app via SHAREit then paid mobile data for content downloads, "so it was expensive for them" (IRD Al Hadith, 2019-02-01, 59 helpful votes).

(Play: Technobd; Play: IRD Al Hadith). The offline/internet/data theme has 175 mentions, 61 of them at 3★ or lower. For a website, this argues for text-first pages and on-demand audio. There is no direct evidence that web users abandon heavy pages.

Offline (Moderate for apps, Not evidenced for web). Users praise working without a connection:

- "নেট ছাড়া অডিও কোরআন তেলাওয়াত শোনা যাচ্ছে এটা সবচাইতে ভালো আমার কাছে" [being able to hear Quran recitation without the net is the best part for me] (Muslim Pro, 2024-06-13) (Play: Muslim Pro).

And they complain when offline mode fails:

- "অফ লাইন লিখে রাখছেন অথচ অফলাইনে পড়া যাচ্ছে না" [you say offline, yet it can't be read offline] (Islami Jindegi, 2022-05-29, 1★) (Play: Islami Jindegi).

No evidence was found that *website* visitors expect offline use. A PWA would be an untested bet.

Simple UI and older users (Moderate). Several reviews ask for larger, easier text for older readers:

- "ফন্ট অনেক ছোট যাদের চোখে সমস্যা তাদের পড়তে অনেক কষ্ট হয়... ফন্ট বড় করে পড়া যায় এরকম একটি বাটন" [the font is very small; people with eye problems struggle; please add a button to enlarge it] (Muslims Day, 2025-12-15) (Play: Muslims Day).
- "বাংলা অনুবাদে ব্যবহৃত বর্নের ফন্ট এক ধাপ বড় হলে বয়স্ক পাঠকের জন্য অধিকতর সুবিধা হত" [a one-step-larger Bangla translation font would help elderly readers] (PG Apps BD, 2026-03-28) (Play: PG Apps BD).

Others resist added complexity:

- "new version... before you can turn off alarm but now its too complicated, old version was good" (Muslim Bangla, 2026-07-23, 1★).
- "Please don't make location to GPS only" (Islami Jindegi, 2023-09-13, 5★, **146 helpful votes**).

(Play: Muslim Bangla; Play: Islami Jindegi). No data was found on older users' *web* behaviour.

Font size, not font rendering (Moderate / Not evidenced). Of 76 font-related reviews, almost all concern **size or typeface**. Examples: "Arabic fonts... in my 10 inch tab they look very tiny" (kutblog, 150 helpful votes); praise for the Kalpurush typeface; a request for the Uthmani Madani Arabic font (Play: Islami Jindegi; Play: Bangla Hadith). **No review from 2017 to 2026 complained of broken Bangla conjuncts (যুক্তাক্ষর) or Bijoy-encoded garbling.** Secondary guides describe Bijoy as a legacy ASCII-mapped encoding that garbles without its font (bangladatetoday; unicodefyi). That makes it a back-end data-cleaning task, not a user need.

Family context (Weak for shared phones; Moderate for family-event content). Two reviews mention parents' phones: "Even I had installed this on my mom's phone" (IRD Al Hadith) and "আব্বুর ফোনে কুরআন, দোয়া, মাসাআলা... পাঠ করতাম" [I used to read Quran, duas and masa'il on my father's phone] (Islami Jindegi) (Play: IRD Al Hadith; Play: Islami Jindegi). Family *life events* are better measured. **ইসলামিক নাম ("Islamic names") runs at 0.52× the prayer-time anchor**, **মেয়েদের ইসলামিক নাম ("Islamic names for girls") at 19K/month** (Ahrefs), and **আকিকা ("aqiqah") at 0.076×**, peaking just before Eid-ul-Adha (Ahrefs hadithbd.com; Google Trends BD).

Women users (Weak). The access gap is documented: **mobile internet adoption is 40% among men and 24% among women** (GSMA 2024; a later figure gives 26%) (Dhaka Tribune; GSMA). Women's voices in the corpus are faint: about 61 keyword matches, many of them false positives. Those found concern indecent ads, the women's prayer method and translation wording. One example: "মহিলাদের নামাজের পদ্ধতিতে একটি অংশের সঠিক পদ্ধতি বর্ণনা করা হয়নি... মহিলাদের সিজদার ব্যাপারটা পরিষ্কার করা হয়নি।" [part of the women's prayer method isn't described correctly; the women's sajdah isn't made clear] (Deen, 2026-03-12, 1★) (Play: Deen). Search shows women's fiqh demand exists, for example মহিলাদের নামাজের নিয়ম ("women's prayer method") and হায়েজ অবস্থায় কুরআন পড়ার বিধান ("ruling on reading the Quran during menstruation"). Those results pages are dominated by Facebook posts and rival-school answers (SERP মহিলাদের নামাজের নিয়ম). **No review asked for a menstruation tracker or a "not praying" mode.**

Assumed needs the evidence did not support

Several requirements that are often assumed for a Bangladeshi Islamic product **were not supported** by this research. Planners should not treat them as validated:

- **Bijoy/Unicode font rendering** as a user-facing problem: no complaints from 2017 to 2026. Font *size* is the real issue.
- **Accounts and login**: only 51 of 11,671 reviews mention them, mostly about lost subscriptions on global apps. Users complain when login gets in the way; we found none asking for it. One Deen reviewer complained that donating "asked for too more information" (Play: Deen).
- **Authenticity checking as a traffic driver**: জাল হাদিস ("fake hadith") draws <100 searches/month. Sourcing matters for trust, not acquisition.
- **A madhhab picker that users welcome**: some users explicitly reject being asked.
- **Women-specific features** such as period tracking or prayer pauses: not requested anywhere in the corpus. Women's fiqh *content* demand is observed in search.
- **Daily hadith/ayah push as a return driver**: not directly evidenced in Bangla reviews.
- **Tasbih as a daily driver**: weak. Only 47 reviews mention it, mostly asking for custom dhikr. "tasbih counter online" is <100/month in Ahrefs, though no Bangla tool ranks.
- **"Ad-free" as a differentiator against dedicated Islamic websites**: it is already table stakes there (report 05).
- **Desktop-first users**: StatCounter's 56% desktop reading conflicts with BTRC's ~89% mobile subscriptions (report 01).
- **Azan alarms on the web**: the strongest app complaint is alarm failure. Examples: "Android 13 the full Azan doesn't play, only a beep" (Muslim Bangla, 110 helpful votes); "আমার ফযর এর নামাজ কাযা হয়ে গেলো" [my Fajr became qaza] (Amader Lab, 2019) (Play: Muslim Bangla; Play: Amader Lab). A website cannot reliably ring an azan, so this need does not transfer. It is a reason not to promise alarms.

Conclusion

The needs with Strong evidence share one feature: each is a **correctness obligation**, not a convenience. The obligations are the IF-matched minute, the Bangladesh-sighted date, the verse-accurate pronunciation, the named source, and the absence of an indecent ad beside a surah. Users judge failures on these religiously ("ruins people's fasts", "selling religion", "is it for Shias?"), and one visible error costs more trust than a missing feature. The requirements that are often assumed but weakly evidenced are women-specific tooling, accounts, offline web use and colloquial Bangla. They should be validated with web users before they shape the roadmap. Unlike the app corpus here, that validation would need an interview or survey sample of Bangladeshi web users, women included.

Confidence & limitations

- **App-review bias:** nearly all user voice comes from Play reviews of apps. Website-only users, iOS users and people who never review are absent. Reviewer location cannot be verified; Bangla-script reviews are our best proxy.
- **Theme counts are keyword matches** on a non-random sample (newest and most relevant). Treat them as directional.
- **Not accessible:** Reddit (blocked to tools), Facebook groups and YouTube comments (not publicly retrievable). No Techtunes, Somewhereinblog or Quora threads surfaced.
- **Unverified facts that matter:** IF's calculation method and district policy (the ±9-minute conflict); the 25 February 2026 divisional iftar times (from a search summary); the 24% vs 26% female adoption figure.
- **No data:** retention or daily-active-user figures for any Bangladeshi Islamic product; Arabic-literacy rates; device RAM distribution; older users' web behaviour. See methodology.

CHAPTER 7

Trust, Bangla search and BD dates

ABOUT THIS CHAPTER

In plain words. This chapter puts the previous chapters together. For each user problem it shows what exists today, what is missing, what the opportunity is, and the evidence, then scores every opportunity on five criteria.

Key takeaway. The biggest gaps are not missing topics, they are **trust, local fit and Bangla-language handling**. The top-scoring opportunities are Bangla-aware search, Bangla-script pronunciation pages, an occasion engine (pages for every Islamic occasion with Bangladesh dates), graded topic hadith, a Bangladesh moon-sighting Hijri date, and fact-checks of viral claims.

How the score works. Each opportunity gets 1 to 5 points for Demand, Severity of the problem, Competitive gap and Long-term value, plus points for being simpler to build (6 minus Complexity). The total is out of 25. These scores are the analyst's judgement based on the cited evidence, not a formula from data.

Why it matters for the product. It is the bridge between research and decisions. Chapter 09 re-checks and re-orders this list into the final priorities.

Research date: 5 November 2026. This report turns the demand evidence in 03-bangladesh-keyword-research.md and the user evidence in 04-user-search-intent-and-behavior.md into a ranked list of content and feature gaps. For each gap it shows what exists today, what is missing, and how much demand sits behind it. Existing solutions are summarised from the site audit in 05-competitor-feature-analysis.md and 02-top-islamic-websites-bangladesh.md. Bangladesh-specific requirements are detailed in 06-bangladesh-specific-user-needs.md, and timing in 08-seasonal-search-trends.md. Row-level keyword data: data/keyword-database.csv.

Key findings

- **The largest gaps are about trust and local fit, not missing topics.** Bangladeshi users can already find almost every topic somewhere. What they rarely find is search that understands how they spell, Bangla-script pronunciation, a cited grade on every hadith and dua, dates that follow Bangladesh's moon sighting, and answers labelled by madhhab.
- **Bangla-aware search ranks first.** quran.com's search API returns 0 results for the everyday word "নামাজ" (it indexes "সালাত"). Only hadithbd handles Banglish ("namaj"), and none of the BD sites tested corrects a typo such as "নামজ". The demand is spread across spelling variants that differ by 6–300x.
- **Topic hadith is the clearest content gap.** Queries such as "মা নিয়ে হাদিস" (hadith about mothers) and short-hadith lists draw >1,000 searches a month in Ahrefs' estimate, yet caption and quote sites win them with no Arabic text, no grading and heavy ad scripts.
- **Bangladesh-specific utilities are weak or absent.** No site audited cites the BD National Moon Sighting Committee for its Hijri date, even though Bangladesh celebrated both Eids of 2026 a day after Saudi Arabia. Only one prayer-time site shows both Hanafi and Shafi'i Asr times. Zakat and faraid calculators that rank are mostly foreign, charity-run or thin.
- **Fact-checking viral claims is unclaimed.** Queries for "৮০ বছরের গুনাহ মাফের দোয়া" (a dua that forgives 80 years of sins) and "জুমার নামাজ ২২ রাকাত" (22 rakat of Jumu'ah) show people looking up popular claims, and no site addresses them. Search volume is small, but credibility value is high.
- **Some apparent gaps are thin.** A Bangla tasbih counter has no Bangla competitor, but measured demand is tiny (Ahrefs >100, KD Hard; Trends 0.003x). Hifz tools and licensed book PDFs matter to a niche. They rank low on demand and high on complexity.

How the opportunities were scored

Each opportunity gets five 1–5 scores. **Demand** comes from Ahrefs buckets and Trends ratios where they exist, and from observed queries otherwise: 5 means a head term at or above 0.10x the prayer-time anchor or many >10,000 items, and 1 means below 0.01x or Ahrefs <100. **Severity** is how badly the current results fail the user, judged from SERP observations and reviews: 5 means misinformation, harm or broken worship. **Competitive gap** is how far existing BD sites are from meeting the need: 5 means nobody does it. **Implementation complexity** runs from 1 (easy) to 5 (hard), counting editorial, scholarly and data effort as well as engineering. **Long-term value** is the contribution to trust, retention and defensibility. The priority score is **Demand + Severity + Competitive gap + Long-term value + (6 −**

Complexity), out of 25. Ties are broken by Demand, then Long-term value. **All scores are analyst judgements based on the cited evidence, not measurements.** Another analyst weighting, for example, demand double, would reorder the middle of the list. The top five are robust to reasonable re-weighting.

Opportunity matrix, ranked

D = Demand, S = Severity, G = Competitive gap, C = Implementation complexity (5 = hardest), V = Long-term value, P = priority score.

#	User problem	Existing solutions	Current gap	Potential opportunity	Evidence	D	S	G	C	V	P
1	"I typed it the way I spell it and found nothing"	hadithbd maps Banglish "namaj" to নামায/নামাজ/সালাত; islamqa autocorrects via Google search; quran.com, alkawsar and sunnah.com use exact match	quran.com API returns 0 for "নামাজ"; hadithbd returns 1 irrelevant hit for "নামজ"; alkawsar returns nothing for "নামজ"; sunnah.com has no Bangla results	Search that normalises Unicode and handles synonyms (নামাজ/নামায/সালাত), Banglish and typos, across every content type	quran.com API; hadithbd namaj; hadithbd নামজ; alkawsar নামজ; spelling ratios in 03	5	4	4	3	5	21
2	"I can't read Arabic; I need to say it correctly"	muslimbangla shows Bangla উচ্চারণ per verse; quran.com offers Latin transliteration only; several apps offer it in-app	Bangla-script pronunciation is rare on the web and error-prone where it exists; users report transliteration errors verse by verse	Proofread Bangla উচ্চারণ for every surah, ayah and dua, paired with audio and framed as a learning aid	muslimbangla sura 1; quran.com API 1:2; আয়াতুল কুরসি বাংলা উচ্চারণ >10,000 (Ahrefs); Play: kutblog	5	3	4	3	5	20
3	"When is Shab-e-Barat / Ramadan / Eid in Bangladesh, and what do I do?"	News portals publish dated articles; calendar sites post estimates; ihadis has district Ramadan calendars	No single page per occasion that moves from countdown to how-to to next year's BD date; users append "বাংলাদেশ" because Saudi dates differ	An occasion engine: about 10 occasion pages, each with a BD-specific date, countdown, rules/niyat/dua, and next year's date	Autocomplete শবে বরাত; Jugantor; Ramadan week 1 about 40x off-season (Trends T1)	5	3	3	2	5	20
4	"I need a hadith about my mother / rizq / patience to share"	Caption and quote sites rank (caption.com.bd, bd24live, islamiccaption); hadithbd and ihadis serve collection browsing, not topics	Top results have 0 Arabic characters, no grading, 1 reference and 28–44 ad-script references	Topic-hadith hubs with Arabic, Bangla, named grade and grader, book and number, and a share card that keeps the reference	Bing মা নিয়ে হাদিস; Bing রিজিক নিয়ে হাদিস; ছোট হাদিস >1,000 (Ahrefs হাদিস)	4	4	4	2	4	20
5	"The Arabic date in my app is wrong"	ihadis, muslimbangla and salat.habibur show a BD date (one day behind islamqa's Saudi date); IF's site shows no Hijri calendar	**No site cites the BD Moon Sighting Committee**; users complain the date ignores moon sighting and does not roll over at Maghrib	A Hijri date that follows the National Moon Sighting Committee, rolls over at Maghrib, cites its source and can be corrected by ±1 day within hours	ihadis; islamqa; BD Eid a day after Saudi (Daily Star); Play: Islami Jindegi	3	4	5	2	4	20
6	"Is this viral dua / claim real?"	Nothing dedicated; জাল হাদিস (fabricated hadith) SERPs are YouTube, Facebook and news; Rumor Scanner covers general misinformation	Nobody checks popular religious claims such as "৮০ বছরের গুনাহ মাফের দোয়া", "জুমার নামাজ ২২ রাকাত", "৪১ জন সাহাবী", "ইমাম মাহদীর আগমন ২০২৮"	A myth-check section: claim, verdict, grading, source, scholar reviewer; linked from the related dua, hadith and occasion pages	Trends গুনাহ related; Bing জাল হাদিস চেনার উপায়; UNB, JU study	2	5	5	3	5	20
7	"Which dua for my situation, and is it authentic?"	hadithbd carries Hisnul Muslim (267 duas, sourced); muslimbangla has 40 categories with **no source references**; news portals and blogs rank without grading	Popular dua pages lack sources and grades; users type scholar names into queries to find trustworthy versions	Need-based dua finder ("I am in debt", "I can't sleep") with graded masnoon duas, audio, how many times and when	muslimbangla dua; hadithbd dua; Bing দুশ্চিন্তা দূর করার দোয়া; দোয়া 2.5x anchor-median (Trends T9)	5	3	3	2	4	19
8	"I saw a snake / fish / a dead person in my dream. What does it mean?"	Facebook posts, Swadesh Pratidin, YouTube, Anandabazar Patrika (Kolkata), Quora	No BD Islamic source frames dream meanings carefully or cites where interpretations come from; loose "Ibn Sirin" attributions	Dream-interpretation pages with sourced classical views, clear limits on interpretation, and links to the relevant duas	স্বপ্নে 1.32x, rising (Trends স্বপ্নে related); Google স্বপ্নে সাপ দেখলে কি হয়	5	4	4	3	3	19
9	"This verse / hadith text has a mistake"	Every major Bangla Quran and hadith app; reviews report errors in Yasin, Mulk 17, Rahman 39, Fatir 35:8 and 35:11, and Sahih Muslim numbering	Errors are reported in reviews and often go unanswered; no public corrections log was observed on the sites audited	Proofread text with a visible report-an-error link on every verse and hadith, a public response, and a dated corrections log ("সংশোধন")	Play: PG Apps BD; Play: Technobd; Play: IRD Al Hadith; 86 spelling/translation-error reviews, 37 rated ≤3★ (own count)	3	5	3	3	5	19
10	"What time is Asr in my upazila, by Islamic Foundation timing?"	muslimbangla (#1 for নামাজের সময়সূচি; claims all districts and upazilas, picker not seen); salat.habibur (64 districts, both Asr times, Qibla); ihadis (Karachi method, Asr 2:54 PM = non-Hanafi)	Only salat.habibur shows both Asr times; ihadis defaults to the non-Hanafi Asr; upazila lists are unverified or missing; IF's own site publishes no usable times	IF-matched district timetable by default, optional upazila list, manual location, both Asr times labelled by method ("প্রথম ছায়া / দ্বিতীয় ছায়া", first or second shadow), source shown	salat.habibur; ihadis; muslimbangla; IF; Play: Ibadah	5	3	2	3	5	18
11	"Is this jayez? Who says so, and by which school?"	muslimbangla (mufti-answered masail, IDs above 170,000); alkawsar (numbered Q&A); islamqa (single Saudi Salafi source); at-Tahreek, al-Itisam, Ahle Haq Media; Facebook	Results show Hanafi and Ahl-e-Hadith answers side by side with **no madhhab labels**; users add scholar names to queries to filter	Template-based answer pages (ruling, evidence, madhhab differences labelled, named reviewer, date), organised around the seven query templates	muslimbangla masails; alkawsar Q&A; Google রাগের মাথায় তালাক; জায়েজ 0.30x (Trends)	4	4	4	5	5	18
12	"A good Islamic name with its real meaning" / "an Islamic caption I can post"	Names: HadithBD (3,086 names), Facebook story pages, FirstCry (India). Captions: Pinterest, Medium, captionsbangla, BongQuotes	Names come without verified meanings or origin; **no caption site cites the hadith or ayah it quotes**	Name pages with meaning, origin and how the meaning was verified; a caption and quote library where each quote carries its reference	ইসলামিক নাম 0.52x; ইসলামিক ক্যাপশন 0.13x (Trends 12-m); Google islamic caption bangla; Google মেয়েদের ইসলামিক নাম অর্থসহ; hadithbd home	4	3	4	2	3	18

Scoring rationale

#	Opportunity	Rationale for the scores
1	Bangla-aware search	D5: affects every query; spelling variants differ 6–300x. S4: zero or irrelevant results on core words. G4: only hadithbd handles Banglish, nobody handles typos. C3: needs a Bangla phonetic and synonym layer. V5: compounds across all content.
2	Bangla উচ্চারণ	D5: আয়াতুল কুরসি বাংলা উচ্চারণ >10,000; "বাংলা উচ্চারণ" 1.12x and rising. S3: available in places, but error-prone. G4: one web competitor. C3: proofreading cost for every verse and dua. V5: core to the audience.
3	Occasion engine	D5: Ramadan week 1 about 40x off-season; Shab-e-Barat 6.3x anchor-median. S3: news pages answer, but scattered. G3: partial coverage exists. C2: about 10 templated pages per year. V5: an annual return cycle.
4	Topic hadith	D4: several >1,000 items, long tail of topics. S4: no Arabic, no grading. G4: incumbents target collections, not topics. C2: built on existing graded corpora. V4: shareable pages spread the brand.
5	BD Hijri date	D3: date queries carry "বাংলাদেশ"; 26 reviews mention the Hijri date. S4: a wrong date affects fasting and special nights. G5: absent everywhere. C2: manual update on each announcement. V4: a daily trust signal.
6	Fact-checking	D2: small (৮০ বছরের দোয়া related index 8; জাল হাদিস <100). S5: misinformation and scam risk. G5: nobody does it. C3: needs scholarly review. V5: defines credibility.
7	Sourced dua finder	D5: the largest year-round family. S3: duas exist but uncited. G3: hadithbd is sourced. C2: Hisnul Muslim-type corpus. V4: daily-use content.
8	Dream interpretation	D5: 1.32x and growing. S4: Kolkata press and Facebook answers. G4: no careful BD source. C3: sensitive editorial framing. V3: engagement value; contested scholarly weight.
9	Text accuracy and corrections	D3: indirect, affects all readers; 86 error reviews. S5: errors in Quran text are a serious breach. G3: everyone has some errors. C3: proofreading plus workflow. V5: a trust moat.
10	IF-matched times, both Asr	D5: the 1.0x anchor plus 1.06x Banglish. S3: 2–5 minute errors anger users. G2: strong incumbents exist. C3: IF schedules are not published on the IF site. V5: a daily habit.
11	Madhhab-labelled Q&A	D4: large long tail of ruling queries. S4: conflicting, unlabelled answers. G4: no labelling anywhere. C5: needs a scholar panel. V5: authority.
12	Names and captions with sources	D4: names 0.52x; captions 0.13x. S3: unsourced quotes. G4: blogs and foreign sites. C2: list content. V3: acquisition more than retention.
13	Women's fiqh, private	D3: Google underrepresents it; IslamQA reads are very high. S5: privacy and accuracy stakes. G4: Facebook-led. C4: reviewed answers plus anonymity. V4: loyalty.
14	Finance rulings	D3: many observed queries, no Trends value. S4: conflicting, money at stake. G4: no BD-context explainer. C4: scholarly and product research. V4: recurring questions.
15	Offline/PWA	D3: 175 offline/data reviews. S3: data cost and connectivity. G4: two real PWAs, neither BD-specific. C3: standard engineering. V4: retention on budget phones.
16	Provenance	D3: users request named translations. S3: missing on top BD sites. G3: quran.com does it well. C2: metadata. V4: trust.
17	Ruqyah safety	D1: 0.005x on Google. S5: documented scams and abuse. G3: brands exist. C2: a few reviewed pages. V3: protective value.
18	Audio-first surahs	D4: YouTube on most SERPs. S2: needs met by YouTube. G2: hard to beat YouTube. C3: licensing and hosting. V4: sleep and daily routines.
19	Zakat calculator	D3: যাকাত 0.16x, seasonal. S3: foreign tools rank. G3: muslimbangla's tool is good. C3: yearly nisab and price updates plus review. V3: annual.
20	Faraid calculator	D2: 0.004x. S4: wrong shares cause family harm. G4: thin tools. C4: complex fiqh plus BD law. V3: occasional.
21	Children's learning	D2: little Google demand as a phrase. S3: poor SERPs. G4: little Bangla content. C4: content production. V4: family loyalty.
22	Tasbih counter	D1: tiny measured demand. S2: users can count by hand or use a device. G5: no Bangla tool. C1: trivial. V2: minor.
23	Hifz tool	D2: observed only. S3: no ranking tool. G3: hadithbd has one. C4: audio and spaced-repetition logic. V4: deep engagement for a niche.
24	Licensed book PDFs	D2: 0.002x. S3: piracy. G3: archives and stores exist. C4: licensing. V3: library value.

Where the gaps cluster: trust, local fit and Bangla language

Read top to bottom, the ranking is less a list of features than **three structural gaps**. The first is **trust at the item level**: grading, sources, named translators, corrections and myth-checks (rows 4, 6, 7, 9, 12, 16). Bangladeshi users already show this need. They type "আল কাউসার" and "শায়খ আহমাদুল্লাহ" into queries, praise "সনদ সহীহ" (sahih chains) in reviews and report wrong words verse by verse (Play: IRD Dua). Yet the audit found that the two most-used BD sites, muslimbangla and ihadis, do not name translators or graders, and muslimbangla's duas carry no references (05; muslimbangla dua). Closing this gap is mostly editorial work and metadata, which is why its complexity scores are low.

The second gap is **Bangladesh-specific correctness**: moon-sighting Hijri dates, IF-matched district and upazila times, both Asr times, BD-unit zakat and BD-law faraid (rows 3, 5, 10, 19, 20). The government sources are effectively absent as products. The Islamic Foundation portal has no prayer times or Hijri calendar, and quran.gov.bd still serves verse images built in 2012 (IF; quran.gov.bd). That leaves third parties to claim "Islamic Foundation timing" with no way to check it. One conflict here needs resolving before building. A 2026 Ittefaq report says other districts derive times by adding or subtracting up to 9 minutes from Dhaka (Ittefaq). A Jugantor snippet quotes the IF calling that method "ভুল ও ভিত্তিহীন" (wrong and baseless), because the IF now publishes a schedule for every district (Jugantor). The IF's actual method could not be verified.

The third gap is **Bangla as users actually type it**: search, pronunciation and spelling-tolerant matching (rows 1, 2). This is the hardest to copy, because it compounds. Every new page becomes reachable by more spellings. It is also the only gap that improves every other row.

Two low-ranked items deserve a note. The **tasbih counter** looks like an open field, since no Bangla tool ranks, but Ahrefs rates "tasbih counter" KD Hard at only >100 searches, and most counter queries are for buying a device (Ahrefs tasbih counter). It is worth building only as a cheap attachment to zikir pages, not as a destination. **Hifz** shows a conflict between two of our observations. The site audit found a hifz tracker on hadithbd, but the Bing results for "কুরআন হিফজ করার সহজ উপায়" (an easy way to memorise the Quran) show only articles and videos (hadithbd; Bing). The tool exists, but it is not discoverable through search.

What is deliberately not a gap

Ad-free pages are table stakes among dedicated Islamic sites, not a differentiator. No ads were seen on hadithbd, ihadis, muslimbangla, quran.com, islamqa or alkawsar. Ads appeared only on newspaper religion sections such as Jugantor and Prothom Alo (Jugantor; Prothom Alo). Ads still matter as a **leave-reason**: they are the largest complaint theme in the review corpus, with 551 matches (Play: Muslim Pro). The implication is that going ad-free avoids a penalty but earns no advantage against the serious Bangla sites. Likewise, **library-style hadith browsing** (Bukhari and Muslim by number) is well served by hadithbd and ihadis, and Google demand for it is small (Bing সহিহ বুখারী বাংলা). Building a better hadith library is not where the gap is. Attaching grades and references to topic pages that link into a library is.

Confidence and limitations

The **gap observations** (who ranks, what features exist) are moderately reliable. They come from single-day snapshots: 6 Google SERPs before a CAPTCHA, 34 Google SERPs in a signed-in browser, 16 Bing SERPs, and site visits through curl and a headless browser from outside Bangladesh. "Not found" in the audit means not seen in the navigation or on the pages examined, not proven absent (05). Native apps were not audited, and some features may live only there. The **demand scores** inherit the limits in 03. There are no absolute volumes outside Quran, hadith and dua, Trends is relative and exact-phrase only, and autocomplete is not volume. The **severity, gap, complexity and value scores are analyst judgement**. They are reasoned from the evidence cited but not measured, and the priority formula weights the five dimensions equally by choice. No page-by-page accuracy grading was done. "Poor result" judgements rest on automated checks (Arabic character counts, ad-script references, reference counts) and on the type of domain ranking. Facebook, YouTube and TikTok, where captions, women's questions and ruqyah demand concentrate, were not measured. Complexity estimates leave out licensing negotiations for translations, tafsir and audio, which could dominate the real cost; see 01 for market context. See 10-research-methodology-and-sources.md.

CHAPTER 8

Ramadan spikes, prayer times never stop

ABOUT THIS CHAPTER

In plain words. Islamic search in Bangladesh follows a calendar. This chapter uses five years of Google Trends data for Bangladesh to show how demand rises before, during and after each occasion: Ramadan, Shab-e-Barat, Shab-e-Qadr, both Eids, Hajj, Ashura, Shab-e-Meraj, Milad-un-Nabi, Bishwa Ijtema, and every Friday.

Key takeaway. The first week of Ramadan is the biggest wave of the year (রমজান searches reach about 40 times their off-season level). Shab-e-Barat is the biggest single night, about level with Ramadan week 1 per term, and pushes prayer-time searches to their yearly high. Every Friday, searches for জুমার নামাজ (Jumu'ah prayer) and সূরা কাহাফ (Surah Kahf) jump many times over. Meanwhile prayer times, duas, hadith, Quran and baby names never switch off.

Why it matters for the product. A site that only catches Ramadan traffic will be empty eleven months a year. The chapter shows how to combine a **daily habit** (prayer times, duas), a **weekly habit** (Friday) and an **annual calendar** (occasions). It also gives the 2026 verified dates and 2027 estimated dates, and points out that pages must be live and indexed by about **mid-December 2026** to catch the early-2027 season.

Watch out for. All magnitudes are relative Trends ratios, not counts. 2027 dates are estimates until Bangladesh's Moon Sighting Committee announces them.

Research date: 5 November 2026. This report maps how Islamic search demand in Bangladesh moves across the Islamic and Gregorian year, the week and the day. It gives 2026 dates verified for Bangladesh and 2027 planning dates, and it sets out what the timing implies for serving users all year round. Query-level detail is in 03-bangladesh-keyword-research.md, user journeys in 04-user-search-intent-and-behavior.md, the related gaps (occasion engine, BD Hijri date) in 07-content-and-feature-gaps.md, and Bangladesh-specific requirements in 06-bangladesh-specific-user-needs.md. Methods are in 10-research-methodology-and-sources.md, and row-level data in data/keyword-database.csv.

Key findings

- **Ramadan week 1 is the year's biggest wave.** "রমজান" (Ramadan) runs about **40x its off-season level** in the week Ramadan starts (82 vs about 2 in 2026). More than ten Ramadan terms spike together for four weeks, then collapse within a week of Eid. Demand is front-loaded: the first week is always the peak.
- **Shab-e-Barat is the biggest one-night occasion, not the biggest event of the year.** Per term, its peak (6.3x the prayer-time median week) is level with Ramadan week-1 terms (6.1–7.1x) and well below "ঈদ" (16.7x) or "দোয়া" (11.1x) at their peaks. Separately, prayer-time searches hit their yearly high in Shab-e-Barat week in 2022, 2023 and 2026. This corrects earlier research (Nov 4 2026), which called Shab-e-Barat "the single biggest religious spike of the year".
- **Every other occasion is a sharp one-week spike from near zero.** Measured peaks against the prayer-time median week are Shab-e-Meraj 3.1x, Eid-e-Milad-un-Nabi 1.6x, Laylatul Qadr 1.5x, Eid-ul-Adha 1.5x, Hajj (Latin) 1.4x, Ashura 1.05x, and Bishwa Ijtema, Qurbani and Arafah about 0.8x. Most seasonal terms are zero in 65–91% of weeks. Searches start only 1–3 weeks before the event and vanish the week after.
- **The weekly cycle is as strong as the annual one for Friday content.** On Fridays "জুমার নামাজ" (Jumu'ah prayer) runs about 40–60x and "সূরা কাহাফ" (Surah Kahf) about 25–45x their other-weekday levels. Prayer-time searches rise 8–20% on Fridays.
- **A small set of needs never switches off.** Prayer times, dua, Quran, hadith, Islamic names and umrah are searched in every week of five years, with peaks only 1.8–2.8x their median (dua 5.1x). Dua alone averages 2.5x the prayer-time median.
- **Site traffic moves far less than keywords.** Ahrefs' traffic estimates for hadithbd.com and muslimbangla.com show a Ramadan-month high of about **1.2–1.9x** the previous month, against 5–40x for individual Ramadan keywords. Most of their traffic is year-round.
- **People plan months ahead and want Bangladesh's date.** On 5 Nov 2026, autocomplete already offered 2027 dates for Ramadan, Shab-e-Barat, Eid, Hajj and Ijtema, usually with "বাংলাদেশ" appended. In 2027, Ijtema, Shab-e-Meraj, Shab-e-Barat and the start of Ramadan all fall between early January and mid-February.

How to read the magnitudes

All magnitudes come from Google Trends for Bangladesh, pulled live on 5 Nov 2026 through the Trends widget API: 5-year weekly data (31 Oct 2021 – 7 Nov 2026) and 90 days of daily data. Every request included the anchor **"নামাজের সময়" (prayer time)**. Each term is expressed as a multiple of the anchor's 5-year **median week** ("x anchor-median"), so terms from different requests can be compared (Trends T2). These are **relative indices, not search counts**. Trends rounds to integers, so terms with values under about 5 are imprecise. It matches exact phrases, so spelling matters: "সূরা কাহাফ" is about 40x "সূরা কাহফ" on Fridays. "ঈদ" is a broad term that includes holidays, films and entertainment. Weekly buckets run Sunday to Saturday. **[Measured]** marks Trends and Ahrefs figures. **[Observed]** marks autocomplete snapshots taken on 5 Nov 2026, which show what people type, not how much. **[Inferred]** marks the analyst's interpretation.

The annual calendar: one wave, many spikes

Occasion	2026 date in BD (verified)	2027 date in BD	Peak week, x anchor-median [Measured]	Weeks above 0	Ramp and decay [Measured]
Shab-e-Meraj	Night of Fri 16 Jan 2026 (Ittefaq; Desh Rupantor)	**Estimate:** night of about 5–6 Jan (analyst calculation from 27 Rajab 1448; no source)	3.1	14%	Single-week spike; yearly peaks 36/50/36/23/23 (2022–26), about half of Shab-e-Barat's
Bishwa Ijtema	Not held at Tongi before the 13th national election (Ittefaq)	**Official:** 8–10 and 15–17 Jan (Dhaka Times)	0.8	19%	Peaks 30/23/12 (2023–25); 5 in late Dec 2025, then 0 in 2026
Shab-e-Barat	Holiday 4 Feb, night of 3 Feb (Daily Star Bangla)	**Estimate:** 24 Jan holiday, night of 23 Jan (Bangla Date Today)	6.3	26%	2026: 6 → 7 → 24 → **77** → 1
Ramadan (রমজান, সেহরি, ইফতার)	First fast Thu 19 Feb (Ittefaq English; from a search summary)	**Estimate:** about 9–10 Feb (counted back from Eid); earlier research (Nov 4 2026) cited Wego's projection of about 8 Feb (Wego)	রমজান 6.1; সেহরির সময় 7.1; রোজা 7.1; সেহরি 5.1; ইফতার 4.9; ramadan calendar 5.1	29–98%	রমজান 2026: **82** → 28 → 23 → 25 → 20 → 2
Zakat and fitra	Ramadan weeks	Ramadan weeks	যাকাত 1.1; ফিতরা 1.3	96% / 16%	যাকাত peaks in weeks 1–3 (15/14/14); ফিতরা climbs to the last 10 days (1 → 17 → 27 → 42 → 44 → 3)
Laylatul Qadr	Holiday 17 Mar, night of 16 Mar (Daily Star Bangla)	**Estimate:** 7 Mar holiday, night of 6 Mar (Bangla Date Today)	শবে কদর 1.5; লাইলাতুল কদর 1.2	9% / 6%	Builds through the last ten nights (2026: 1 → 7 → 17 → 0)
Eid-ul-Fitr	Sat 21 Mar; Saudi Arabia Fri 20 Mar (Daily Star; bdnews24)	**Estimate:** 10 or 11 Mar (Bangla Date Today)	ঈদ (broad) 16.7; ঈদুল ফিতর 3.0; ঈদের নামাজের নিয়ম 0.8	94% / 14% / 8%	"ঈদ" 2026 peak 85; Eid-ul-Adha weeks only about half the Eid-ul-Fitr level
Hajj	Flights and Hajj in May 2026	**Official roadmap:** flights from 8 Apr; Hajj (9 Zilhajj) about 15 May (Bangla Tribune)	hajj (Latin) 1.4; হজ 0.4; registration and package terms 0.03–0.08	100% / 99%	Peaks in the Hajj/Eid-ul-Adha week; a smaller April bump in 2026 (13–14)
Eid-ul-Adha and Qurbani	Thu 28 May; Saudi Arabia 27 May (Ittefaq English; BSS)	**Estimate:** 17 May (Bangla Date Today); analyst range 16–17 May	ঈদুল আজহা 1.5; কুরবানি 0.8; আরাফার দিন 0.8; গরুর হাট (cattle market) 0.4	17% / 35% / 3% / 36%	কুরবানি 2026: 4 → 6 → 10 → 17 → **29** → 3 (a 4-week build)
Ashura (Muharram)	Fri 26 Jun (Dhaka Tribune)	**Estimate:** 16 Jun (Bangla Date Today)	আশুরা 1.05; মহররম 0.35	12% / 11%	2026: 1 → 7 → 16 → 1
Eid-e-Milad-un-Nabi	Wed 26 Aug (Dhaka Tribune)	**Estimate:** 15 Aug (Bangla Date Today); analyst range 15–16 Aug	1.6	20%	2026: 3 → 5 → 14 → **55** → 3; consistently large since 2023

Trends sources: (T1; T2; T3; T4; T5; T7; T8; T10).

The 2026 dates check out against the data. **Every verified 2026 date falls inside the Trends peak week for its term**: Meraj 11–17 Jan, Barat 1–7 Feb, Ramadan 15–21 Feb, Qadr and Eid-ul-Fitr 15–21 Mar, Qurbani 24–30 May, Ashura 21–27 Jun, Milad 23–29 Aug. Bangladesh celebrated **both Eids of 2026 one day after Saudi Arabia**, and bdnews24 describes this as the traditional pattern (bdnews24). The 2026 Ramadan start date comes from a search-result summary that was not opened. It is consistent with the Trends week-1 peak.

2027 dates are planning estimates (±1 day, subject to moon sighting), except two. Ijtema (8–10 and 15–17 Jan, announced by the Home Minister on 3 Sep 2026) and the Hajj roadmap (Ministry of Religious Affairs, published 7 Jun 2026) are official. No official 2027 holiday list had been found by 5 Nov 2026. The 2026 list was published on 10 Nov 2025, so the 2027 list may be imminent (Daily Star Bangla). The 2027 Ramadan start is the date most in doubt. The seasonal researcher counts back to about 9–10 Feb from a 10–11 Mar Eid, while the earlier market research cited Wego's projection of about 8 Feb. Both are estimates. Content should be ready a week before the earlier one.

Before, during and after: the same three-phase journey every time

Autocomplete on 5 Nov 2026 shows the same query shape for almost every occasion: **"[occasion] [year] কবে / কত তারিখে (বাংলাদেশ)"** (when / what date, in Bangladesh), then **countdowns** ("আর কতদিন বাকি", how many days left), then **how-to rituals** (niyat, rakat, rules, dua, amal, fazilat). [Observed]

Occasion	Before (dates, countdowns)	During (how-to)	After
Shab-e-Barat	শবে বরাত ২০২৭ কত তারিখে বাংলাদেশ; শবে বরাতের আর কতদিন বাকি আছে	শবে বরাতের নামাজের নিয়ম / নিয়ত / কত রাকাত; আমল; ফজিলত সম্পর্কে হাদিস (Ahrefs >1,000); শবে বরাতের রোজা কয়টি (how many fasts)	Next year's date
Shab-e-Meraj	শবে মেরাজ ২০২৭ কত তারিখে বাংলাদেশ	ঘটনা ও ইতিহাস (the event and its history)	—
Ramadan	রমজান ২০২৭ কত তারিখে; "রমজান মাসের আর কতদিন বাকি আছে"; ramadan calendar 2027 bangladesh; ramadan 2027 countdown	সেহরির শেষ সময় আজকের ঢাকা / চট্টগ্রাম / সিলেট; ইফতারের সময়; রোজার নিয়ত; তারাবির নামাজ কত রাকাত / দোয়া / "সুন্নত নাকি নফল"; রোজা অবস্থায় চোখে ড্রপ (eye drops while fasting)	রোজার ঈদ কত তারিখে (date of Eid)
Laylatul Qadr	শবে কদর ২০২৭; "২০২৬ কত তারিখে বাংলাদেশ"	শবে কদরের দোয়া; নামাজের নিয়ম / কত রাকাত; "allahumma innaka afuwwun" (Breakout)	—
Fitra and zakat	ফিতরা কত টাকা ২০২৬ ইসলামিক ফাউন্ডেশন	যাকাতের হিসাব; যাকাত ক্যালকুলেটর; যাকাত কাদের উপর ফরজ (who must pay); যাকাতের খাত (recipients)	—
Eid-ul-Fitr	ঈদ কবে ২০২৭ / কবে হতে পারে	ঈদের নামাজের নিয়ম / নিয়ত / কয় তাকবীর; "মাসবুক হলে করণীয়" (if you join late); "ফরজ না ওয়াজিব"	**"ঈদ কবে হয়েছে"** (when was Eid; looking back)
Hajj and Umrah	হজ্জ নিবন্ধন 2027 শেষ তারিখ; hajj package 2027 bangladesh price; ওমরাহ প্যাকেজ 2026 বাংলাদেশ মূল্য; ওমরাহ ভিসা ফি কত 2026	হজ্জের ফরজ/ওয়াজিব কয়টি; তালবিয়া বাংলা উচ্চারণ; ইহরাম বাধার নিয়ম	হজ নিবন্ধন সনদ ডাউনলোড (registration certificate)
Dhul Hijjah, Arafah, Qurbani	কুরবানির ঈদ ২০২৭ কবে / কত দিন বাকি; জিলহজ্জ মাসের ১০ তারিখ ইংরেজি কত তারিখ ২০২৬	জিলহজ্জ মাসের আমল; আরাফার দিনের দোয়া; কুরবানির গরুর বয়স কত হতে হবে (minimum cattle age); হাট; দাম (price); জবাই করার দোয়া	**"কুরবানির ঈদ কবে গেছে"** (when did Qurbani Eid pass)
Ashura and Muharram	আশুরার রোজা কবে ২০২৬; মহররমের ১০ তারিখ কবে ২০২৬	আশুরার রোজার ফজিলত; ঘটনা; মহররম কবিতা (a school poem)	—
Eid-e-Milad-un-Nabi	ঈদে মিলাদুন্নবী ২০২৬ কত তারিখ (ছুটি, holiday)	"পালন করা কি জায়েজ" (is observing it permissible); বক্তব্য / রচনা (speech, school essay)	—
Bishwa Ijtema	বিশ্ব ইজতেমা ২০২৭ কত তারিখে; ইজতেমার তারিখ ২০২৭	ইতিহাস; কোথায় হয় (where it is held); ইজতেমার মাঠ	—
Friday (weekly)	—	জুমার নামাজ কত রাকাত; নিয়ত; **প্রথম ও দ্বিতীয় খুতবা pdf / বাংলা উচ্চারণ** (first and second khutbah); জুমার দিনের আমল / দরুদ; জুমার দিনের **স্ট্যাটাস / ক্যাপশন**; সূরা কাহাফ প্রথম ১০ আয়াত	—

[Inferred] Three things follow. First, the word **"বাংলাদেশ" appended to date queries** is direct evidence that users know BD dates often fall a day after Saudi Arabia's, and that they want the Moon Sighting Committee's answer. Second, **"after" demand is almost nil**. The exceptions are Eid look-backs ("কবে হয়েছে", "কবে গেছে") and next year's date, so an occasion page should switch to the next occurrence the day after. Third, **school and civic demand rides on occasions**: the Muharram poem, Milad essays and speeches, holiday ("ছুটি") look-ups. Some Milad queries ask whether observing it is permissible, a sectarian question that content should handle neutrally.

Inside Ramadan: week 1 for times, the last ten days for fitra

Ramadan is the largest **cluster**: more than ten terms spike together and stay high for four weeks. In every year from 2022 to 2026 the peak was **the week Ramadan started** (27 Mar–2 Apr 2022; 19–25 Mar 2023; 10–16 Mar 2024; 23 Feb–1 Mar 2025; 15–21 Feb 2026) (Trends T1). [Measured] In 2026 "রমজান" scored **82 in week 1**, then 28, 23, 25 and 20, and fell to 2 within a week of Eid. Its off-season level (Sep–Nov 2026) is about 2, which gives the **roughly 40x** peak-to-off-season ratio. "সেহরির সময়" (sehri time) scored 66 in week 1 against 1–2 off-season. Its 5-year maximum, 100, came in 19–25 Mar 2023. "ইফতার" decays more slowly than "সেহরি" (2026: 68 → 41 → 33 → 29 → 22, against 58 → 17 → 11 → 10 → 6). [Inferred] Sehri searching drops quickly once the habit is set, while iftar searching continues through the month.

Within the month, needs arrive in sequence. Zakat peaks in weeks 1–3 (15/14/14 in 2026), fitra climbs through Ramadan to peak in the last ten days (1 → 17 → 27 → 42 → 44), and Laylatul Qadr peaks in the 27th-night week (Trends T5; Trends T7). [Measured] On the 12-month view, the week of 15–21 Feb 2026 was the peak for prayer and Ramadan utility terms. The week of 15–21 Mar 2026, which covered the last nights, Laylatul Qadr and Eid, was the peak for how-to and ruling terms such as নামাজের নিয়ম, জায়েজ, কাজা নামাজ and শবে কদর (Trends BD 12-m). These Trends findings agree with an older Financial Express report (2018) that Ramadan searches in Bangladesh peak in the first week and then fall (Financial Express).

Correcting the earlier claim about Shab-e-Barat

Earlier research (Nov 4 2026) concluded that "Shab-e-Barat week is the single biggest religious spike of the year, larger than Ramadan prayer-time peaks". It ranked the annual calendar as Shab-e-Barat → Ramadan week 1 → Laylatul Qadr → Eid-ul-Fitr → Dhul Hijjah/Arafah → Eid-ul-Adha → Ashura → Shab-e-Meraj (Trends BD). The 5 Nov pull, which used one anchor across ten requests, supports a **narrower** claim:

Earlier claim (Nov 4 2026)	What the Nov 5 data shows	Status
Shab-e-Barat is the single biggest spike of the year	Its peak (6.3x anchor-median) is **level with Ramadan week-1 terms** (রমজান 6.1x, সেহরির সময় 7.1x, রোজা 7.1x) and **below** "ঈদ" (16.7x) and "দোয়া" (11.1x) at their Ramadan peaks. Ramadan is the largest cluster: 10+ terms high for 4 weeks	**Corrected:** the biggest *one-night occasion*, not the biggest event
Shab-e-Barat beats Ramadan prayer-time peaks	**Confirmed.** A Shab-e-Barat week is about 2.3x the highest prayer-time week, and "নামাজের সময়" itself reached its **yearly maximum in Shab-e-Barat week** in 2022 (13–19 Mar), 2023 (5–11 Mar) and 2026 (1–7 Feb: 24 vs 12–14 in surrounding weeks). "সেহরির সময়" jumped to 16 that week in 2026, consistent with people fasting on 15 Sha'ban	Holds
Ordering puts Laylatul Qadr above Eid-ul-Fitr and Shab-e-Meraj last	Eid-ul-Fitr ("ঈদুল ফিতর" 3.0x; broad "ঈদ" 16.7x) is above Laylatul Qadr (1.5x); **Shab-e-Meraj (3.1x) is above Milad (1.6x), Qadr, Eid-ul-Adha (1.5x) and Ashura (1.05x)**	**Corrected ordering**

[Measured] Source: (Trends T2; Trends T9; Trends T10). [Inferred] Shab-e-Barat should be planned as a **reactivation moment** that comes two to three weeks before Ramadan. It brings lapsed users back to prayer times and hadith (the five-year peak for "হাদিস" fell in Shab-e-Barat week 2024), and it sets up the Ramadan acquisition wave. Its own content (amal, nafl prayer, virtue hadith) also carries the most authenticity disputes. The Shab-e-Barat hadith are debated in Bangladeshi media (earlier research cites Jugantor quoting al-Albani and an Inqilab piece arguing for collective support) (Jugantor; Inqilab). That makes graded, sourced content especially valuable there.

The weekly and daily cycles

Daily data for 5 Aug–5 Nov 2026 shows how strongly Friday drives some searches (Trends TD). [Measured]

Term	Friday average	Other weekdays	Friday lift
জুমার নামাজ (Jumu'ah prayer)	12.8	0.2–0.4	about 40–60x
সূরা কাহাফ (Surah Kahf)	13.2	0.3–0.6 (Thursday highest at 0.6)	about 25–45x
সূরা কাহফ (alternate spelling)	0.3	—	the কাহাফ spelling is used about 40x more
নামাজের সময় (prayer time)	84.4	70.2 (Sat) to 77.9 (Wed)	+8–20%
জুমার দিনের আমল (Friday amal)	0–0.7	—	Too small to resolve, but present in autocomplete

The earlier pull (Nov 4 2026) found smaller Friday multipliers: about 29x for সূরা কাহাফ, about 40x for জুমার নামাজ, +14% for prayer time and +12% for "দোয়া". The two pulls agree on direction and order of magnitude. The difference reflects the rounding of small daily values and different 90-day windows, so treat the range, not the point estimate, as reliable. The earlier pull also measured the **daily cycle**. Prayer-time searches peak at 04:00–06:00 BD time (index 62 at 04h, 81 at 05h), with a second peak at 15:00–17:00 (Asr to Maghrib). Dua peaks at 05:00–06:00, and dream interpretation at 05:00–08:00, right after waking (Trends hourly). Those hourly figures cover one November week with no Ramadan. Hourly sehri (02:00–04:00) and pre-iftar patterns were not measured.

Year-round demand: what never switches off

Term	Weeks above 0 (5 yrs)	Peak ÷ own median	5-yr mean, x anchor-median	Reading
দোয়া (dua)	100%	5.1	**2.50**	The largest year-round Islamic term measured
নামাজের সময় (prayer time)	100%	2.6–2.8	1.0 (anchor)	Daily utility; never zero
হাদিস (hadith)	100%	2.1	1.06	Peaks in Shab-e-Barat and Ramadan weeks (18–19 vs median 9)
ইসলামিক নাম (Islamic names)	100%	1.8	0.76	Steady; peak slowly declining (11 in 2022 → 5 in 2026)
কুরআন (Quran)	100%	2.3	0.62	Ramadan peaks, plus an unexplained **late-December** peak (49 in 22–28 Dec 2024; 50 in 21–27 Dec 2025)
রোজা (fasting)	100%	—	0.61	Never zero off-season (median 3): people look up next Ramadan's date all year
umrah	100%	2.0	0.10	Mild winter/pre-Ramadan high (Jan–Mar)
Seasonal comparison: সেহরি, ইফতার, শবে বরাত, শবে কদর, আশুরা, ঈদে মিলাদুন্নবী, ফিতরা, কুরবানি	9–35%	—	0.02–0.24	Zero in **65–91%** of weeks (শবে কদর 91% zero; কুরবানি 65% zero)

[Measured] Source: (Trends T9; Trends T6; Trends T8). The yearly peaks of the year-round terms are also falling. The prayer-time anchor's yearly peak dropped from 37 to 24 and dua's from 100 to 52 between 2023 and 2026. That is part of the broader 30–60% decline in Google search for Islamic terms covered in 03. The cause (AI answers, apps, YouTube, phrasing drift) is not verified.

Site traffic rises only 1.2–1.9x in Ramadan

Keyword spikes of 5–40x do not translate into site-level spikes of the same size. Ahrefs' **modelled** monthly organic-traffic estimates for the two BD-focused sites show a Ramadan or post-Ramadan monthly high of about **1.2–1.9x the previous month**, followed by a drop (Ahrefs hadithbd.com; Ahrefs muslimbangla.com). [Measured, third-party model]

Site	2023 (Ramadan 23 Mar–21 Apr)	2024 (12 Mar–10 Apr)	2025 (2–31 Mar)	2026 (19 Feb–20 Mar)
hadithbd.com (BD = 91.7% of traffic)	Mar 113.8K → **Apr 164.9K** (1.45x) → May 146.7K	Mar 187.2K → **Apr 342.5K** (1.83x) → May 279.2K	Mar 399.8K → **Apr 695.9K** (1.74x) → May 168.6K	Feb 397.1K → **Mar 489.7K** (1.23x) → Apr 384.4K
muslimbangla.com	Mar 29.3K → **Apr 48.6K** (1.66x) → May 36.5K	Mar 55.8K → **Apr 76.0K** (1.36x) → May 42.9K	Mar 135.8K → **Apr 167.1K** (1.23x) → May 107.7K	Feb 224.5K → **Mar 357.0K** (1.59x) → Apr 230.6K

Three caveats apply. First, the Ahrefs high often lands in the month **after** Ramadan; in April 2025, for example, Ramadan was entirely in March. [Inferred] That is probably a lag in how Ahrefs stamps months, not a real post-Ramadan surge. Second, hadithbd's crash from 696K to 169K in May 2025 is too steep to be seasonal. [Inferred] It most likely reflects a ranking loss. Third, muslimbangla is growing strongly year on year, so its seasonal swing sits on top of growth. ihadis.com's series is dominated by a ranking jump rather than seasonality (5–6K a month in 2025, 716K in March 2026 and 992K in April 2026), and only 36% of its search traffic is from Bangladesh (Ahrefs ihadis.com). Semrush figures for muslimbangla (2.05M visits in Sep 2026, +143% month on month) conflict with Ahrefs and with an earlier Semrush snapshot. They are different models, and none covers Ramadan (Semrush). [Inferred] The Ramadan wave flows mostly to time and calendar utilities, niyat and dua pages. General hadith and Islamic-content sites keep a large year-round base that dampens the monthly swing.

Serving users year-round: a daily, weekly and annual rhythm

The following is **[Inferred]** from the measured patterns above.

Daily: prayer times plus one small item. Prayer times and dua are the only Islamic searches that never stop, and both peak around Fajr. A fast "today" view for the user's district, with the next prayer, sehri and iftar, and the day's Hijri date (BD moon sighting), paired with one dua or a few ayat with উচ্চারণ and audio, matches the strongest daily demand. The second daily window is Asr to Maghrib, which fits evening adhkar. Dream interpretation peaks in the same morning window. It is an engagement opportunity, but it needs careful framing (see 07).

Weekly: Friday. Surah Kahf, Jumu'ah rakat and niyat, the khutbah text (users search for "প্রথম ও দ্বিতীয় খুতবা pdf / বাংলা উচ্চারণ", the first and second khutbah) and shareable Friday greetings. Friday multiplies these searches 25–60x, so it is the most reliable recurring traffic moment outside Ramadan.

Annual: an occasion engine. About 10 occasion pages, each moving from countdown and BD date, to how-to, to next year's date. Each goes live 2–3 weeks before the event, because ramps are short (Shab-e-Barat and Qurbani build over 2–4 weeks; Milad and Ashura over 1–2 weeks). In 2026 the occasion months were January (Meraj; Ijtema in normal years), February (Barat, Ramadan), March (Qadr, Eid), May (Hajj, Qurbani), June (Ashura) and August/September (Milad). That gives users a reason to return roughly every one to two months.

The quiet season is September to December. After Milad there is no major occasion until Ijtema and Meraj in January. Year-round content (Quran, hadith, names, dua) and life-event searches (births and aqiqah, death rites, marriage) must carry engagement in that period. It is also the build window before the 2027 cluster.

Q1 2027 concentrates the year's seasonal demand. In 2027, Ijtema (8–10 and 15–17 Jan), Shab-e-Meraj (about 5–6 Jan), Shab-e-Barat (about 23 Jan) and the start of Ramadan (about 8–10 Feb) all fall within about six weeks, followed by Laylatul Qadr (about 6 Mar) and Eid-ul-Fitr (about 10–11 Mar). A product that is not live and indexed by **mid-December 2026** will miss the reactivation moment (Shab-e-Barat) and the acquisition moment (Ramadan week 1). Reviews show Ramadan is when many users adopt an Islamic app ("রমজান মাসের ওসিলায়", on the occasion of Ramadan) (Play: Quran Majeed).

2027 occasion	Expected date in BD	Status of date	Content live by (inferred)	Pages that carry the demand
Shab-e-Meraj	night of about 5–6 Jan	Analyst estimate (no source)	mid-Dec 2026	Date, event history, authenticity of special prayers
Bishwa Ijtema	8–10 and 15–17 Jan	**Official**	mid-Dec 2026	Dates, location, history
Shab-e-Barat	night of about 23 Jan	Estimate (calendar site)	early Jan 2027	Date and countdown, amal and nafl with grading, virtue hadith with grading
Ramadan begins	about 8–10 Feb	Estimate (conflicting sources)	mid-Jan 2027	District sehri and iftar calendars, niyat, duas, tarawih, Ramadan rules
Zakat and fitra	Ramadan weeks 1–4	Follows Ramadan	early Feb 2027	Zakat calculator (BD units, current nisab), IF fitra amount once announced
Laylatul Qadr	night of about 6 Mar	Estimate	late Feb 2027	Qadr dua, nafl guidance with grading
Eid-ul-Fitr	about 10–11 Mar	Estimate	late Feb 2027	Eid prayer method, takbir, "if I join late"
Hajj flights and Hajj	from 8 Apr; Hajj about 15 May	**Official roadmap**	Mar 2027	Hajj guide, talbiyah with উচ্চারণ, Arafah dua
Eid-ul-Adha and Qurbani	about 16–17 May	Estimate	late Apr 2027	Qurbani rules, animal age, shares, meat distribution, slaughter dua
Ashura	about 16 Jun	Estimate	early Jun 2027	Ashura fasting dates and virtue
Eid-e-Milad-un-Nabi	about 15–16 Aug	Estimate	early Aug 2027	Date; neutral handling of the permissibility debate
Hajj 2028 registration	likely Jul–Sep 2027	Inferred from 2026 pattern	Jun 2027	Registration deadline tracker, package explainer

Acquisition and retention moments differ. Ramadan week 1 brings the most new users, searching for sehri and iftar times. Shab-e-Barat week, when prayer-time searches hit their yearly high, brings lapsed users back. Friday and the daily prayer-time view are what keep them between occasions.

Confidence and limitations

Confidence is **high** in the **shape** of the seasonal pattern: which occasions spike, in which week, and how short the ramps are. Five years of weekly data agree with every verified 2026 date and with an independent 2018 report. Confidence is **medium** in cross-term magnitudes. Trends rounds small values to integers, exact-phrase matching undercounts terms with several spellings (হজ/হজ্জ, ওমরাহ/ওমরা), and

"ঈদ" is a broad, partly non-religious term. Confidence is **low** in absolute volumes and site traffic. Trends gives relative indices only, and the site figures are Ahrefs and Semrush model estimates that conflict with each other. No first-party or Similarweb traffic history was available, and Similarweb blocked automated access. The Hajj and Umrah registration and package terms are too small in Trends to resolve. Their seasonality rests on autocomplete and news, and the reported 24 Sep registration deadline and the government package price of 5,05,648 Tk come from search snippets and are unverified (Jugantor). **All 2027 Islamic dates except Ijtema and the Hajj roadmap are estimates**, and the 2027 Ramadan start differs by one to two days between sources. The Shab-e-Meraj 2027 date is the analyst's own calculation with no external source. Autocomplete is a single off-season snapshot, so event-week phrasing ("আজকের", today's) is under-represented. Hourly data comes from earlier research and covers no Ramadan week. No app-store seasonality data for Bangladesh was found. Related-query growth figures for occasions ("কদরের রাতের দোয়া" +250%, "আশুরার দিনের আমল" +110%) come from earlier research (Nov 4 2026) and were not re-verified. See 10-research-methodology-and-sources.md.

CHAPTER 9

Win on trust, Bangla and Bangladesh correctness

ABOUT THIS CHAPTER

In plain words. This is the decision chapter. It takes every opportunity from the research, re-checks it against all the evidence, and sorts it into four groups: **Essential for launch**, **Strong next**, **Defer**, and **Not supported by evidence**.

Key takeaway. Ten items are essential for launch: Bangla-aware search and spelling; surah, ayah and dua pages with proofread Bangla pronunciation and audio; sourced duas organised by life situation; district prayer times that match the Islamic Foundation (with both Asr times labelled); a Hijri date that cites Bangladesh's moon sighting; pages for about ten annual occasions with Bangladesh dates; hadith by topic with grades; a report-an-error button and public corrections log; named translator, grader and edition on every item; and Friday content.

Why it matters for the product. It is the practical output of the whole study. It also explains every place where it changed the order from chapter 07, and why.

How to use this chapter. Use it as the starting backlog for planning. Read the "Not supported by evidence" section before adding any feature that is not on the list, and read "Risks and open questions" before committing, because several of them (madhhab stance, sourcing and licensing, scholar review capacity) are decisions only the product owner can make.

Watch out for. No real retention data exists, so the daily-return plan is reasoned from reviews and search patterns, not measured.

Research date: 5 November 2026. This report turns reports 01–08 into a ranked list of product opportunities for a new Bangladesh-focused Islamic web platform. It starts from the opportunity matrix in 07-content-and-feature-gaps.md, re-checks each row against the demand evidence in 03, the intent evidence in 04, the user-voice evidence in 06 and the timing evidence in 08, and classifies each opportunity for launch. It is research for a product team. It does not design screens or specify an implementation.

Evidence labels used here. Demand signals keep the evidence type of the report they come from: **Ahrefs range** (a third-party modelled monthly bucket for Bangladesh such as ">10,000", or an Ahrefs site-page model estimate such as "37K"; never a Google count), **Trends relative** (a Google Trends ratio to the prayer-time anchor "নামাজের সময়"; not volume), **observed suggestion** (Google or YouTube autocomplete on 5 Nov 2026; existence only, no volume), **user review** (verbatim Google Play reviews from the Bangladesh storefront, and our keyword-match counts over them; indicative only) and **audit observation** (what the site audit or a results-page snapshot showed on 5 Nov 2026). Analyst reasoning is marked **[Inferred]**.

Key findings

- **The launch case rests on correctness and trust, not on topic coverage.** Almost every topic is already served somewhere. What no Bangla site combines is spelling-tolerant search, proofread Bangla-script pronunciation (উচ্চারণ), a named source and grade on every item, prayer times that match the Islamic Foundation (IF) with both Asr times labelled, and a Hijri date that follows Bangladesh's moon sighting (05; 07).
- **Ten opportunities are essential for launch.** Seven come from the top of the 07 matrix. Three are moved up because cross-report evidence makes them preconditions or the main source of daily return: IF-matched prayer times (07 rank 10), named provenance (07 rank 16) and Friday content (not scored in 07).
- **Two high-scoring 07 opportunities move down to "strong next".** Myth-checking has the weakest search demand of the 07 top ten (জাল হাদিস, "fabricated hadith", is below 100 a month in Ahrefs), and dream interpretation has high demand (1.32x the prayer-time anchor) but contested scholarly weight. Both depend on scholar-review capacity that is not yet in place.
- **Daily return comes from utilities, and acquisition comes from named items and occasions.** Prayer times and dua are searched in every week of five years and peak around Fajr. Twelve single surah, ayah and dua keywords sit in Ahrefs' >10,000 bucket, all rated KD "Easy". Ramadan week 1 runs about 40x the off-season level (03; 08).
- **Timing is tight.** In 2027, Shab-e-Meraj, Bishwa Ijtema, Shab-e-Barat and the start of Ramadan fall between early January and mid-February. Report 08 infers that a product not live and indexed by **mid-December 2026** misses both the reactivation moment (Shab-e-Barat) and the acquisition moment (Ramadan week 1). That is about six weeks after this report's date.

- **Several commonly assumed features are not supported by the evidence:** accounts and login, a madhhab picker, women-specific tools such as period tracking, azan alarms on the web, offline web use, a tasbih counter as a destination, a daily-hadith push as a return driver, Bijoy/Unicode rendering fixes, and "ad-free" as a differentiator against dedicated Islamic sites (06).
- **Google search is shrinking for the content a new site would publish.** Core Quran, hadith and dua terms fell 30–60% in Trends between 2023 and 2026, and an AI-generated answer sat on all 6 sampled Google results pages (03). **[Inferred]** Static text pages are the least defensible asset. Utilities, verification and audio-checked pronunciation are harder for an AI box to replace.

How the ranking was built, and why it differs from 07

Report 07 scored 24 opportunities on Demand, Severity, Competitive gap, Long-term value and (6 − Complexity), each 1–5, for a priority score out of 25. Those scores are analyst judgements, and 07 notes that re-weighting would reorder the middle of the list. This report keeps 07's scores visible and changes the order only where another report argues for it.

Four cross-report tests were applied to every row. **[Inferred]** These classification rules are the analyst's:

1. **Is the need rated Strong in 06, or is demand measured?** Measured means an Ahrefs bucket of >1,000 or more, or a Trends ratio of 0.10x the anchor or more (03).
2. **Does it earn daily or weekly return, or is it a precondition for trust in other content?** This draws on 04's return reasons and 08's daily, weekly and annual cycles.
3. **Can it ship without an unresolved dependency?** Examples are a scholar panel, a licensing deal or an unverified IF method.
4. **Does it fit the 2027 seasonal window in 08?**

Essential for launch means passing tests 1 and 2 with complexity 3 or less in 07 and no blocking dependency, or being a precondition for an essential item. **Strong next** means real evidence, but blocked by scholar capacity, editorial policy, a strong incumbent or a later seasonal date. **Defer** means weak or web-unevidenced demand, or high complexity or licensing cost. **Not supported by evidence** means the research looked and found nothing, or found contrary evidence.

Final ranking at a glance

Rank	Opportunity	07 rank (score /25)	Class	Movement and reason
1	Bangla-aware search and spelling layer	1 (21)	Essential	Unchanged
2	Canonical surah, ayah and dua pages with proofread উচ্চারণ and audio	2 (20)	Essential	Unchanged
3	Sourced, need-based dua pages	7 (19)	Essential	**Up 4.** Largest year-round family in 03 and 08; daily Fajr window
4	IF-matched district prayer times, both Asr labelled	10 (18)	Essential	**Up 6.** Only never-zero daily utility (08); 07's low gap score does not reduce its return role
5	Bangladesh Hijri date with a cited moon-sighting source	5 (20)	Essential	Unchanged
6	Occasion engine (about 10 annual occasions, BD dates)	3 (20)	Essential	Down 3 in rank, but time-critical for Q1 2027
7	Topic-hadith hubs with grade and reference	4 (20)	Essential	Down 3 in rank only
8	Text accuracy: report-an-error and a public corrections log	9 (19)	Essential	**Up 1, reclassified.** Precondition for ranks 2, 3 and 7
9	Named translator, grader and edition on every item	16 (17)	Essential	**Up 7.** Lowest-cost trust item and a precondition
10	Friday weekly content	not scored	Essential	**New.** Friday lifts some terms 25–60x (08)
11	Myth-check section for viral claims	6 (20)	Strong next	**Down 5.** Weak search demand; needs a scholar reviewer
12	Dream interpretation with sourced, careful framing	8 (19)	Strong next	**Down 4.** Editorial risk; needs a policy first
13	Madhhab-labelled answer pages on the seven query templates	11 (18)	Strong next	Down 2; complexity 5 (scholar panel)
14	Zakat calculator in BD units, plus the IF fitra amount	19 (15)	Strong next, due early Feb 2027	**Up 5.** Falls inside the 2027 Ramadan window; rising queries

Rank	Opportunity	07 rank (score /25)	Class	Movement and reason
15	Islamic names with verified meanings; sourced captions	12 (18)	Strong next	Down 3; acquisition more than retention
16	Women's fiqh pages, reviewed and labelled by school	13 (18)	Strong next	Down 3; depends on reviewer capacity
17	BD-context Islamic finance explainers	14 (17)	Strong next	Down 3; observed demand only
18	Ruqyah safety pages	17 (16)	Strong next (small)	Unchanged in substance
19	Installable offline web app (PWA)	15 (17)	Defer	**Down 4.** Offline use is not evidenced for the web (06)
20	Audio-first destinations and sleep playlists	18 (15)	Defer	Per-item audio moves into rank 2
21	Faraid (inheritance) calculator	20 (15)	Defer	Unchanged
22	Children's section	21 (15)	Defer	Unchanged
23	Hifz and revision tool	23 (14)	Defer	Unchanged
24	Licensed book library	24 (13)	Defer	Print view of own pages moves into rank 2
25	Tasbih counter as a destination	22 (15)	Not supported as a destination	Only as a small attachment to zikir pages

Essential for launch

1. Bangla-aware search and spelling layer

Field	Detail
What it is	Search and page labelling that treat every common spelling, synonym, Banglish transliteration and typo of a term as the same thing (নামাজ / namaj / সালাত / "namaj"), across all content types. Visible labels use the popular spelling; scholarly spellings work as aliases. Surah and ayah pages also carry Latin-script names.
User need	"I typed it the way I spell it and found nothing" (07). Users type popular spellings and Banglish, and they write in Banglish too (06).
Evidence	05 § Search tests: quran.com's search API returns 0 for নামাজ but 286 for সালাত (quran.com API); only hadithbd maps Banglish (hadithbd namaj); alkawsar returns nothing for the typo "নামজ" (alkawsar). 03 § Spelling variants: দোয়া is about 24x দুয়া and about 300x দুআ; নামাজ is about 18x নামায (Trends namaz spellings). 03 § Script split: "surah mulk" is about 7x "সূরা মুলক" (Ahrefs surah mulk).
Demand signal	Trends relative (spelling ratios of 6–300x within single comparison sets); audit observation (search tests). There is no measure of how often visitors use on-site search.
Competitive gap	Large. Only hadithbd handles Banglish, and only islamqa corrects typos, through Google's own search engine. No site does both.
Complexity	3/5 in 07: a Bangla phonetic and synonym layer.
Long-term value	5/5 in 07. It compounds, because every new page becomes reachable by more spellings. It is also the only opportunity that improves every other row (07).
Confidence	**High** that the gap exists (directly tested). **Medium** on its weight, because acquisition mostly comes through Google, and the labelling half (popular spellings, Latin aliases) matters for that more than on-site search does.

2. Canonical surah, ayah and dua pages with proofread উচ্চারণ and audio

Field	Detail
What it is	One page per high-demand surah, ayah range and dua, with Arabic, proofread Bangla-script pronunciation (উচ্চারণ), a named Bangla translation, per-verse or per-dua audio as a pronunciation check, the answers to the format questions users type ("কত পারায়", which para; ফজিলত, virtue, with its grading), a large default font and a print view. It is framed as a learning aid, not a substitute for learning Arabic.
User need	"I can't read Arabic; I need to say it correctly." The query names the object and the format: "সূরা ইয়াসিন বাংলা উচ্চারণ" (Surah Yasin, Bangla pronunciation) (04 § Worked example).
Evidence	03 § Demand concentrates: 12 keywords reach Ahrefs' >10,000 bucket, all KD "Easy", including আয়াতুল কুরসি বাংলা উচ্চারণ (Ahrefs ayatul kursi). 06 § Language: "দুয়া ও জিকিরের আরবি উচ্চারন টা বাংলায় দেন" (give the dua and zikir pronunciation in Bangla), 231 helpful votes (Play: Ibadah). Audio is how users check themselves: "অডিও উচ্চারণ শুনে শুনে ভুল গুলো ঠিক করি" (I correct my mistakes by listening to the audio) (Play: Greentech Al Quran).

Field	Detail
Demand signal	Ahrefs range (>10,000 for 12 items; about 60 more at >1,000, almost all Easy); Trends relative ("বাংলা উচ্চারণ" rose from 32.7 to 35.4 between 2023 and 2026 while most Islamic terms fell; the term has non-religious uses too); user review.
Competitive gap	Among the dedicated sites audited, only muslimbangla shows Bangla-script pronunciation per verse. quran.com offers Latin transliteration only (muslimbangla sura 1; 05). On Google the page opens with an AI answer and a video carousel, then muslimbangla and a TV channel's site (04).
Complexity	3/5 in 07: proofreading cost for every verse and dua. Audio licensing is not counted in 07's estimate.
Long-term value	5/5 in 07; core to the audience.
Confidence	**High.** Measured demand, a documented gap and repeated user requests agree. The liability is equally well evidenced: users report transliteration errors verse by verse (Play: E-book Library), so this item depends on rank 8.

3. Sourced, need-based dua pages

Field	Detail
What it is	Dua pages organised by life situation ("I am in debt", "I can't sleep", a deceased parent, exams), with masnoon duas that carry a source and grade, উচ্চারণ, audio, how many times and when to recite. It includes the bundles users name: morning and evening adhkar, before sleep, after salah.
User need	A situation, often on someone else's behalf ("স্বামীর রিজিক বৃদ্ধির দোয়া", dua for my husband's rizq). Users want to know how many times, when, and the source (04 § Dua and zikir).
Evidence	03 § C. Dua and zikir: দোয়া averages 2.50x the anchor's median week over five years (Trends T9); Ahrefs lists 17,365 keyword ideas for দোয়া (Ahrefs দোয়া). 05: muslimbangla's 40 dua categories carry no source references (muslimbangla dua). Users praise sourcing: "The best thing is all of them have authentic references" (Play: Hisnul Muslim BN).
Demand signal	Trends relative (2.50x anchor-median, the largest year-round Islamic term measured; never zero in five years per 08); Ahrefs range (>10,000 for দোয়া কুনুত, সাইয়েদুল ইস্তেগফার, ইফতারের দোয়া and তারাবির নামাজের দোয়া; >1,000 for situational duas such as sleep, janaza, istikhara, evil eye, rizq and debt); observed suggestion (bundles, trusted scholar names typed into queries).
Competitive gap	Moderate. hadithbd carries a sourced Hisnul Muslim (267 duas) and ranks #1 for সাইয়েদুল ইস্তেগফার (Ahrefs site page) (02). News portals and ad-heavy blogs win many situational dua queries without grading (03).
Complexity	2/5 in 07: a Hisnul Muslim-type corpus already exists.
Long-term value	4/5 in 07: daily-use content.
Confidence	**High.** Why it moves up from 07 rank 7: 07 scored the competitive gap at 3 because hadithbd is sourced, but 03 and 08 show this is the largest and steadiest demand family. Earlier research (Nov 4 2026) found dua searches peak at 05:00–06:00, so dua pages also carry daily return. One evidence conflict: "রিজিক বৃদ্ধির দোয়া" is >1,000 in Ahrefs but 0.001x as an exact phrase in Trends. 03 attributes this to Trends' exact-phrase limit, not a contradiction.

4. IF-matched district prayer times, both Asr times labelled

Field	Detail
What it is	A district timetable that matches the Islamic Foundation by default. It shows start, end and forbidden times, both Asr times labelled by method (first or second shadow) rather than by sect, the source of the times, and manual location choice without requiring GPS. Sehri and iftar times for Ramadan are part of this. It does not promise an azan alarm.
User need	"What time is Asr in my district, by Islamic Foundation timing?" Accuracy is judged to the minute (04 § Namaz).
Evidence	06 § Local time: reviews with 188 and 196 helpful votes praise district schedules, and one asks "ইসলামিক ফাউন্ডেশন এর সময়,অনুযায়ী করে দিন" (please follow Islamic Foundation times) (Play: Ibadah). 05 § Asr: on 5 Nov 2026 ihadis showed Asr at 2:54 PM, while muslimbangla and salat.habibur showed 3:41–3:42 PM; only salat.habibur shows both (salat.habibur; ihadis).
Demand signal	Trends relative ("নামাজের সময়" is the 1.00x anchor, "namaz time" 1.06x, "নামাজের সময়সূচি" 0.23x; never zero in any week; +8–20% on Fridays) (Trends BD 12-m); Ahrefs range (site-page model estimates of 37K a month for নামাজের সময়সূচি and 31K for ফজরের নামাজের সময়, from muslimbangla's keyword list; model outputs, not Google counts) (Ahrefs muslimbangla.com); user review.
Competitive gap	Small in 07 (2/5), because strong incumbents exist: for নামাজের সময়সূচি, Ahrefs lists muslimbangla at position 4, while 02's Google-BD check (headless, non-BD IP) showed muslimbangla #1 and salat.habibur #2 (02). The two position readings conflict; both put the incumbents near the top. The IF's own site publishes no usable timetable (IF).
Complexity	3/5 in 07. **Blocking dependency:** the IF's calculation method is unverified. A 2026 Ittefaq report describes adding or subtracting up to 9 minutes from Dhaka, while a Jugantor snippet quotes the IF calling that method "ভুল ও ভিত্তিহীন" (wrong and baseless) (Ittefaq; Jugantor). 06 says this must be verified against an IF document before launch.

Field	Detail
Long-term value	5/5 in 07: a daily habit.
Confidence	**High** for the need. **Medium** for the ability to win traffic against incumbents. **Low** for method correctness until the IF document is obtained. Why it moves up from 07 rank 10: 08 shows prayer times are searched in every week of five years and peak at 04:00–06:00 (earlier research). Report 01's conclusion recommends daily-use utilities over static pages as Google traffic declines. The timetable also carries the Hijri date (rank 5) and the Ramadan sehri and iftar times (rank 6). A low competitive-gap score does not remove its role as the return driver. Upazila-level times have only Weak evidence in 06 (two reviews), so the district is the evidenced default.

5. Bangladesh Hijri date with a cited moon-sighting source

Field	Detail
What it is	A Hijri date that follows Bangladesh's National Moon Sighting Committee, states that source, can be corrected by ±1 day within hours of an announcement, and rolls over at Maghrib. It sits beside the Bangla calendar date (বঙ্গাব্দ), which has Moderate evidence.
User need	"The Arabic date in my app is wrong." Users append "বাংলাদেশ" to date queries because Bangladesh's dates often differ from Saudi Arabia's (08).
Evidence	06 § Hijri: Bangladesh celebrated both Eids of 2026 a day after Saudi Arabia (Daily Star; bdnews24). "আরবি তারিখ চাঁদ দেখার উপরে নির্ভর করে দেখায় না" (the Arabic date isn't based on moon sighting) (Play: Islami Jindegi). 05 § Hijri: BD sites showed 24 Jumada al-Awwal on 5 Nov 2026, islamqa showed the 25th (islamqa).
Demand signal	Observed suggestion ("... কত তারিখে বাংলাদেশ" on every occasion); user review (26 reviews mention the Hijri date or the moon, own count). Search volume for the date itself is not measured.
Competitive gap	Largest possible (5/5 in 07): **no site audited cites the Moon Sighting Committee**. ihadis and muslimbangla also disagreed on the Bangla calendar date (21 vs 20 Kartik).
Complexity	2/5 in 07: a manual update on each announcement.
Long-term value	4/5 in 07: a daily trust signal.
Confidence	**High** for the divergence (documented). **Medium** for demand size: 06 rates the need Strong because of the factual divergence, not because complaints are numerous.

6. Occasion engine for about 10 annual occasions

Field	Detail
What it is	One durable page per occasion (Shab-e-Meraj, Shab-e-Barat, Ramadan, Laylatul Qadr, Eid-ul-Fitr, Hajj, Eid-ul-Adha and Qurbani, Ashura, Eid-e-Milad-un-Nabi, Bishwa Ijtema). Each shows the Bangladesh date and countdown before the event, how-to content (niyat, rakat, dua, amal with grading) during it, and next year's BD date afterwards. Ramadan includes district sehri and iftar calendars and the IF fitra amount once announced.
User need	"When is it in Bangladesh, and what do I do?" (04 § Ramadan and Hajj).
Evidence	08 § Annual calendar: "রমজান" runs about 40x its off-season level in Ramadan week 1 (Trends T1); Shab-e-Barat peaks at 6.3x the anchor's median week (Trends T2). On 5 Nov 2026 autocomplete already offered "শবে বরাত ২০২৭ কত তারিখে বাংলাদেশ" (Autocomplete শবে বরাত).
Demand signal	Trends relative (সেহরির শেষ সময় 0.34x and ইফতারের সময় 0.33x as 52-week means, almost all in Ramadan; seasonal terms are zero in 65–91% of weeks); Ahrefs range (>10,000 for ইফতারের দোয়া and তারাবির নামাজের দোয়া; >1,000 for শবে বরাতের ফজিলত সম্পর্কে হাদিস); observed suggestion (2027 dates, countdowns).
Competitive gap	Partial (3/5 in 07). News portals publish dated articles, calendar sites post estimates, and ihadis has programmatic district Ramadan calendars. No single page moves from countdown to how-to to next year's BD date.
Complexity	2/5 in 07: about 10 templated pages a year.
Long-term value	5/5 in 07: an annual return cycle, roughly every one to two months (08).
Confidence	**High** for the shape of seasonal demand (five years of weekly data match every verified 2026 date). **Medium** on payoff: Ahrefs' modelled traffic for hadithbd and muslimbangla rises only about 1.2–1.9x in the Ramadan month, against 5–40x for individual keywords (08 § Site traffic). Occasions bring acquisition and reactivation; they are not the year-round base. Why it ranks sixth, not third: it is time-critical but feeds on ranks 2–5, because its how-to content is dua, surah and prayer-time content and its dates depend on the Hijri source.

7. Topic-hadith hubs with grade and reference

Field	Detail
What it is	Pages for " নিয়ে হাদিস" (hadith about mothers, rizq, patience, marriage, death) with Arabic, Bangla, a named grade and grader, book and number, and a share card that keeps the reference attached. They link into a hadith library rather than replacing it.
User need	"I need a hadith about my mother / rizq / patience to share." The largest measured hadith group wants a short hadith to post, quote or use in school (04 § Hadith).
Evidence	03 § B. Hadith: Ahrefs >1,000 for ছোট হাদিস (short hadith), হাদিসের বাণী and ১০০ টি ছোট হাদিস (Ahrefs হাদিস). Caption sites rank first with 0 Arabic characters, no grading and about 28–44 ad-script references (Bing মা নিয়ে হাদিস).
Demand signal	Ahrefs range (several >1,000 items); observed suggestion (a long tail of topics, each with ক্যাপশন, ছবি and আরবি variants, and Banglish forms); Trends relative ("হাদিস" 1.13x, but its top related query is the homework query "হাদিস কি").
Competitive gap	4/5 in 07. hadithbd and ihadis serve collection browsing, not topics. Library browsing is not the gap: "সহিহ বুখারী বাংলা" is well served (07 § What is deliberately not a gap).
Complexity	2/5 in 07: built on existing graded corpora (licensing aside).
Long-term value	4/5 in 07: shareable pages spread the brand.
Confidence	**Medium-High.** The results-page quality gap comes from Bing, used as a proxy for Google.

8. Text accuracy: report-an-error and a public corrections log

Field	Detail
What it is	Proofread text, a visible report-an-error route on every verse, hadith and dua, a public response, and a dated corrections log ("সংশোধন").
User need	"This verse or hadith text has a mistake" and "I reported it but nobody responded" (04).
Evidence	06 § Language and 04 § Worked example: a 1★ review for "কুল্লা" instead of "কুল্লি" in Yasin (Play: PG Apps BD); "রিপোর্ট করেছি- কিন্তু কোন রেসপন্স নেই" (I reported it but got no response) (Play: IRD Al Hadith).
Demand signal	User review (86 spelling or translation-error reviews, 37 rated 3★ or lower, own count, per 07); audit observation (no public corrections log on the sites audited).
Competitive gap	3/5 in 07: every major app has some errors.
Complexity	3/5 in 07: proofreading plus a workflow.
Long-term value	5/5 in 07: a trust moat.
Confidence	**High.** Reclassified as essential because ranks 2, 3 and 7 publish exactly the text users audit. 06's conclusion is that one visible error costs more trust than a missing feature.

9. Named translator, grader and edition on every item

Field	Detail
What it is	Every translation, tafsir, hadith grade and dua carries the name of its translator, grader or source edition. Where several translations are licensed, users can choose between them.
User need	"Whose translation or tafsir is this?" Users ask for named translations (the Islamic Foundation's) and named tafsirs (Jalalayn, Ma'ariful Quran) (06 § Language).
Evidence	05 § Full feature matrix: quran.com names 4 Bangla translations and 4 Bangla tafsirs (quran.com translations API); muslimbangla's translator is not named; ihadis names no grader or translator (ihadis Bukhari 1). 10 conflict #19: one reviewer wants the IF translation, another criticises an IF rendering, which supports named, switchable translations.
Demand signal	User review; audit observation.
Competitive gap	3/5 in 07: missing on the most-used BD sites, done well by quran.com.
Complexity	2/5 in 07: metadata. Licensing is not counted.
Long-term value	4/5 in 07: trust.

Field	Detail
Confidence	**High.** Why it moves up from 07 rank 16: it is the cheapest trust item, it is a precondition for ranks 2, 3 and 7, and 05's conclusion lists "a name on every translation, grade and dua" among the cheapest wins.

10. Friday weekly content

Field	Detail
What it is	A weekly set for Friday: Surah Kahf (with "first 10 ayat"), Jumu'ah rakat and niyat, the khutbah text with উচ্চারণ, Friday amal, and shareable Friday greetings whose quotes carry references. It reuses the pages in ranks 2, 3 and 4.
User need	Friday routines and Friday posting (04 § Quran; 08 § Weekly and daily cycles).
Evidence	08: on Fridays "জুমার নামাজ" runs about 40–60x and "সূরা কাহাফ" about 25–45x their other-weekday levels (Trends TD daily). The spelling সূরা কাহাফ is used about 40x more than সূরা কাহফ on Fridays (03).
Demand signal	Trends relative (Friday multipliers); Ahrefs range (surah kahf >10,000; surah kahf first 10 ayat >1,000); observed suggestion ("প্রথম ও দ্বিতীয় খুতবা pdf / বাংলা উচ্চারণ", first and second khutbah).
Competitive gap	Not assessed in 07 or the audit. prothomalo.com appeared in results for সূরা কাহফ প্রথম ১০ আয়াত (01). Treat the gap as unknown.
Complexity	Not scored in 07. **[Inferred]** Low, because it reuses pages already in scope.
Long-term value	**[Inferred]** High: 08 calls Friday the most reliable recurring traffic moment outside Ramadan.
Confidence	**Medium.** Demand and its weekly rhythm are measured. The competitive gap is not. This is an addition to the 07 matrix, argued from 08.

Strong next

11. Myth-check section for viral claims

Field	Detail
What it is	Short pages that state a popular claim, the verdict, its grading and source, and the named scholar who reviewed it. They are linked from the related dua, hadith and occasion pages.
User need	"Is this viral dua or claim real?" Examples: "৮০ বছরের গুনাহ মাফের দোয়া" (a dua that forgives 80 years of sins), "জুমার নামাজ ২২ রাকাত" (22 rakat of Jumu'ah), "ইমাম মাহদীর আগমন ২০২৮" (Imam Mahdi's coming in 2028) (03 § New topics).
Evidence	07 row 6 (Trends গুনাহ related). Against it: জাল হাদিস and every authenticity variant are below 100 searches a month (Ahrefs জাল হাদিস), and 06 rates authenticity "Not evidenced as a traffic driver".
Demand signal	Trends relative (related-query index 8 for the 80-years dua under গুনাহ); Ahrefs range (<100); observed suggestion.
Competitive gap	5/5 in 07: nobody does it.
Complexity	3/5 in 07: needs scholarly review.
Long-term value	5/5 in 07: defines credibility.
Confidence	**Medium.** Why it moves down from 07 rank 6: of 07's top ten it has the weakest demand (D2), and it cannot ship without a named reviewer. Grading on Shab-e-Barat amal and virtue-hadith content belongs at launch (rank 6), because 08 notes that content carries the most authenticity disputes. The Jahangirnagar University study often cited for misinformation (69.3% of commenters tended to believe it) covered communal and political cases, not fake hadith (UNB; 06).

12. Dream interpretation with sourced, careful framing

Field	Detail
What it is	Pages for common dream objects (fish, snake, marriage, a baby, a dead person) that give sourced classical views, state clear limits on interpretation and link to relevant duas.
User need	"I saw a snake in my dream. What does it mean?", often searched right after waking (04 § Lifestyle).
Evidence	03 § New topics: স্বপ্নে is 1.32x the anchor and still rising (Trends স্বপ্নে related); results include Facebook, Quora and the Kolkata newspaper Anandabazar Patrika (Google স্বপ্নে সাপ দেখলে কি হয়).

Field	Detail
Demand signal	Trends relative (1.32x, larger than prayer times; earlier research, Nov 4 2026, recorded a 05:00–08:00 peak and a yearly mean that rose from 16 in 2021 to 40 in 2026 within its set).
Competitive gap	4/5 in 07: no careful BD Islamic source.
Complexity	3/5 in 07: sensitive editorial framing.
Long-term value	3/5 in 07: engagement value with contested scholarly weight.
Confidence	**High** for demand. **Low** for what users accept as a careful answer: no review or user-voice evidence covers dream content. Why it moves down from 07 rank 8: this is where demand and trust policy pull hardest in opposite directions. It should follow an explicit editorial policy and scholar sign-off. It is the first candidate after launch if the product owner accepts that policy.

13. Madhhab-labelled answer pages on the seven query templates

Field	Detail
What it is	Answer pages built on the seven Bangla question templates in 03 (ruling, sin-check, validity, how-to, list or count, amount or date this year, authority-tagged). Each gives the ruling, evidence, school differences labelled, a named reviewer and a date. Private, anonymous asking would follow once answering capacity exists.
User need	"Is this jayez? Who says so, and by which school?" (04 § Q&A).
Evidence	03 § Seven question templates; Hanafi and Ahl-e-Hadith answers appear side by side with no labels (Google রাগের মাথায় তালাক); muslimbangla runs mufti-answered masail at scale (muslimbangla masails); a user asks another app to "add a question option like Muslim Bangla's" (Play: Islami Jindegi).
Demand signal	Trends relative (জায়েজ 0.30x, হারাম 0.31x, তালাক 0.23x; generic words that include non-religious uses) (Trends জায়েজ); observed suggestion (templates and authority tags); user review.
Competitive gap	4/5 in 07: no labelling anywhere. muslimbangla (IDs above 170,000) and alkawsar are strong on answer volume and named authority.
Complexity	5/5 in 07: needs a scholar panel.
Long-term value	5/5 in 07: authority.
Confidence	**Medium.** Strong next because of complexity, not weak demand.

14. Zakat calculator in BD units, plus the IF fitra amount

Field	Detail
What it is	A Bangla zakat calculator in local units (ভরি, রত্তি, আনা) with the current nisab and gold price, savings certificates (সঞ্চয়পত্র) and DPS, plus the IF fitra amount as soon as it is announced.
User need	"How much zakat do I owe in taka this year?" (04).
Evidence	03 § E. Q&A: rising queries "কত টাকা হলে যাকাত দিতে হবে ২০২৬" (Breakout) and "যাকাত ক্যালকুলেটর বাংলাদেশ" (+120%) (Trends যাকাত related); the results page is led by charities and foreign tools (Google যাকাত ক্যালকুলেটর).
Demand signal	Trends relative (যাকাত 0.16x, peaking in Ramadan weeks 1–3; ফিতরা 0.083x, peaking in the last ten days); observed suggestion.
Competitive gap	3/5 in 07: muslimbangla's calculator is good, with BAJUS gold prices and a "consult a qualified mufti" disclaimer (muslimbangla zakat).
Complexity	3/5 in 07: yearly nisab and price updates plus review.
Long-term value	3/5 in 07: annual.
Confidence	**Medium.** Why it moves up from 07 rank 19: 08's 2027 calendar puts zakat and fitra content inside the Q1 window, with content live by early February 2027. It stays "next" rather than "launch" because a capable incumbent exists and the tool needs a yearly update process.

15. Islamic names with verified meanings; sourced captions

Field	Detail
What it is	Name pages with meaning, origin and how the meaning was verified; a caption and quote library where every quoted hadith or ayah carries its reference.
User need	Naming a newborn; finding something to post (04 § Lifestyle).
Evidence	03 § H. Lifestyle: no caption site cites its source; names come from HadithBD, Facebook and FirstCry, an Indian parenting site (Google মেয়েদের ইসলামিক নাম অর্থসহ).
Demand signal	Trends relative (ইসলামিক নাম 0.52x, searched in every week of five years, with a slowly declining peak; ইসলামিক ক্যাপশন 0.13x; ইসলামিক স্ট্যাটাস 0.078x and shrinking); Ahrefs range (a site-page model estimate of 19K a month for মেয়েদের ইসলামিক নাম, where hadithbd ranks #2) (Ahrefs hadithbd.com).
Competitive gap	4/5 in 07.
Complexity	2/5 in 07: list content.
Long-term value	3/5 in 07: acquisition more than retention.
Confidence	**Medium.** Caption demand probably concentrates on Facebook and Pinterest, which were not measured (03).

16. Women's fiqh pages, reviewed and labelled by school

Field	Detail
What it is	Carefully reviewed pages on menstruation, ghusl, women's salah and related masail, with views labelled by school where they differ and no social prompts on the page.
User need	A private question users do not want to ask in a public feed (04).
Evidence	06 § Women users: "মহিলাদের সিজদার ব্যাপারটা পরিষ্কার করা হয়নি" (the women's sajdah is not made clear) (Play: Deen); results pages are dominated by Facebook posts and rival-school answers (Google হায়েজ অবস্থায় কুরআন পড়ার বিধান). Earlier research (Nov 4 2026) found IslamQA Bangla's two most-read answers, about 223,600 and 222,700 reads, concern sexual purity and masturbation (IslamQA Bangla).
Demand signal	Trends relative (হায়েজ 0.016x); observed suggestion; audit observation (read counts). Google underrepresents these queries; one seed returned no suggestions.
Competitive gap	4/5 in 07.
Complexity	4/5 in 07: reviewed answers plus anonymity.
Long-term value	4/5 in 07: loyalty.
Confidence	**Medium-Low.** Content demand is observed. Women-specific *features* are not evidenced (see "Not supported" below), and women's voices are faint in the review corpus (about 61 keyword matches, many false positives).

17. BD-context Islamic finance explainers

Field	Detail
What it is	Explainers on Islami Bank products, DPS, FDR, sanchayapatra, mobile financial services, bank jobs and freelancing income, with conflicting views labelled.
User need	"Is my bank job, DPS, trading or freelancing income halal?"
Evidence	07 row 14: a Hanafi fatwa separates interest-handling roles from support roles, while al-feqh.com calls all bank work haram (IslamQA.org Darul Iftaa; al-feqh.com); Autocomplete ইসলামী ব্যাংকে টাকা রাখা.
Demand signal	Observed suggestion only; no Trends value.
Competitive gap	4/5 in 07: no BD-context explainer.
Complexity	4/5 in 07.
Long-term value	4/5 in 07.

Field	Detail
Confidence	**Low-Medium.** Size is unmeasured, and it needs the same scholar capacity as rank 13.

18. Ruqyah safety pages

Field	Detail
What it is	A few reviewed pages on self-recitation of masnoon duas, warning signs of fraud and mental-health caveats. They do not broker paid raqis.
User need	"Evil eye, jinn, ruqyah: where do I get help?"
Evidence	03 § New topics: the most video-heavy results page sampled, with 33 YouTube links (Google রুকইয়াহ); documented kabiraj fraud (bdnews24).
Demand signal	Trends relative (রুকইয়াহ 0.005x); Ahrefs range (বদ নজরের দোয়া, dua against the evil eye, >1,000, which rank 3 already covers).
Competitive gap	3/5 in 07: brands exist.
Complexity	2/5 in 07.
Long-term value	3/5 in 07: protective.
Confidence	**Medium.** Low demand, high harm. A small, cheap set once a reviewer is available.

Defer

Rank	Opportunity (07 rank, score)	Why defer	Evidence (report and source)	Demand signal	Confidence
19	Installable offline web app, PWA (15, 17)	**Moved down.** 06 rates offline use Moderate for apps and **Not evidenced for the web**: "a PWA would be an untested bet". The 175 offline/data reviews (61 at 3★ or lower) are mostly about app size. What *is* evidenced is cheap, light pages with audio on demand: data costs BDT 25–35 per GB (Bonik Barta). Treat page weight as a launch quality constraint instead.	06 § Device, bandwidth; 05 § Offline (quran.com sw.js)	User review; audit observation	Medium
20	Audio-first destinations, reciter choice, sleep playlists (18, 15)	YouTube owns listening: youtube.com appeared in 9 of 16 Bing-BD top tens, and 5 of 6 Google pages had a video block. Audio licensing and hosting are not costed. Per-item audio as a pronunciation check moves into rank 2.	03 § A. Quran (YouTube autocomplete)	Observed suggestion; audit observation	Medium
21	Faraid (inheritance) calculator (20, 15)	Small demand (ফারায়েজ 0.004x), complex fiqh plus BD law (Muslim Family Laws Ordinance 1961), and wrong shares cause family harm.	07 (Google ফারায়েজ ক্যালকুলেটর)	Trends relative; observed suggestion	Medium
22	Children's section (21, 15)	"শিশুদের ইসলামিক শিক্ষা" returned no suggestions; parents search names, stories and cartoons instead; content production is costly.	03 § G. Learning (Google শিশুদের ইসলামিক শিক্ষা)	Observed suggestion	Medium
23	Hifz and revision tool (23, 14)	Observed demand only; a niche. **Conflict:** hadithbd has a hifz tracker, but Bing shows only articles and videos for "কুরআন হিফজ করার সহজ উপায়", so the tool exists but is not discoverable.	07 § Where the gaps cluster (Bing কুরআন হিফজ)	Observed suggestion; audit observation	Medium
24	Licensed book library (24, 13)	ইসলামিক বই pdf is 0.002x; distribution is copyright-grey and licensing dominates cost. A print view of the platform's own pages moves into rank 2, because users ask for "লিখিত" (written) and "pdf" forms.	03 § G. Learning (Google ইসলামিক বই pdf)	Trends relative; observed suggestion	Medium

Two smaller items also wait. **Upazila-level times** have Weak evidence (two reviews), so district times are the evidenced default (06). **Exam and homework explainers** ("শিরক কাকে বলে কত প্রকার", what is shirk and how many kinds) are real demand from students and madrasa learners, but 03 and 04 treat them as a separate audience that should not shape the practice experience.

Not supported by evidence

These features are often assumed for a Bangladeshi Islamic product. The research looked and did not find support, or found contrary evidence. They should not enter the roadmap as validated needs. The first ten come from 06 § Assumed needs the evidence did not support; the last three come from 07's low scores and its "not a gap" section.

Assumed feature	What the evidence shows	Source
Accounts and login	Only 51 of 11,671 reviews mention them, mostly lost subscriptions on global apps. None asks for login. Users complain when login or data collection gets in the way.	06 (Play: Deen)
A madhhab picker	Some users reject being asked: "আমরা সবাই মুসলিম" (we are all Muslims). The evidence supports a Hanafi default with the alternative Asr labelled by method.	06 (Play: Ibadah)
Women-specific tools (period tracker, "not praying" mode)	Not requested anywhere in the corpus. Only an access gap is documented (40% of men vs 24% of women use mobile internet; GSMA 2024). Women's fiqh *content* demand is observed.	06 (Dhaka Tribune)
Azan alarms on the web	Alarm failure is the strongest app complaint (263 notification or alarm reviews, 75 at 3★ or lower). A website cannot ring reliably, so this is a reason *not* to promise alarms.	04 (Play: Muslim Bangla)
Daily hadith or ayah push as a return driver	Not directly evidenced in Bangla reviews. "আজকের হাদিস" exists as a query, and notifications draw both requests and nagging complaints.	04 (Autocomplete আজকের হাদিস)
Authenticity checking as a traffic driver	জাল হাদিস is below 100 a month. Sourcing builds trust, not acquisition.	03 (Ahrefs জাল হাদিস)
Bijoy/Unicode font-rendering fixes	No review from 2017 to 2026 complains of broken conjuncts or Bijoy garbling. Font *size* is the real issue (76 font reviews, mostly size). Bijoy is a back-end data-cleaning task.	06
Offline use of a website	Not evidenced for the web (see Defer, rank 19).	06
"Ad-free" as a differentiator against dedicated Islamic sites	Every dedicated Islamic site audited was ad-free; ads appeared only on newspapers and SEO blogs. Ad-free avoids a penalty but earns no advantage against serious Bangla sites.	05 (Jugantor)
Desktop-first users	StatCounter's 56.04% desktop reading conflicts with BTRC's ~89% mobile subscriptions and Android's ~91% mobile OS share; 01 treats it as an artefact.	01
A tasbih counter as a destination	Ahrefs puts "tasbih counter" at >100 (KD Hard) and "online" below 100; "তাসবিহ" mostly means the tasbih recited in salah, and counter queries are mostly device shopping; 47 reviews mention tasbih. Worth building only as a cheap attachment to zikir pages.	03 (Ahrefs tasbih counter)
A better hadith library (browsing Bukhari and Muslim by number)	Well served by hadithbd and ihadis; Google demand is small (বুখারী শরীফ >100, মুসলিম শরীফ >100). The gap is graded topic pages that link into a library.	07 (Bing সহিহ বুখারী বাংলা)
One "simple" colloquial translation	Weak: one high-vote review asks for colloquial over sadhu Bangla, while other reviews contest specific word choices in both directions. The evidence points to named, switchable translations.	06

Shared family phones (two reviews) are also Weak and should not drive features.

Launch quality constraints that are evidenced. These are not opportunities, but the evidence makes them conditions of entry: no ads and no paywall around sacred text; light, text-first pages with audio only on request; a large default font with a size control (Moderate, 76 font reviews); location chosen without requiring GPS ("Please don't make location to GPS only", 146 helpful votes); and no nagging notification or donation prompts (06; Play: Islami Jindegi).

Year-round vs seasonal plan

What earns daily and weekly return

A small set of needs never switches off. Prayer times, dua, Quran, hadith, Islamic names and umrah were searched in every week of five years, with peaks only 1.8–2.8x their own median (dua 5.1x) (08 § Year-round demand). Site traffic confirms that the base is year-round: Ahrefs' modelled organic traffic for hadithbd and muslimbangla rises only about 1.2–1.9x in the Ramadan month (Ahrefs muslimbangla.com).

Rhythm	What carries it	Evidence	Label
Daily, Fajr window	District prayer times, today's BD Hijri date, and one small dua or a few ayat with উচ্চারণ and audio; morning adhkar	Prayer-time searches peak at 04:00–06:00 and dua at 05:00–06:00 (earlier research, Nov 4 2026; one November week, not re-pulled). Users describe daily reading that builds to a khatam ("প্রতিদিন সকালে আমি কুরআন পড়ে... জীবনের প্রথম খতম", reading every morning, my first khatam) (Play: Greentech Al Quran). সকাল সন্ধ্যার দোয়া ও জিকির is >1,000 (Ahrefs range).	Measured (Trends), user review; the pairing is [Inferred]
Daily, Asr to Maghrib	Evening adhkar; prayer times	Second prayer-time peak at 15:00–17:00 (earlier research)	Measured; [Inferred] fit
Daily, after waking	Dream interpretation (strong next, rank 12)	05:00–08:00 peak (earlier research)	Measured
Weekly, Friday	Surah Kahf, Jumu'ah rakat and niyat, khutbah text, sourced Friday greetings	Friday lifts of 25–60x; prayer time +8–20%	Measured
Life events, year-round	Names, aqiqah, janaza and death rites	ইসলামিক নাম 0.52x; আকিকা 0.076x peaking just before Eid-ul-Adha; জানাজার নামাজের নিয়ম ও দোয়া +130% rising (03)	Measured
Annual, every one to two months	The occasion engine	Occasion months in 2026 were January, February, March, May, June and August/September (08)	Measured dates; [Inferred] cadence

There is **no retention or daily-active-user data** for any Bangladeshi Islamic product (04). Everything in this table about what brings users *back* rests on search timing and reviews, not on observed return visits. Notifications cut both ways: users ask for reminders and complain about nagging in roughly equal measure (04).

Acquisition, reactivation and retention are different moments (08). Ramadan week 1 brings the most new users, searching for sehri and iftar times; reviews show Ramadan is when many users first adopt an Islamic app (Play: Quran Majeed). Shab-e-Barat week, when prayer-time searches reached their yearly maximum in 2022, 2023 and 2026, brings lapsed users back. Friday and the daily prayer-time view keep them between occasions. **The quiet season is September to December**, when year-round content and life events must carry engagement and the Q1 cluster is prepared.

A correction to carry forward. Earlier research (Nov 4 2026) called Shab-e-Barat "the single biggest religious spike of the year". Report 08 corrects this: Shab-e-Barat is the biggest *one-night occasion*, level with Ramadan week-1 terms per term (6.3x vs 6.1–7.1x the anchor median) and below "ঈদ" (16.7x) and "দোয়া" (11.1x) at their peaks. Ramadan is the largest *cluster* (08 § Correcting the earlier claim).

2027 seasonal readiness calendar (inferred)

This table is reproduced from 08 § Serving users year-round. **The "content live by" column is inferred** from measured ramp times (searches start only 1–3 weeks before most events, and Shab-e-Barat and Qurbani build over 2–4 weeks). **All 2027 Islamic dates except Bishwa Ijtema and the Hajj roadmap are estimates (±1 day, subject to moon sighting).** No official 2027 holiday list had been found by 5 Nov 2026.

2027 occasion	Expected date in BD	Status of date	Content live by (inferred)	Pages that carry the demand
Shab-e-Meraj	night of about 5–6 Jan	Analyst estimate (no source)	mid-Dec 2026	Date, event history, authenticity of special prayers
Bishwa Ijtema	8–10 and 15–17 Jan	**Official** (Dhaka Times)	mid-Dec 2026	Dates, location, history
Shab-e-Barat	night of about 23 Jan	Estimate (calendar site) (Bangla Date Today)	early Jan 2027	Date and countdown, amal and nafl with grading, virtue hadith with grading
Ramadan begins	about 8–10 Feb	Estimate; **sources conflict** (about 9–10 Feb counted back from Eid; about 8 Feb in Wego's projection, earlier research)	mid-Jan 2027	District sehri and iftar calendars, niyat, duas, tarawih, Ramadan rules
Zakat and fitra	Ramadan weeks 1–4	Follows Ramadan	early Feb 2027	Zakat calculator (BD units, current nisab), IF fitra amount once announced
Laylatul Qadr	night of about 6 Mar	Estimate	late Feb 2027	Qadr dua, nafl guidance with grading
Eid-ul-Fitr	about 10–11 Mar	Estimate	late Feb 2027	Eid prayer method, takbir, "if I join late"
Hajj flights and Hajj	from 8 Apr; Hajj about 15 May	**Official roadmap** (Bangla Tribune)	Mar 2027	Hajj guide, talbiyah with উচ্চারণ, Arafah dua

2027 occasion	Expected date in BD	Status of date	Content live by (inferred)	Pages that carry the demand
Eid-ul-Adha and Qurbani	about 16–17 May	Estimate	late Apr 2027	Qurbani rules, animal age, shares, meat distribution, slaughter dua
Ashura	about 16 Jun	Estimate	early Jun 2027	Ashura fasting dates and virtue
Eid-e-Milad-un-Nabi	about 15–16 Aug	Estimate	early Aug 2027	Date; neutral handling of the permissibility debate
Hajj 2028 registration	likely Jul–Sep 2027	Inferred from the 2026 pattern	Jun 2027	Registration deadline tracker, package explainer

[Inferred] Readiness implication. 08 concludes that a product not live and indexed by mid-December 2026 will miss Shab-e-Barat and Ramadan week 1. The 2027 Ramadan start is the date most in doubt, so 08 advises having Ramadan content ready a week before the earlier estimate. If launch slips past mid-December, the first full seasonal test becomes Eid-ul-Adha in May 2027 and, for the full Q1 cluster, early 2028.

Content and trust policy implications

These are implications of the evidence, framed as research findings for the product owner. They are not design decisions.

Named scholars and reviewers. Users do not trust anonymous answers. They type a person, publication or school into the query (আল কাউসার, শায়খ আহমাদুল্লাহ, মিজানুর রহমান আজহারী, "দলিলসহ", with evidence), and they praise a fast human answer ("২ দিনের ভিতর সঠিক সমাধান পেয়েছি", a correct answer within 2 days) (03 § Seven question templates; Play: Muslim Bangla). The implication is that any ruling, myth-check, dream or women's-fiqh content needs a named, accountable reviewer and a date. hadithbd's machine-generated Q&A is not scholar-reviewed (05). **[Inferred]** Unreviewed machine answers on rulings would contradict the trust signal users are looking for.

References on every item. Reviewers praise "সনদ তেমনই সহীহ" (sahih chains) and "authentic references", and they ask for "references should be more detailed" and links to original books (06 § Trust; Play: IRD Dua). The top-ranking topic-hadith and caption pages carry no reference at all. A reference should survive sharing, because shareable pages (hadith, captions, Friday greetings) are where misattributed text spreads (04 § Lifestyle).

Hadith grading with the grader named. Graders disagree: a reviewer flagged hadith graded Daif by Darussalam but Sahih or Hasan by Albani (Play: Greentech Hadith). ihadis shows "সহিহ হাদিস" without naming the grader. The implication is to name the grader, not just the grade. Shab-e-Barat virtue hadith are debated in Bangladeshi media and peak in one week each year, which makes grading most visible there (08).

Madhhab labelling without forcing a camp. The signal runs three ways: Hanafi users are alarmed by non-Hanafi times ("তাহলে কি এটা শীয়াদের জন্যে", is it for Shias then?), Ahl-e-Hadith users want their own Asr, and some users reject being asked (06). Explicit sectarian reviews are rare (8 of 11,671), but results pages put rival rulings side by side with no labels. The evidence supports a **Hanafi default** for times with the alternative Asr shown and labelled by method, and Q&A that labels differing views by school. It does not support a picker. Two further editorial calls follow from the data: whether to include the Bangladesh Sufi zikir layer (Atroshi, Charmonai and Taheri zikir appear in related queries, and some users object to Sufi content), and how to handle Milad permissibility questions neutrally (04; 08).

No ads and no paywall on core religious text. Ads are the largest complaint theme (551 reviews, 349 at 3★ or lower), framed in moral terms ("নাজায়েজ বিভিন্ন বিজ্ঞাপন", impermissible ads), and 1–2★ shares track ad load (Wemu 41.1%, Muslim Pro 18.9%, Quran Majeed 17.3%, against 2.2% for Muslim Bangla and hadithbd's app). Paywalls draw 185 mentions, 116 at 3★ or lower ("ধর্ম বিক্রি করে খাওয়া বন্ধ করুন", stop making a living by selling religion) (06 § Money and ads; Play: Tafhimul Quran). Donation is accepted (Moderate), but donation that nags or gates content is resented ("My father already donated, yet the reminder never stops").

Verse-level accuracy and a public corrections process. Users audit text word by word (Mulk 17, Yasin's last ayah, Fatir 35:11, Sahih Muslim numbering) and treat one error as a reason to warn others away (06). Bangla-script pronunciation carries a specific liability. The Greentech translation platform itself warns that transliteration "can cause incorrect pronunciation and may hinder the proper learning of Tajweed" (translate.gtaf.org). **[Inferred]** That supports framing উচ্চারণ as a learning aid paired with audio, proofreading it, and correcting it in public.

Bangladesh sources stated, not implied. Users treat the IF as the reference for times, translations and the fitra amount, and the National Moon Sighting Committee as the reference for dates. No site audited cites either for its Hijri date, and the IF publishes no usable timetable online (05). Stating the source on the page is what lets users check a claim of "Islamic Foundation timing".

Popular spelling as the label. Use দোয়া, নামাজ, সূরা, হাদিস, জিকির and কাহাফ as visible labels, with the scholarly spellings as aliases, and give surah pages Latin-script names (03). This is a content-policy choice as much as a search one, because some scholars prefer the other forms.

Risks and open questions for the product owner

1. **Madhhab stance.** The research supports a Hanafi default for prayer times with the second Asr labelled, but it does not settle the platform's stance on Q&A, Shab-e-Barat practices, Milad or Sufi zikir. The two school clusters already compete for the same queries (01 § Landscape). *Decision needed:* a written editorial stance, and who signs it.
2. **Sourcing and licensing.** Translations, tafsir, উচ্চারণ, hadith grading and audio all need rights. hadithbd's content is "সর্বস্বত্ব সংরক্ষিত" (all rights reserved), most licences were not checked, and 07's complexity scores leave out licensing negotiations, "which could dominate the real cost" (07; 05). *Open:* which named translations and graded corpora can be used, and on what terms.
3. **Scholar-review capacity.** Ranks 11–13 and 16–18 all depend on named reviewers, and the proofreading behind ranks 2 and 8 does too. muslimbangla answers at scale (masail IDs above 170,000) with named muftis. *Open:* how many reviewers, from which institutions, with what turnaround.
4. **The IF method is unverified.** The ±9-minute offset conflict is unresolved, and the IF's Fajr/Isha angles and Asr method were not obtained (06; 10 conflict #10). A wrong minute costs trust disproportionately ("I missed my suhoor only because I followed the time on the app"). *Needed before launch:* the IF timetable documents.
5. **Competing with muslimbangla and hadithbd.** They draw an estimated ~905K and ~601K Bangladesh visits a month (Similarweb, September 2026; third-party estimates, ±2–3x across tools) and hold top positions on prayer-time and dua keywords (02). muslimbangla is broad but unsourced; hadithbd is deep but has no prayer times. **[Inferred]** The opening is the combination of breadth and trust, plus Bangladesh correctness, rather than any single feature. The incumbents could close individual gaps quickly; muslimbangla could add dua sources, for example.
6. **Declining Google search and AI answers.** Core terms fell 30–60% between 2023 and 2026, and AI answers appeared on 6 of 6 sampled Google pages. **Evidence conflict:** Ahrefs models muslimbangla's organic traffic growing about twelvefold over the same period (March 2023 to March 2026), which may mean clicks are concentrating on a few winners, or simply that the models differ (01 § Search interest is shrinking). The cause of the decline is not measured. *Implication:* an SEO-led plan carries structural risk, and interactive, verifiable and habitual value is the hedge.
7. **Launch timing.** Report 08 infers mid-December 2026 as the readiness date for the Q1 2027 cluster, and the 2027 Ramadan start differs by one to two days between sources. *Decision needed:* what minimum set can be live, proofread and indexed by then.
8. **Web vs app.** Apps are the habit layer (Greentech Al Quran 14.7M installs, kutblog 8.67M, Muslim Bangla 5.99M; global device-level counts), and nearly all user voice in this research comes from app reviews (01). A website cannot ring an azan. *Open:* whether web-only users want what app reviewers want.
9. **Unmeasured channels.** Facebook, YouTube and TikTok, where captions, waz, women's questions and ruqyah demand probably concentrate, were not measured (10 § Limitations). Demand for opportunities 15, 16 and 18 may be understated.
10. **Women users.** The mobile-internet gender gap is wide (40% vs 24%, or 26% in a later comparison), and women's voices are faint in the corpus. *Open:* validate women's needs directly before building for them, rather than assuming features (06 § Conclusion).
11. **Noise in keyword planning.** Head terms are polluted (Latin "dua" by Dua Lipa, "doa" by a university admissions portal, "আমল" by the amla fruit), and some suggestions carry India or West Bengal intent (03 § Noise filters). Any content plan built from the keyword database has to filter these rows first.

Confidence and limitations

High confidence applies to the existence and shape of the needs (each is backed by queries, reviews or both), to the directly observed competitive gaps (search tests, Asr and Hijri divergence, missing provenance), and to the shape of the seasonal calendar. **Medium confidence** applies to the relative ordering of opportunities. It rests on 07's analyst scores, which weight five dimensions equally by choice, plus this report's re-ordering rules, which are also analyst judgement. Another reasonable weighting would reorder ranks 6–18, though the cluster of trust, Bangla-language and BD-correctness items at the top is consistent across 03, 04, 05, 06 and 07. **Low confidence** applies to any absolute size. No exact search volume exists anywhere in this research: Ahrefs figures are third-party modelled buckets or site-page estimates, Trends is relative and exact-phrase only, and autocomplete shows existence, not volume (10 § Evidence taxonomy).

Several limits affect this report specifically. There is no retention, daily-active-user or first-party traffic data, so "daily return" claims rest on search timing and app reviews. User voice is almost entirely from Google Play app reviews (11,671 reviews of 22 apps, not a random sample, reviewer location unverified), so website-only users, iOS users and non-reviewers are absent. Complexity scores exclude licensing. Native apps, logged-in features and translation quality were not audited. The Friday opportunity (rank 10) has measured demand but no competitive-gap assessment. Hourly patterns come from earlier research (Nov 4 2026) covering one non-Ramadan week. All 2027 Islamic dates except Ijtema and the Hajj roadmap are estimates. Methods, tools, blocked sources and the full conflict log are in 10-research-methodology-and-sources.md.

CHAPTER 10

How this research was built, and where it breaks

ABOUT THIS CHAPTER

In plain words. This chapter explains exactly how the research was done, so anyone can judge how far to trust it or repeat it. It lists every tool used, what each could and could not do, which sources were blocked, every conflict found in the evidence, the main limitations, the raw data files, and a register of about 80 sources.

Key takeaway. There are **no exact search volumes anywhere in this research**. The closest are Ahrefs ranges for 136 keywords. Everything else is relative (Google Trends), proof of existence (autocomplete), observation (results pages and the website audit) or user voice (reviews). Some Google results pages came from a signed-in browser in Bangladesh and may be personalised.

Why it matters for the product. Before making a big bet on a number in this report, check its source and confidence here. The conflict list shows where the evidence disagrees and how each conflict was handled.

How to use this chapter. Use the source register to find any original source. Use the raw data files (in the data/raw folder next to this PDF) to re-run or extend the analysis.

Key findings

- **Six workstreams ran in parallel on 2026-11-05.** They built on an app-market study completed the day before (from earlier research, Nov 4 2026). The six were:
- top websites and market;
- competitor feature audit;
- user voice and Bangladesh requirements;
- seasonal search trends;
- Quran/hadith/dua keywords;
- namaz/Q&A/Ramadan/learning/lifestyle keywords.
- **What worked:** Google Trends' widget API, Google Autocomplete (712 + 267 seed queries with no failures), Similarweb and Ahrefs free pages, a headless browser audit, and a direct Google Play scrape. The scrape yielded **11,671 reviews of 22 apps**.
- **What was blocked:** Semrush and Google Keyword Planner keyword data (login required), PageSpeed Insights (HTTP 429), Reddit (domain blocked to tools), Google search after 6 automated queries (CAPTCHA), DuckDuckGo after 2 queries, and several Trends sets (HTTP 429).
- **No exact search volumes exist anywhere in this research.** The only "measured_volume" rows are **Ahrefs modelled buckets** (<100, >100, >1,000, >10,000) for 136 keywords. Everything else is relative (Trends), existence-only (Autocomplete), observational (search results pages, the audit) or qualitative (reviews).
- **Some search results pages came from a signed-in Chrome session in Bangladesh.** Those 34 Google results pages may be personalised. Six others came from an automated Bangladesh-IP browser, and the audit's ranking checks came from a non-Bangladesh IP.
- **About 20 evidence conflicts are logged below.** The largest:
- traffic tools disagreeing by 2–3× on the same site;
- DataReportal's 82.8M users vs BTRC's 135.94M subscriptions;
- StatCounter's desktop majority vs ~89% mobile subscriptions;
- Trends decline vs Ahrefs growth;
- sites disagreeing on Asr, Hijri and Bangla dates;
- the IF district-time method.
- **The raw data is preserved in** `docs/research/data/`: `keyword-database.csv` (934 rows) and 16 raw files covering autocomplete, Trends, search results and Play reviews. It can be re-analysed without re-scraping.

Research question, plan and phases

The question was: *what do Bangladeshi Muslims want from Islamic websites?* That breaks into which sites they use, what they search for, which features they value, and which problems remain unsolved. The aim is to plan a Bangladesh-focused Islamic web platform. The work ran in four phases.

Phase 0, prior work (from earlier research, Nov 4 2026). An app-market study covered Bangladeshi and global Islamic apps, user sentiment, market gaps, and web platforms and data. It is stored as `reports/Islamic apps Bangladesh market.md` with notes in `research_notes/Islamic apps Bangladesh market/`. Its limitation was that review evidence was "a small, mostly iOS sample". That prompted the Play scrape in Phase 1. Where Phase 1 notes disagree with Phase 0, Phase 1 wins. Phase 0 figures reused in the reports are labelled "from earlier research, Nov 4 2026".

Phase 1, six parallel workstreams (2026-11-05). Each produced a notes file in `research_notes/Bangladesh Islamic web search demand/`:

Workstream	Notes file	Main methods	Main outputs
Top websites and market	`top_websites_and_market.md`	Similarweb and Ahrefs free pages; DataReportal, BTRC (via news), BBS, StatCounter	Ranking of 11 Bangla sites and 2 global benchmarks; market context
Competitor feature audit	`competitor_feature_audit.md`	curl, WebFetch, headless Chromium (390×844), API calls	33-feature × 14-site matrix; search, Asr and Hijri tests
User voice and BD requirements	`user_voice_and_bd_requirements.md`	`google-play-scraper` v1.2.7 (BD storefront); news and academic sources	11,671 reviews; theme counts; quotes
Seasonal search trends	`seasonal_search_trends.md`	Trends widget API (5-year weekly, 90-day daily); Autocomplete; national media for dates; Ahrefs site history	Seasonal calendar; 2026 actual and 2027 planning dates
Keywords: Quran, hadith, dua	`keywords_quran_hadith_dua.md` + `.csv` (352 rows)	Ahrefs keyword generator (30 seeds); Trends; Autocomplete (175 Bangla + 92 English seeds; 12 YouTube seeds); Google (6), Bing (16) and DDG (2) results pages	Volume buckets; spelling variants; results-page quality checks
Keywords: namaz, Q&A, Ramadan, learning, lifestyle	`keywords_namaz_qa_ramadan_learning_lifestyle.md` + `.csv` (582 rows)	Autocomplete (712 seeds, 2 rounds); Trends 12-month (some sets blocked); 34 Google results pages in a signed-in Chrome	Query templates; relative demand; results-page fragmentation

Phase 2, consolidation. The two keyword CSVs were merged into `docs/research/data/keyword-database.csv`, and raw scratch outputs were copied into `docs/research/data/raw/`. Details are under "Raw data files" below.

Phase 3, synthesis. The notes were turned into the numbered reports (01–10) and a README. This file documents the method. The market overview, site ranking, feature analysis and user needs are in 01, 02, 05 and 06. Search demand is in keyword research, with search intent, content and feature gaps and seasonal trends in their own reports.

Tools used, and what each could and could not do

Tool	Used for	Outcome	Consequence
Similarweb free pages	Visits, BD share, BD rank, top channel, keywords, competitors	**Partial.** Worked for 13 domains plus prothomalo.com. Top pages and the full channel split are paywalled. Traffic-source percentages are **desktop-only**. The "Total Visits" label is ambiguous (1 month vs 3 months). The BD Faith & Beliefs category page returned **404**. In the seasonal workstream, curl to similarweb.com/website/ihadis.com/ returned **HTTP 202 with an empty body**	Rank order is usable; absolute volumes are ±2–3×
Ahrefs free pages (ahrefstop.com, ahrefs.com/websites)	Organic traffic, BD organic share, keyword positions, monthly history	Worked for muslimbangla, hadithbd, ihadis and islamhouse	Organic only; modelled
Ahrefs Free Keyword Generator (country=bd)	Volume buckets and difficulty (KD) for about the first 10 ideas per seed	Worked for 28 of 30 seeds; "dua" and "dua for" returned no rows	The only volume data available; buckets, not counts

Tool	Used for	Outcome	Consequence
Semrush	Site overview	One muslimbangla.com page (September 2026, 2.05M) plus an older Polish-locale snapshot; keyword data **login-gated**	Conflicts with Similarweb
Google Keyword Planner, Ubersuggest, keywordtool.io	Exact volumes	**Login required or rendered client-side**; not obtained	No exact volumes anywhere
Google Trends (explore → widgetdata/multiline API)	Relative interest, geo=BD	**Worked.** 5-year weekly, 12-month weekly and 90-day daily pulls succeeded. The homepage returned 429. In the namaz workstream, sets g4 (Islamic vs English names), g6 (Hajj package / Umrah / registration), g13, g14 and g15 failed with **HTTP 429**	Relative only; small terms round to 0
Google Autocomplete (suggestqueries, gl=bd)	Which queries exist	**Worked.** 712 seeds with 0 failures (namaz workstream); 175 Bangla + 92 English seeds (Quran/hadith/dua workstream); 12 YouTube seeds (ds=yt)	Existence, not volume; one IP, one day
Google results pages	Who ranks; AI answers; YouTube blocks; People Also Ask	Quran/hadith/dua workstream: **6 queries, then CAPTCHA**. Namaz workstream: **34 queries in the user's own Chrome in Bangladesh, signed in, so possibly personalised**. Feature audit: headless browser with `gl=bd&hl=bn` but a **non-BD client IP**	Small, non-rank-tracked sample
Bing (cc=BD)	Proxy for Google rankings; page-quality checks	16 results pages parsed in one workstream; **returned nothing parseable** in the other	A proxy, not Google
DuckDuckGo (kl=bd-en)	Cross-engine check	**2 queries, then blocked (HTTP 403)** in both workstreams	Minimal
PageSpeed Insights API	Mobile performance scores	**HTTP 429**, daily quota exceeded for the unauthenticated key	No PSI/LCP scores; headless LCP used as a rough proxy only
Headless Chromium (Playwright, 390×844)	Feature audit; rendering Cloudflare-protected sites	Worked. The browser was shared with another agent; **one navigation was hijacked and discarded**, and other results were checked against `location.href`	Reliable for presence and absence of features
curl / WebFetch	Fetching pages	hadithbd (Cloudflare challenge) and sunnah.com returned 403 to WebFetch; the IF site has a broken TLS chain; Jugantor and Daily Sun pages returned 403	Some facts rest on search snippets (flagged)
google-play-scraper v1.2.7	Play reviews (country=bd; lang bn and en; NEWEST and MOST_RELEVANT sorts)	**Worked.** Up to ~650 unique reviews per app; 11,671 in total	The main user-voice source
Reddit	User discussion	**Blocked** ("domains not accessible" from WebSearch and WebFetch)	No Reddit evidence
Facebook groups, YouTube comments	User discussion	Not publicly retrievable	The biggest gap in the user voice
WebSearch	Locating sources	US-geolocated	Not used for Bangladesh rankings

Evidence taxonomy

Every keyword row and every claim in the reports belongs to one of these classes. The first four are the `evidence_type` values in `keyword-database.csv`.

Evidence type	Rows in keyword DB	Source	What it means	What it does not mean
`measured_volume`	136	Ahrefs Free Keyword Generator, Google, country=BD	A **third-party modelled** monthly volume **bucket** (<100 / >100 / >1,000 / >10,000), with KD (Easy/Medium/Hard) for ~100 rows	Not exact volume; not Google data. "Measured" is the label used in the CSV; the figure is modelled
`trends_relative`	157	Google Trends, geo=BD, anchored to "নামাজের সময়" (prayer time)	Relative interest; a ratio to the anchor (52-week mean or 5-year median)	Not volume. Exact phrase only. Small terms round to 0

Evidence type	Rows in keyword DB	Source	What it means	What it does not mean
`observed_suggestion`	594	Google and YouTube Autocomplete, gl=bd	The query exists and is common enough to be suggested in Bangladesh	No volume. Personalised and IP-sensitive
`serp_observation`	47	Google, Bing or DDG results pages	Who ranks; which results-page features appear; heuristic page checks	Not a rank audit. Bing is a proxy
qualitative: genuine user text	—	Verbatim Play reviews	A real user said this	Not representative; location unverified
qualitative: secondary	—	News, industry and academic reports	The cited outlet reported this	Not independently verified by us
own data	—	Our counts over the review corpus	Keyword-matched theme frequencies	Indicative only
modelled traffic	—	Similarweb, Ahrefs, Semrush site estimates	Third-party model output	Not analytics
direct observation	—	The feature audit	Seen on the page on 2026-11-05	Absence is "not found", not proof of absence
inference	—	Researcher or writer reasoning	Labelled as inferred in every report	Not evidence

Ahrefs **site pages** (ahrefstop.com) show exact-looking per-keyword volumes, for example 37K for নামাজের সময়সূচি (prayer schedule). These are also **model outputs**, and they are more granular than the keyword generator's buckets. The reports cite them as Ahrefs estimates, never as Google counts.

Confidence levels

- **High:** a primary or official source, or two independent sources agreeing. Examples: the census Muslim share, Eid dates, features directly observed on a page, a verbatim review quote.
- **Medium:** a single reputable secondary source or a single modelled tool, used for direction or order. Examples: Similarweb rank order, Ahrefs buckets, Trends direction.
- **Low:** a single modelled figure with known conflicts, a search snippet, a low-authority source, or a tiny sample. Examples: absolute visits, salat.habibur.com's geography, the Deshrupantor iftar times.
- **Inference:** reasoning from evidence. It is always labelled and never presented as a finding.

Conflicting evidence

#	Conflict	Side A	Side B	Resolution used in the reports
1	Similarweb "Total Visits" period	Single month (Sept 2026)	Three-month total	Treated as one month; divide by 3 if wrong (02)
2	muslimbangla.com volume	SW 958.2K total; ~508K implied organic	Ahrefs 255.5K organic; Semrush 2.05M total (+143% m/m); Semrush Nov 2025 ~142.9K	Rank used; volume flagged Medium
3	hadithbd.com organic	SW-implied ~467K	Ahrefs 183K	As above
4	ihadis.com	SW total 206.7K, 46.84% BD	Ahrefs organic 405K, 36% BD, Turkey spike	Medium-Low; Ahrefs likely inflated by a non-Bangla keyword spike
5	hadithbd bounce rate	71.81% (SW, April 2026; earlier research)	47.36% (SW, now)	Unresolved: methodology or real change
6	Top-site organic	Earlier research: "~255K each" for hadithbd and muslimbangla	Now 183K and 255.5K	Newer notes win
7	Internet reach	DataReportal 82.8M users (47%)	BTRC 135.94M subscriptions; BBS 59.2% individual use (earlier research)	People vs SIMs; 82.8M used for audience (01)

#	Conflict	Side A	Side B	Resolution used in the reports
8	Device mix	StatCounter desktop 56.04%	BTRC ~89% mobile subscriptions; Android ~91%	StatCounter treated as an artefact
9	Search trend	Trends: most terms −30 to −60% (2023→2026)	Ahrefs: muslimbangla organic ~12× growth (Mar 2023→Mar 2026)	Both reported; concentration or model difference
10	District time derivation	±9 min from Dhaka (Ittefaq 2026); +11/−10 (2021–23)	IF calls the offset method "baseless" and publishes per-district schedules (Jugantor snippet; page 403)	Unresolved; verify against an IF document
11	Asr, Dhaka, 5 Nov 2026	ihadis 2:54 PM	muslimbangla and salat.habibur 3:41–3:42 PM	Shafi'i vs Hanafi; both reported (05)
12	Hijri, 5 Nov 2026	BD sites: 24 Jumada al-Awwal	islamqa: 25	Consistent with the BD one-day lag
13	Bangla date, 5 Nov 2026	ihadis: 21 Kartik	muslimbangla: 20 Kartik	20 likely correct under the revised calendar; not officially verified
14	Data price, 2023	$0.23/GB	$0.70/GB	Unresolved (search snippets); 2024 BDT 25–35/GB used
15	Women's mobile internet adoption	24% (GSMA 2024 via Dhaka Tribune)	26% (later comparison)	Both reported
16	Mobile speed	23.85–28.26 Mbps (Ookla 2024–25 news)	41.72 (Nov 2025 snippet); 36.84 (DataReportal)	Range reported
17	Small-term demand	Trends: সকাল সন্ধ্যার দোয়া (morning/evening dua) ≈ 0× anchor	Ahrefs: সকাল সন্ধ্যার দোয়া ও জিকির (… and zikir) >1,000/month	A Trends resolution limit, not a contradiction
18	Tool access	Similarweb pages fetched (top-websites workstream); Bing parsed 16 results pages	Similarweb HTTP 202 empty (seasonal workstream); Bing nothing parseable (namaz workstream)	Different clients and times; noted
19	Translation preference	"ইসলামিক ফাউন্ডেশন এর অনুবাদ দিলে আরো ভালো হতো" ("the Islamic Foundation translation would be better", kutblog review)	IF's 'মহাপরাক্রান্ত' rendering criticised (Technobd review)	Supports offering named, switchable translations
20	Dead vs live	hadith.one timed out twice in the audit	hadith.one ranks on Bing-BD for "hadith bangla"	Status uncertain
21	Ahrefs month stamps	Ramadan 2025 was in March	Ahrefs high labelled April 2025	Likely a month-stamping lag; month of peak treated as approximate
22	Census figure	91.04% Muslim (preliminary)	91.08% (final)	Final used; both cited

Limitations

The research has no first-party analytics, no exact search volumes, and no direct web-user research such as interviews, surveys or usability tests. All user voice is from **app** reviews, which over-represent Android users who review. Location is unverified, so we lean on Bangla-script reviews. Facebook and YouTube, where much Bangladeshi Islamic discussion likely happens, were out of reach. Google results pages are a few dozen snapshots from one day and one or two IPs, and some came from a signed-in session. Autocomplete and Trends come from a single day (2026-11-05, off-season for most occasions). Logged-in features, native apps and translation quality were not audited. Several facts rest on search snippets and are flagged where used. Many sites were not fetched for traffic; report 02 lists them.

Raw data files

All files live under `D:/My Projects/daily-islam/docs/research/data/`. They were copied from the session scratchpad, which is temporary. Sizes are as of 2026-11-05.

Path	Size	Contents
`keyword-database.csv`	483 KB	**934 rows**, the concatenation of the Quran/hadith/dua CSV (352 rows) and the namaz/Q&A/Ramadan/learning/lifestyle CSV (582 rows). It holds 920 distinct keyword strings; 14 keywords appear in more than one row, usually under different evidence types or categories. Columns: `keyword, language, intent, search_volume, keyword_difficulty, competition, trend, seasonality, user_need, content_opportunity, data_source, evidence_type, category, subcategory`. Evidence types: observed_suggestion 594, trends_relative 157, measured_volume 136, serp_observation 47. Languages: Bangla 759, English 83, Banglish 66, Mixed 26. Categories A–H plus X (new topics). `search_volume` is filled only for the 136 Ahrefs-bucket rows (e.g. ">1,000 (Ahrefs BD est.)"); 832 rows have KD "n/a"
`raw/play-reviews/reviews.json`	4.8 MB	A dict keyed by 22 Play package names (e.g. `com.tos.namajtime`); each entry has `meta` (installs, rating, ads/IAP flags) and `reviews`. **11,671 reviews** in total
`raw/seasonal-trends/out5y.json`	91 KB	6 Trends request sets, 5-year weekly (`t`, `v` series); each set includes the anchor "নামাজের সময়" (prayer time)
`raw/seasonal-trends/out5y_b.json`	61 KB	4 more 5-year weekly sets (রোজা/fasting, hajj/umrah, দোয়া/dua, ঈদ/Eid groups)
`raw/seasonal-trends/out90d.json`	4 KB	1 set, 90-day daily (Friday terms: জুমার নামাজ / Jumu'ah prayer, সূরা কাহফ / সূরা কাহাফ / Surah Kahf)
`raw/seasonal-trends/groups.json`, `g2.json`, `g3.json`	<1 KB	The term groupings used for the requests
`raw/keywords-quran-hadith-dua/ac_raw.json`	139 KB	Autocomplete results for 267 seeds, keyed `bn|<seed>` / `en|<seed>`
`raw/keywords-quran-hadith-dua/qhd_trends_out.json`	29 KB	24 Trends sets with `terms, timeframe, mean_all, mean_last52, by_year, peak`
`raw/keywords-quran-hadith-dua/yt_ac.txt`	6 KB	YouTube autocomplete, 12 seeds, one line per seed (`yt|<seed> => s1 | s2 …`)
`raw/keywords-namaz-qa-etc/round1.json`, `round2.json`	192 KB, 234 KB	Autocomplete for 329 + 383 = **712 seeds**, keyed `<category>|<seed>`
`raw/keywords-namaz-qa-etc/trends_out.json`	17 KB	16 Trends 12-month sets with `terms, means, peaks, related`

Path	Size	Contents
`raw/keywords-namaz-qa-etc/trends_out2.json`, `trends_out3.json`	7 KB, 8 KB	Retry sets. g4, g6, g13, g14 and g15 record `HTTP Error 429`
`raw/keywords-namaz-qa-etc/serp_out.json`	16 KB	DuckDuckGo/Bing fetch attempts for 30 queries (DDG results for 6, Bing for 4). **The 34 Google results pages from the signed-in Chrome session are recorded only in the notes and CSV, not as raw HTML**

Source register

All sources were accessed **2026-11-05** unless marked "2026-11-04 (earlier research)". "Primary" means the originator of the data or direct observation of the site; "secondary" means a report about someone else's data.

Conclusion

The research rests on many weak signals that point the same way, rather than on a few strong ones. Rank order, keyword themes, search-results gaps and user complaints agree with each other; absolute traffic and search volumes do not, and should not be quoted as facts. The most valuable next steps are the measurements this round could not reach:

- Keyword Planner or Semrush exact volumes, using a logged-in account.
- The IF timetable PDFs and calculation parameters.
- A non-personalised, rank-tracked Google sample from Bangladesh.
- Direct research with Bangladeshi web users, including women.
- First-party analytics once a site is live.

Confidence & limitations

- **High** confidence in what this file documents: which tools ran, what was blocked, and what the data files contain. File sizes, row counts and evidence-type counts were re-checked against the files on 2026-11-05.
- The source register is compiled from the six Phase 1 notes files and the Phase 0 report. It groups repeated sources, such as the 22 Play listings and the Similarweb domains, under a URL pattern. Individual URLs appear inline in reports 01–06.
- The keyword CSV merge removed rows that were exact duplicates on keyword plus category, ignoring case. No such duplicates existed, so all 934 input rows were kept. 14 keyword strings appear in more than one category, for example দোয়া under Dua and under New topics. Those rows were kept on purpose because each carries a different category and user need. Near-duplicates, such as the same keyword with different spacing, were not merged.
